

UNIVERSITY OF CALICUT

Abstract

General & Academic IV - Faculty of Science - Scheme and Syllabus of BSc Biochemistry Honours Programme-in tune with the CUFYUGP Regulations 2024, with effect from 2024 Admission onwards - Approved-Subject to ratification by the Academic Council-Implemented- Orders Issued

G & A - IV - J			

U.O.No. 9578/2024/Admn

Dated, Calicut University.P.O, 19.06.2024

Read:-1. U.O.No. 3103/2024/Admn dated 22/02/2024.

2. Minutes of the meeting of the Board of Studies in Biochemistry (single board) held on 14/03/2024.

- 3. Remarks of the Dean, Faculty of Science dated 14/06/2024.
- 4. Orders of the Vice Chancellor in the file of even No and dated 15/06/2024.

<u>ORDER</u>

- 1. The Regulations of the Calicut University Four Year UG Programmes (CUFYUGP Regulations 2024) for Affiliated Colleges, have been implemented with effect from 2024 admission onwards, vide paper read as (1).
- 2. The Board of Studies in Biochemistry (single board) in the meeting held on 14/03/2024, vide paper read as (2), has approved the Scheme and Syllabus of BSc Biochemistry Honours Programme in tune with CUFYUGP Regulations 2024 with effect from 2024 admission.
- 3. The Dean, Faculty of Science vide paper read as (3), has approved the minutes of the meeting of Board of Studies in Biochemistry (single board) held on 14/03/2024.
- 4. Considering the urgency, the Vice Chancellor has approved the minutes of the meeting of Biochemistry (single board) held on 14/03/2024 and accorded sanction to implement the Scheme and Syllabus of BSc Biochemistry Honours Programme in tune with CUFYUGP Regulations 2024 with effect from 2024 admissions, subject to ratification by the Academic Council.
- 5. The Scheme and Syllabus of BSc Biochemistry Honours Programme in tune with CUFYUGP Regulations 2024, is thus implemented with effect from 2024 admission, subject to ratification by the Academic Council.

Orders are issued accordingly. (Syllabus appended)

UNIVERSITY OF CALICUT

B.Sc. BIOCHEMISTRY HONOURS (MAJOR, MINOR AND GENERAL FOUNDATION COURSES)

SCHEME & SYLLABUS w.e.f. 2024 admission onwards

(CUFYUGP Regulations 2024)

B.Sc. BIOCHEMISTRY HONOURS (MAJOR, MINOR AND GENERAL FOUNDATION COURSES)

SCHEME

PROGRAMME OUTCOMES (PO): At the end of the graduate programme at Calicut University, a student would:

PO1	Demonstrate a profound understanding of knowledge trends and their impact on the	
PUI	chosen discipline of study.	
PO2	Become a team player who drives positive change through effective communication,	
102	collaborative acumen, transformative leadership, and a dedication to inclusivity	
PO3	Demonstrate professional skills to navigate diverse career paths with	
105	confidence and adaptability.	
PO4	Demonstrate proficiency in varied digital and technological tools to understand and	
104	interact with the digital world, thus effectively processing complex information.	
	Emerge as an innovative problem-solver and impactful mediator, applying scientific	
PO5	understanding and critical thinking to address challenges and advance sustainable	
	solutions.	
	Become a responsible leader, characterized by an unwavering commitment to human	
PO6	values, ethical conduct, and a fervent dedication to the well-being of society and the	
	environment.	
	Emerge as a researcher and entrepreneurial leader, forging collaborative partnerships	
PO7	with industry, academia, and communities to contribute enduring solutions for local,	
	regional, and global development.	

PROGRAMME SPECIFIC OUTCOMES (PSO): At the end of the BSc Biochemistry Honours programme at Calicut University, a student would:

	Demonstrate the core concepts in Biochemistry and thereby get expertise in modern biology	
	Get instilled with basic qualities of scientific thinking and questioning through exercises that inculcate critical thinking and problem solving capabilities and can open up venues for innovative outcomes	
PSO3	Get inculcated with interdisciplinary approaches, collaborative learning and developing interpersonal skills with effective communication and presentation skills	
	Be competent and confident for various research, industry as well as academic careers in the field of biochemistry through the professional skills acquired through the programme	
PSO5	Face the global arena and become desirable human resources in the field of academia and industry.	

PSO6 Get sensitized of their social responsibility and become skilful problem solvers to assist the society during various societal challenges such as pandemic/ disaster management, etc. and also be able to provide sustainable solutions to social and environmental problems

MINIMUM CREDIT REQUIREMENTS OF THE DIFFERENT PATHWAYS IN THE THREE-YEAR PROGRAMME IN CUFYUGP

Sl. No	Academic Pathway		Minor/ Other Disciplines ourse has redits	Foundation Courses AEC: 4 MDC: 3 SEC: 3 VAC: 3 Each course	Intern -ship	Total Credits	Example
1	Single Major (A)	68 (17 courses)	24 (6 courses)	has 3 credits 39 (13 courses)	2	133	Major: Biochemistry+ six courses in different disciplines in different combinations
2	Major (A) with Multiple Disciplines (B, C)	68 (17 courses)	12 + 12 (3 + 3 = 6 courses)	39 (13 courses)	2	133	1-Major: Biochemistry+ Chemistry and Nutrition Or Chemistry and Microbiology
3	Major (A) with Minor (B)	68 (17 courses)	24 (6 courses)	39 (13 courses)	2	133	Major: Biochemistry Minor: Chemistry or Nutrition or Microbiology
4	Double Major (A, B)	A: 48 (12 courses) B: 44 (11 courses)	are distribut Majors. 2 MDC, 2 Internship si	12 + 18 + 9 its in the Mino ted between SEC, 2 VAC hould be in M in Major A shou 0% of 133)	the two and the Iajor A.	133	Biochemistry and Chemistry or Microbiology double major

1 MDC, 1 SEC and 1 VAC should be in Major B. Total credits in Major B should be 44 + 9 = 53 (40% of 133)	

Exit with UG Degree / Proceed to Fourth Year with 133 Credits

To continue to study Biochemistry in semesters 7 and 8, batch B1(A2) needs to earn additional 15 credits in Biochemistry to make the total credits of 68. Suppose this condition is achieved, and the student of batch B1(A2) proceeds to the next semesters to study Biochemistry. The course structure in semesters 7 and 8 is the same as for pathways 1 - 4, except that the number of the core and elective courses is in continuation of the number of courses in the two categories completed at the end of semester 6, taking into account the number of courses in Biochemistry taken online to earn the additional 15 credits.

The course code of the same course as used for the pathways 1-4

EVALUATION SCHEME

- 1. The evaluation scheme for each course contains two parts: internal evaluation (about 30%) and external evaluation (about 70%). Each of the Major and Minor courses is of 4-credits. It is evaluated for 100 marks, out of which 30 marks is from internal evaluation and 70 marks, from external evaluation. Each of the General Foundation course is of 3-credits. It is evaluated for 75 marks, out of which 25 marks is from internal evaluation and 50 marks, from external evaluation.
- **2.** The 4-credit courses (Major and Minor courses) are of two types: (i) courses with only theory and (ii) courses with 3-credit theory and 1-credit practical.
 - In 4-credit courses with only theory component, out of the total 5 modules of the syllabus, one open-ended module with 20% content is designed by the faculty member teaching that course, and it is internally evaluated for 10 marks. The internal evaluation of the remaining 4 theory modules is for 20 marks.
 - In 4-credit courses with 3-credit theory and 1-credit practical components, out of the total 5 modules of the syllabus, 4 modules are for theory and the fifth

module is for practical. The practical component is internally evaluated for 20 marks. The internal evaluation of the 4 theory modules is for 10 marks.

3. All the 3-credit courses (General Foundational Courses) in Biochemistry are with only theory component. Out of the total 5 modules of the syllabus, one open-ended module with 20% content is designed by the faculty member teaching that course, and it is internally evaluated for 5 marks. The internal evaluation of the remaining 4 theory modules is for 20 marks.

Sl. No.	Nature of the Course		Internal Evaluation in Marks (about 30% of the total)		External Exam on 4 modules	Total Marks
			Open-ended module / Practical	On the other 4 modules	(Marks)	
1	4-credit course	only theory (5 modules)	10	20	70	100
2	4-credit course	Theory (4 modules) + Practical	20	10	70	100
3	3-credit course	only theory (5 modules)	5	20	50	75

1. MAJOR AND MINOR COURSES

1.1. INTERNAL EVALUATION OF THEORY COMPONENT

Sl. No.	Components of Internal Evaluation of Theory	Internal Marks for the Theory Part of a Major / Minor Course of 4-credits			edits
	Part of a Major / Minor Course	Theory	Only	Theory -	+ Practical
		4 Theory Modules	Open-ended Module	4 Theory Modules	Practical
1	Test paper/	10	4	5	-
	Mid-semester Exam				
2	Seminar/ Viva/ Quiz	6	4	3	-
3	Assignment	4	2	2	-
		20	10	10	20^{*}
Total		30		30	

^{*} Refer the table in section 1.2 for the evaluation of practical component

1.2. EVALUATION OF PRACTICAL COMPONENT

The evaluation of practical component in Major and Minor courses is completely by internal evaluation.

- Continuous evaluation of practical by the teacher-in-charge shall carry a weightage of 50%.
- The end-semester practical examination and viva-voce, and the evaluation of practical records shall be conducted by the teacher in-charge and an internal examiner appointed by the Department Council.
- The process of continuous evaluation of practical courses shall be completed before 10 days from the commencement of the end-semester examination.
- Those who passed in continuous evaluation alone will be permitted to appear for the end-semester examination and viva-voce.

The scheme of continuous evaluation and the end-semester examination and viva-voce of practical component shall be as given below:

Sl. No.	Evaluation of Practical Component	Marks for	Weightage
	of Credit-1 in a Major / Minor Course	Practical	
1	Continuous evaluation of practical/ exercise	10	50%
	performed in practical classes by the students		
2	End-semester examination and viva-voce to be	7	35%
	conducted by teacher-in-charge along with an		
	additional examiner arranged internally by the		
	Department Council		
3	Evaluation of the Practical records submitted for the	3	15%
	end semester viva-voce examination by the teacher-in-		
	charge and additional examiner		
	Total Marks	20	

1.3. EXTERNAL EVALUATION OF THEORY COMPONENT

External evaluation carries 70% marks. Examinations will be conducted at the end of each semester. Individual questions are evaluated in marks and the total marks are converted into grades by the University based on 10-point grading system (refer section 5).

	Туре	Total No. of	No. of	Marks for	Ceiling
Duration			Questions to be	Each	of
		Questions	Answered	Question	Marks
	Short Answer	10	8-10	3	24
2 Hours	Paragraph/ Problem	8	6-8	6	36
	Essay	2	1	10	10
				Total Marks	70

PATTERN OF QUESTION PAPER FOR MAJOR AND MINOR COURSES

2. INTERNSHIP

- All students should undergo Internship of 2-credits during the first six semesters in a firm, industry or organization, or training in labs with faculty and researchers of their own institution or other Higher Educational Institutions (HEIs) or research institutions.
- Internship can be for enhancing the employability of the student or for developing the research aptitude.
- Internship can involve hands-on training on a particular skill/ equipment/ software. It can be a short project on a specific problem or area. Attending seminars or workshops related to an area of learning or skill can be a component of Internship.
- A faculty member/ scientist/ instructor of the respective institution, where the student does the Internship, should be the supervisor of the Internship.

2.1. GUIDELINES FOR INTERNSHIP

- 1. Internship can be in Biochemistry or allied disciplines.
- 2. There should be minimum 60 hrs. of engagement from the student in the Internship.
- 3. Summer vacations and other holidays can be used for completing the Internship.
- 4. In BSc. Biochemistry Honours programme, institute/ industry visit or study tour is a requirement for the completion of Internship. Visit to minimum one national research institute, research laboratory and place of scientific importance should be part of the study tour. A brief report of the study tour has to be submitted with photos and analysis.
- 5. The students should make regular and detailed entries in to a personal log book through the period of Internship. The log book will be a record of the progress of the Internship and the time spent on the work, and it will be useful in writing the final report. It may contain experimental conditions and results, ideas, mathematical expressions, rough

work and calculation, computer file names etc. All entries should be dated. The Internship supervisor should periodically examine and countersign the log book.

- 6. The log book and the typed report must be submitted at the end of the Internship.
- The institution at which the Internship will be carried out should be prior-approved by the Department Council of the college where the student has enrolled for the UG Honors programme.

2.2. EVALUATION OF INTERNSHIP

- The evaluation of Internship shall be done internally through continuous assessment mode by a committee internally constituted by the Department Council of the college where the student has enrolled for the UG Honors programme.
- The credits and marks for the Internship will be awarded only at the end of semester 6.
- The scheme of continuous evaluation and the end-semester viva-voce examination based on the submitted report shall be as given below:

Sl.	Components of Eval	uation of Internship	Marks for	Weightage
No.	-	-	Internship	0 0
			2 Credits

	end semester viva-voce			
	committee internally const			
	Council	~ 1		
		Total Marks	50	

3. PROJECT

3.1. PROJECT IN HONOURS PROGRAMME

- In Honors programme, the student has the option to do a Project of 12-credits instead of three Core Courses in Major in semester 8.
- The Project can be done in the same institution/ any other higher educational institution (HEI)/ research centre/ training centre.
- The Project in Honors programme can be a short research work or an extended internship or a skill-based training programme.
- A faculty member of the respective institution, where the student does the Project, should be the supervisor of the Project.

3.2. PROJECT IN HONORS WITH RESEARCH PROGRAMME

- Students who secure 75% marks and above (equivalently, CGPA 7.5 and above) cumulatively in the first six semesters are eligible to get selected to Honours with Research stream in the fourth year.
- A relaxation of 5% in marks (equivalently, a relaxation of 0.5 grade in CGPA) is allowed for those belonging to SC/ ST/ OBC (non-creamy layer)/ Differently-Abled/ Economically Weaker Section (EWS)/ other categories of candidates as per the decision of the UGC from time to time.
- In Honors with Research programme, the student has to do a mandatory Research Project of 12-credits instead of three Core Courses in Major in semester 8.
- The approved research centres of University of Calicut or any other university/ HEI can offer the Honours with Research programme. The departments in the affiliated colleges under University of Calicut, which are not the approved research centres of the University, should get prior approval from the University to offer the Honours with Research programme. Such departments should have minimum two faculty members with Ph.D., and they should also have the necessary infrastructure to offer Honours with Research programme.
- A faculty member of the University/ College with a Ph.D. degree can supervise the research project of the students who have enrolled for Honours with Research. One such faculty member can supervise maximum five students in Honours with Research stream.

- The maximum intake of the department for Honours with Research programme is fixed by the department based on the number of faculty members eligible for project supervision, and other academic, research, and infrastructural facilities available.
- If a greater number of eligible students are opting for the Honours with Research programme than the number of available seats, then the allotment shall be based on the existing rules of reservations and merits.

3.3. GUIDELINES FOR THE PROJECT IN HONOURS PROGRAMME AND HONOURS WITH RESEARCH PROGRAMME

- 1. Project can be in Biochemistry or allied disciplines.
- 2. Project should be done individually.
- 3. Project work can be of experimental/ theoretical/ computational in nature.
- 4. There should be minimum 360 hrs. of engagement from the student in the Project work in Honors programme as well as in Honors with Research programme.
- 5. There should be minimum 13 hrs./week of engagement (the hours corresponding to the three core courses in Major in semester 8) from the teacher in the guidance of the Project(s) in Honors programme and Honors with Research programme.
- 6. The various steps in project works are the following:
 - ➢ Wide review of a topic.
 - > Investigation on a problem in systematic way using appropriate techniques.
 - Systematic recording of the work.
 - > Reporting the results with interpretation in a standard documented form.
 - Presenting the results before the examiners.
- 7. During the Project the students should make regular and detailed entries in to a personal log book through the period of investigation. The log book will be a record of the progress of the Project and the time spent on the work, and it will be useful in writing the final report. It may contain experimental conditions and results, ideas, mathematical expressions, rough work and calculation, computer file names etc. All entries should be dated. The Project supervisor should periodically examine and countersign the log book.
- 8. The log book and the typed report must be submitted at the end of the Project. A copy of the report should be kept for reference at the department. A soft copy of the report too should be submitted, to be sent to the external examiner in advance.

26

- 9. It is desirable, but not mandatory, to publish the results of the Project in a peer reviewed journal.
- 10. The project report shall have an undertaking from the student and a certificate from the research supervisor for originality of the work, stating that there is no plagiarism, and that the work has not been submitted for the award of any other degree/ diploma in the same institution or any other institution.
- 11. The project proposal, institution at which the project is being carried out, and the project supervisor should be prior-approved by the Department Council of the college where the student has enrolled for the UG Honors programme.

3.4. EVALUATION OF PROJECT

- The evaluation of Project will be conducted at the end of the eighth semester by both internal and external modes.
- The Project in Honors programme as well as that in Honors with Research programme will be evaluated for 300 marks. Out of this, 90 marks is from internal evaluation and 210 marks, from external evaluation.
- The internal evaluation of the Project work shall be done through continuous assessment mode by a committee internally constituted by the Department Council of the college where the student has enrolled for the UG Honors programme. 30% of the weightage shall be given through this mode.
- The remaining 70% shall be awarded by the external examiner appointed by the University.
- The scheme of continuous evaluation and the end-semester viva-voce of the Project shall be as given below:

Components of Evaluation of Project	Marks for the Project (Honours/	Weightage
	Honours with Research)	
Continuous evaluation of project work through interim presentations and reports by the committee internally constituted by the Department Council	90	30%
End-semester viva-voce examination to be conducted by the external examiner appointed by the university	150	50%

Evaluation of the day-to-day records and project	60	20%
report submitted for the end-semester viva-voce		
examination conducted by the external examiner		
Total Marks	300	

INTERNAL EVALUATION OF PROJECT

Sl. No	Components of Evaluation of Project	Marks for the Project (Honours/ Honours with Research)
1	Skill in doing project work	30
2	Interim Presentation and Viva-Voce	20
3	Punctuality and Log book	20
4	Scheme/ Organization of Project Report	20
	Total Marks	90

EXTERNAL EVALUATION OF PROJECT

Sl. No	Components of Evaluation of Project	Marks for the Project (Honours/ Honours with Research) 12 credits
1	Content and relevance of the Project,	
	Methodology, Quality of analysis,	50
	and Innovations of Research	
2	Presentation of the Project	50
3	Project Report (typed copy), Log	60
	Book and References	00
4	Viva-Voce	50
	Total Marks	210

4. GENERAL FOUNDATION COURSES

• All the General Foundation Courses (3-credits) in Biochemistry are with only theory component.

4.1. INTERNAL EVALUATION

Sl. No.	Components of Internal Evaluation of a General Foundation Course in	Internal Marks of a General Foundation Course of 3-credits in Biochemistry		
	Biochemistry	4 Theory Modules	Open-ended Module	
1	Test paper/ Mid-semester Exam	10	2	

2	Seminar/ Viva/ Quiz	6	2
3	Assignment	4	1
		20	5
	Tota	1	25

4.2. EXTERNAL EVALUATION

External evaluation carries about 70% marks. Examinations will be conducted at the end of each semester. Individual questions are evaluated in marks and the total marks are converted into grades by the University based on 10-point grading system (refer section 5).

	Туре	Total No. of	No. of	Marks for	Ceiling
Duration			Questions to be	Each	of
		Questions	Answered	Question	Marks
	Short Answer	10	8-10	2	16
1.5 Hours	Paragraph/ Problem	5	4-5	6	24
	Essay	2	1	10	10
				Total Marks	50

PATTERN OF QUESTION PAPER FOR GENERAL FOUNDATION COURSES

5. LETTER GRADES AND GRADE POINTS

- Mark system is followed for evaluating each question.
- For each course in the semester letter grade and grade point are introduced in 10-point indirect grading system as per guidelines given below.
- The Semester Grade Point Average (SGPA) is computed from the grades as a measure of the student's performance in a given semester.
- The Cumulative GPA (CGPA) is based on the grades in all courses taken after joining the programme of study.
- Only the weighted grade point based on marks obtained shall be displayed on the grade card issued to the students.

S1.	Percentage of Marks	Description	Letter	Grade	Range of	Class
No.	(Internal & External		Grade	Point	Grade	
	Put Together)				Points	
1	95% and above	Outstanding	0	10	9.50 - 10	
2	Above 85% and below 95%	Excellent	A+	9	8.50 - 9.49	

LETTER GRADES AND GRADE POINTS

3	75% to below 85%	Very Good	A	8	7.50 - 8.49	First Class with Distinction
4	65% to below 75%	Good	B+	7	6.50 - 7.49	2 10 11 10 10 11
5	55% to below 65%	Above Average	В	6	5.50 - 6.49	First Class
6	45% to below 55%	Average	С	5	4.50 - 5.49	Second Class
7	35% to below 45% aggregate (internal and external put together) with a minimum of 30% in external valuation	Pass	Р	4	3.50 - 4.49	Third Class
8	Below an aggregate of 35% or below 30% in external evaluation	Fail	F	0	0-3.49	Fail
9	Not attending the examination	Absent	Ab	0	0	Fail

- When students take audit courses, they will be given Pass (P) or Fail (F) grade without any credits.
- The successful completion of all the courses and capstone components prescribed for the three-year or four-year programme with 'P' grade shall be the minimum requirement for the award of UG Degree or UG Degree Honors or UG Degree Honors with Research, as the case may be.

5.1. COMPUTATION OF SGPA AND CGPA

• The following method shall be used to compute the Semester Grade Point Average (SGPA):

The SGPA equals the product of the number of credits (Ci) with the grade points (Gi) scored by a student in each course in a semester, summed over all the courses taken by a student in the semester, and then divided by the total number of credits of all the courses taken by the student in the semester,

i.e. SGPA (Si) = Σi (Ci x Gi) / Σi (Ci)

where Ci is the number of credits of the ith course and Gi is the grade point scored by the student in the ith course in the given semester. Credit Point of a course is the value obtained by multiplying the credit (Ci) of the course by the grade point (Gi) of the course.

 $SGPA = \frac{Sum of the credit points of all the courses in a semester}{Total credits in that semester}$

Semester	Course	Credit	Letter	Grade	Credit Point
			Grade	point	(Credit x Grade)
Ι	Course 1	3	А	8	3 x 8 = 24
Ι	Course 2	4	B+	7	4 x 7 = 28
Ι	Course 3	3	В	6	3 x 6 = 18
Ι	Course 4	3	0	10	3 x 10 = 30
Ι	Course 5	3	С	5	3 x 5 = 15
Ι	Course 6	4	В	6	4 x 6 = 24
	Total	20			139
		SGF	139/20 = 6.950		

ILLUSTRATION – COMPUTATION OF SGPA

• The Cumulative Grade Point Average (CGPA) of the student shall be calculated at the end of a programme. The CGPA of a student determines the overall academic level of the student in a programme and is the criterion for ranking the students. CGPA for the three-year programme in CUFYUGP shall be calculated by the following formula.

$$CGPA = \frac{Sum of the credit points of all the courses in six semesters}{Total credits in six semesters (133)}$$

CGPA for the four-year programme in CUFYUGP shall be calculated by the following formula.

 $CGPA = \frac{Sum of the credit points of all the courses in eight semesters}{Total credits in eight semesters (177)}$

- The SGPA and CGPA shall be rounded off to three decimal points and reported in the transcripts.
- Based on the above letter grades, grade points, SGPA and CGPA, the University shall issue the transcript for each semester and a consolidated transcript indicating the performance in all semesters.

SYLLABUS

SEMESTER I

Programme	B. Sc. Biochem	nistry				
Course Code						
Course Title	INTRODUCTI	ON TO BIOC	HEMISTRY			
Type of Course	DSC /Major / N	<i>/</i> linor				
Semester	Ι					
Academic	100					
Level						
Course Details	Credit	Lecture per	Tutorial	Practical	Total Hours	
		week	per week	per week		
	4	3	-	2	75hrs	
Pre-requisites	+2 level Scienc	e with Biology	y and chemistr	y background		
Course	This course pro		-	•		
Summary	used in science			•		
	experimentation	·			1	
	significant expe		•			
	logic of life, ce			•	1 .	
	foundations, a	-		0	0	
		biomolecules, cell structure and function, molecular organization, and the				
	0,	role of energy in metabolism. Practical sessions complement theoretical				
	learning, enabl	ing hands-on	experience v	with scientific	concepts and	
	techniques.					

Course Outcomes (CO):

After the successful completion of the course, a student will be able to:

CO	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	Recognize the basic characteristics of science	U	C	Instructor- created exams / Quiz
CO2	Get familiarized with the methods and tools of science and the design of scientific experiments	U	С	Practical Assignment / Observation of Practical Skills
CO3	Recognize the molecular logic of life and identify Biochemistry as a discipline	U	С	Seminar Presentation / Group Tutorial Work

.

CO4	Highlight the cellular, chemical and physical foundations of Biochemistry.	U	С	Instructor- created exams / Home Assignments		
CO5	Identify the genetic and evolutionary foundations of Biochemistry	U	С	One Minute Reflection Writing assignments		
CO6	Explain the biochemical reactions that lead to the origin of life on earth.	U	С	Viva Voce		
 * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C) # - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M) 						

Detailed Syllabus:

Module	Unit	Content	Hrs			
Ι	Meth	ods and Tools in Science				
	1	Types of Knowledge: Practical, theoretical and scientific knowledge	1			
	2	Definition of Science and non-science, pseudo-science, laws of science, basis of scientific laws and factual truths.	2			
	3	Revolutions in science with special focus on the field of biochemistry. Hypotheses.	2			
	4	Theories and laws in science-observations, evidence and proof. Posing a question; formulation of hypothesis; hypothetico-deductive model and inductive model	1			
II	Expe	erimentation in Science				
	5	Design of an experiment; experimentation; observation, data collection; interpretation and deduction. Necessity of units and dimensions; repeatability and replication.	3			
	6	Scientific instruments: choice and selection of <i>instruments</i> , sensitivity of instruments, accuracy, precision and errors, Types of instrumentation, historical development and evolution of scientific instruments.	3			
	7	Examples of great experiments in science to illustrate how various tools were applied to answer a question [Mendel's studies of genetic traits in pea plants,	2			
	8	Thomas Hunt Morgan's work with fruit flies, Griffith's Experiment about Genetics-DNA as genetic material, Meselson-Stahl experiment etc- outline only]	2			
III	The r	The molecular logic of life and Cellular foundations of Biochemistry				
	9	Origin of biomolecules, distinguishing features of living organisms. Definition of Biochemistry and how it explores the molecular logic of life.	2			

	10	History of Biochemistry, Contribution of various scientists to the development of Biochemistry, their discoveries and classical experiments.	1
	11	Nature and scope of Biochemistry.	1
	12	Cell as the structural and functional unit of living organisms	1
	13	The universal features of living cells, prokaryotes and eukaryotes, classification of organisms according to how they obtain the energy and carbon they need for synthesizing cellular material	4
	14	The organic compounds from which most cellular materials are constructed	1
	15	Supramolecular complexes	1
	16	Bonds common in biomolecules and their strengths.	1
	17	Structural hierarchy in the molecular organization of cells.	2
IV	Chen	nical and Physical foundations of Biochemistry	
	18	Bonding versatility of carbon, formation of different functional groups.	2
	19	Role of functional groups in defining the biological and chemical personalities of biomolecules.	2
	20	Small organic molecules in cells, macromolecules as major cellular constituents.	2
	21	Concepts of molecular weight and molecular mass and their units,	2
	22	Equilibrium and steady state, living cells as open systems, energy inter conversion in living organisms, role of ATP in metabolism, regulation of metabolism to achieve cellular economy and balance.	4
V		Practicals	30 hrs
(Open module)	25	Familiarize scientific weighing using weighing bottle and electronic balance	
	26	Preparation of standard solutions	
	27	Percentage solutions W/V, V/V, W/W etc. preparation	
	28	Molar and mole fraction - solutions- preparation	
	29	Normal solutions	
	30	Quantitative transfer of materials, accuracy in transfer (to find out percentage error.)	
	31	Familiarize experimental designs- variables in experiments.	
	32	Learn the functions of light microscope.

Detailed Syllabus:

Module	Unit	Content	Hrs		
Ι	Carb	ohydrates			
	1	Classification of monosaccharides: aldoses and ketoses, trioses,	3		
		tetroses, pentoses, hexoses, and heptoses (with special emphasis to			
		important members). Linear and cyclic structure,			
	2	Rule of the ring (Structures of glucose, galactose, mannose,			
		oose, and fructose). Isomerism of carbohydrates: structural			
		merism and stereoisomerism, 'd' and 'l', 'D' and 'L' forms of			
		compounds. Glyceraldehyde as an example. R and S nomenclature			
		of enantiomers.			
	3	Examples of epimers. Mutarotation and its explanation, anomeric	3		
		forms. Basic reactions: Reactions and characteristics of aldehyde			
		and keto group: Reduction, Oxidation, Reaction with strong acids			
		(dehydration) and alkalies on sugars (tautomerization or			
		enolization), reactions of sugars due to hydroxyl group, formation			
		of esters, osazone formation.			
	4	Sugar derivatives, Sugar derivatives: sugar alcohols, sugar acids,	2		
		amino sugars, deoxysugars, sugar derivatives, glucosamine,			

		coloctocomine muranic soid N costal neurominic soid and their	
		galactosamine, muramic acid, N- acetyl neuraminic acid and their relevance.	
	5	Disaccharides Disaccharides: concept of reducing and non-	2
	-	reducing sugars, structure (Fischer and Haworth projections),	
		occurrence, chemistry, and functions of sucrose, lactose, maltose,	
		isomaltose, and cellobiose. Inversion of sucrose Polysaccharides	
	6	Polysaccharides, Classification, Homopolysaccharides:	2
	0		2
		occurrence, structure, chemistry, and functions of cellulose, starch,	
		glycogen, chitin, and inulin (with an explanation to the ends of the	
		linear polymer of sugars). Heteropolysaccharides: occurrence,	
		types, composition, and function.	
II	Amin	noacids	
	6	Definition of alpha-amino acids. Sources and structure of	2
	Ŭ	biologically relevant amino acids. Stereoisomerism:	_
	7	Structure and classification of amino acids based on polarity	2
	/	(with name, structure and additional functional groups).	2
	8		2
	0	Three letter and single letter abbreviations of amino acids. Optical	2
		properties of amino acids: L- and D-forms of amino acids	2
	9	Essential and nonessential amino acids.	2
	10	General reactions of amino acids- side chain, carboxyl, and the	2
		amino group. Zwitter ions and isoelectric pH. Ionization of amino	
		acids. Titration curve of amino acid and its significance.	
	11	Amino acids derivatives: γ-amino butyric acid (GABA),	2
		dopamine, histamine, thyroxin.	
III		F	
	Lipid	ls	
	12	Definition, sources, functions and major classes of storage and structural lipids.	1
	13		1
	15	Classification of lipids with structure and examples- simple lipids;	1
		(triacylglycerol), Compound lipids: storage and membrane lipids.	
	14	(und yrgryceror), compound npres. storage and memorane npres.	1
	14	Structure and functions of phospholipids and glycolipids, derived lipids.	1
	15	Difference between fats and oils.	1
	16	Chemical-based classification of fatty acids with examples-	1
	17	sources and structure. Physical and chemical properties of fatty acids. Saponification	1
	17	number, acid number, and iodine number and their application.	1
	18	Structure of the following fatty acids - short-chain, medium-chain	2
		and long-chain fatty acids. Sources of each fatty acid and its	
		relative size. Fatty acids present in coconut oil, groundnut oil,	
		sunflower oil, and fish oil.	
	19		2
		Essential and non-essential fatty acids with examples. Steroids:	
		Sources, Structure of steroid nucleus, cholesterol, ergosterol,	
		stigmasterol, calciferol. Eicosanoids-definition & classes only	
		sugmasterol, calcherol. Elcosanolds-definition & classes only	

IV					
	Vitar	nins & Minerals			
	20	Definition, classification- fat-soluble and water-soluble, sources,	2		
	21	Chemical nature (without structure), Functions, deficiency	3		
		disorders			
	22 Macro minerals (Ca, P, Mg, Na, K, Cl) sources, daily				
		requirements, functions, deficiency diseases, Trace elements, -			
		their sources, daily requirements, functions, and deficiency			
		diseases			
V	Pract	ticals	30		
(open	1	General reactions of Carbohydrates, Aminoacids, Proteins, and			
module)		lipids			
	2	Specific reactions of sugars, amino acids,			
	3	Systematic analysis of biomolecules			
	4	Saponification number, Iodine number			
	5	5 Estimation of carbohydrates by colorimetric methods			
	6	Separation of amino acids by paper chromatography, TLC

Detailed Syllabus:

Module	Unit	Content	Hrs
Ι	Pepti	des	
	1	Peptides Formation of the Peptide, peptide bond, features of	2
		peptides- peptide plane, dihedral (torsion) angles- Phi And Psi.	
	2	Oligopeptides: Structure and functions of naturally occurring	2
		Oligopeptides-glutathione, Oxytocin, vasopressin, and insulin.	
	3	Polypeptide, N and C terminals, cyclic peptides	2
	4	Make polypeptides with 5 amino acids (Compulsory exercise)	2
II	Prote	ins Classification	
	7	Classification based on solubility (simple proteins, albumins, globulins, prolamins, glutelins, protamines, albuminoids), classification based on composition (simple and conjugated proteins).	3
	8	Classification based on function (catalytic proteins - enzymes, regulatory proteins - hormones, protective proteins – antibodies, storage proteins, transport proteins, structural proteins, secretory proteins, exotic proteins, toxic proteins).	3
	9	Classification based on size and shape (globular proteins, fibrous proteins, and intermediate proteins)	2
	10	Classification based on the location of the protein in the cell (membrane-bound proteins- translocase, soluble cytosol proteins, matrix proteins, lysosomal proteins).	2
III	Prote	in structure	
	11	Primary structure of protein: definition, elucidation of primary structure- N-terminus identification- Sanger's method, using Dansyl chloride, Edman degradation (explain with different steps). C-terminal identification- enzymatic digestion, using Cyanogen bromide (CNBr).	3
	12	Secondary structure: Definition, the structure of C terminal and N terminals of protein. Modern methods of protein sequencing, Confirmation, types of secondary structures- alpha, beta, turn or bends, loops, helixes, parallel and antiparallel beta-pleated sheet. Alpha helix, Ramachandran's plot, Ramachandran number, Sources and examples related to secondary structures-keratin, collagen. Outline the structure of collagen.	3

module)	2	Precipitation of proteins	-
(open	1	Color reactions of proteins	
V	Pract	(chain-termination method icals	30Hr
	22	Sequencing of DNA: basic principles of the methods: Maxim– Gilbert (chemical sequencing) and Sanger dideoxy sequencing	2
		structures of these RNAs. Sequencing of DNA: basic principles of the methods: Maxam–Gilbert (chemical sequencing) and Sanger dideoxy sequencing (chain-termination method)	
	21	significance Types of RNA (tRNA, rRNA, mRNA). Elementary study of the structures of these RNAs. Segmenting of DNA: hosis minimized	2
	20	Watson and Crick base pair and Hoogsteen base pair. A, B, and Z forms of DNA, physical properties of DNA (glycosidic bond- anti and syn conformation and endo-exo confirmation of sugars and confirmation of heterocyclic base). Nucleic acids: DNA and RNA: hyperchromic effect, Tm-values, cot curves, and their significance	2
	20	chemical properties of DNA, Chargaff's base pair rule, X-ray Diffraction studies, Double helical structure of DNA: basic ideas of Watson and Crick model. Hydrogen bonding.	2
	19	Secondary structure of nucleotides Three-dimensional structure of nucleic acids- Physical and	2
		structure of DNA and RNA. Polynucleotide: Structure, a diagrammatic representation of DNA polynucleotide and RNA polynucleotide. Linkages in nucleoside and nucleotide: Phosphodiester bond (structure) and 5' and 3' ends of the polynucleotide (structure).	
	18	nucleosides and nucleotides (Ribonucleotides and Deoxynucleotides) Unusual bases in nucleic acids. cAMP structure. Primary	2
	17	Primary structure (Bases, sugars and phosphoric acid): Structure of common purine and pyrimidine bases, tautomeric forms of bases, Structure of sugar, and phosphoric acid, the structure of	1
	Nucle 16	eic acids Nucleic acids -types. Structural organization of nucleic acids:	1
IV	15	Protein folding, Reactions of proteins: Chemical reactions, precipitation reactions - salt and heavy metal precipitation of proteins. Colour reactions for proteins	3
	14	Quaternary structures of proteins. Definition, Protein with quaternary structure- example- human hemoglobin, DNA polymerase.	3
	13	Tertiary structure: Definition, tertiary forces (ionic, hydrophobic interaction, van der Waals forces, and electrostatic bonds). Protein denaturation and renaturation (explain with Ribonuclease enzyme). Examples - structures of myoglobin and hemoglobin.	3

5	Extraction of total proteins from natural sources.

Course	This course c	This course covers a range of laboratory techniques essential for			
Summary	biological and	biochemical	research. It	starts with o	cell disruption

methods, including tissue homogenization and extraction techniques. The
focus then shifts to chromatography techniques like partition, adsorption,
ion-exchange, and gel filtration chromatography. Electrophoresis
methods, including gel electrophoresis and isoelectric focusing, are
explored in detail. Additionally, centrifugation, colorimetry,
spectrophotometry, and radioisotopic methods are discussed, providing
students with a comprehensive understanding of analytical techniques
commonly used in biological research. Practical sessions complement
theoretical knowledge, offering hands-on experience in applying these
techniques.

Course Outcomes (CO):

CO	CO Statement	Cognitive	Knowledge	Evaluation Tools
		Level*	Category#	used
CO1	Understand various techniques used in biochemical separation and analysis.	А	С	Instructor-created exams / Quiz
CO2	Outline the principles and applications of chromatography techniques.	А	С	Practical Assignment / Observation of Practical Skills
CO3	Comprehend the principles and applications of different electrophoresis techniques.	А	Р	Seminar Presentation / Group Tutorial Work
CO4	Comprehend the principles and applications of different centrifugation, Colorimetric and spectrophotometric techniques.	А	Р	Instructor-created exams / Home Assignments
CO5	Identify importance and applications of the techniques in Biochemistry	А	Р	One Minute Reflection Writing assignments
CO6	Understand the basics of Radio isotopic techniques used in Biochemistry	А	Р	Viva Voce
	emember (R), Understand (U), Ap			
	ctual Knowledge(F) Conceptual Cognitive Knowledge (M)	Knowledge (C) P	rocedural Knowle	uge (P)
wieta				

After the successful completion of the course, a student will be able to:

Detailed Syllabus:

Module	Unit	Content	Hrs
Ι	Cell disruption techniques		

•

	1	Methods of tissue homogenization-Mortar and pestle,	2
	1	mechanical, ultra sonication, freeze-thaw homogenization	2
	2	Salt and organic solvent extraction and fractionation	1
	3	Dialysis, Reverse dialysis, ultrafiltration.	2
	4		1
	4	Lyophilisation	1
II		tography(The principle, procedure, and application of the g chromatographic techniques)	
	5	Partition chromatography (Paper, TLC, HPLC, HPTLC)	2
	6	Adsorption chromatography, (Column, Gas)	2
	7	Ion-exchange chromatography	2
	8	Gel filtration chromatography	2
	9	Dye –Ligand chromatography	1
	10	Flash chromatography	1
III	Electrop		
	11	The principle, procedure, and application of zone electrophoresis - Paper electrophoresis, membrane electrophoresis	3
	12	Gel electrophoresis, PAGE and SDS-PAGE	2
	13	Isoelectric focusing, high voltage electrophoresis, pulse-field	3
	15	electrophoresis, immune electrophoresis	5
	14	2D gel electrophoresis	2
	15	Zymography	2
IV	Centrifu	igation, Colorimetry and spectrophotometry	
	16	Principle of sedimentation technique. Relationship with rpm and radius of rotation. RCF centrifugal force (\times g). Different types of centrifuge and rotors.	2
	17	The principle, procedure, and application of differential	3
		centrifugation, density gradient centrifugation Ultracentrifugation, rate zonal centrifugation, isopycnic centrifugation	
	18	Laws of light absorption -Beer-Lamberts law. UV and visible absorption spectra, molar extinction coefficient and quantitation. Principle and instrumentation of colorimetry	3
	19	Spectrophotometry. AAS and emission spectrometry	2
	20	Nephelometry, Fluorimetry	2
			3
	21	Radio isotopic methods Isotopes, isobars, ionizing and nonionizing radiations. Principle and application of RIA.	
	21	Isotopes, isobars, ionizing and nonionizing radiations.	2
V		Isotopes, isobars, ionizing and nonionizing radiations. Principle and application of RIA. Measurement of radioactivity by GM counter and Scintillation counter. Autoradiography	

(open	2	Separation of amino acids by paper and TLC	
module)	3	Separation of serum protein by agarose gel electrophoresis	
		(Demonstration)	
	4 Proof of Beers lamberts law using colorimeter		
	5	Training to use spectrophotometer.

Course	The course prov	vides an overv	iew of enzyme	ology, covering	g the history of				
Summary	enzymes, their	classification,	, and activity.	It explores va	arious types of				
	enzymes, including isoenzymes, and delves into the role of coenzymes,								
	cofactors, and p	prosthetic grou	ps in enzyme	function.					

Course Outcomes (CO):

After the successful completion of the course, a student will be able to:

CO	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used				
CO1	Understand the basics of enzymology, including history and classification	А	С	Instructor-created exams / Quiz				
CO2	Differentiate the terms coenzyme, prosthetic group.	А	С	Practical Assignment / Observation of Practical Skills				
CO3	Understand the fundamentals of enzyme kinetics	A	Р	Seminar Presentation / Group Tutorial Work				
CO4	Describe enzyme inhibition and regulation	А	Р	Instructor-created exams / Home Assignments				
CO5	Demonstrate the basics of enzyme reaction mechanism.	A	Р	One Minute Reflection Writing assignments				
CO6	Perform enzyme assay in laboratory.	А	Р	Viva Voce				
# - Fa	 * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C) # - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M) 							

Detailed Syllabus:

Module	Unit	Content	Hrs					
Ι	Intro	Introduction to Enzymes						
	1	History of enzymology, Proteins as enzymes.	2					
	2	Briefly mention about ribozymes and abzymes, examples	2					
	3	Isoenzymes, examples, applications	2					
	4	Definition and examples of holoenzyme, apoenzyme and prosthetic	2					
		group						

.

II	Class	ification of enzymes and Enzyme activity			
	7	Classical nomenclature of enzymes, examples, demerits. IUBMB system of classification and nomenclature of enzymes (seven classes), Class and subclass with one example	3		
	8 Enzyme activity and Specific activity- definition and significance. Units of activity: International unit (IU) and Ketal units				
	9	Enzyme specificity, substrate, geometrical, optical, coenzyme, co factor specificities with examples	3		
III	Coen	zymes and cofactors			
	10	Definition and examples of metalloenzymes, coenzymes, prosthetic groups.	3		
	11	Coenzyme functions- NAD, NADP+, FAD, FMN, lipoic acid, TPP, pyridoxal phosphate and biotin(structure and one reaction each).	3		
	12	Co factors, metal cofactors, examples and associated enzymes.	3		
IV	Basic	s of Enzyme kinetics &mechanism			
	13	Rate of reactions, Order of enzyme catalysed reactions	1		
	14	Progressive curve, its features	1		
	15	M M equation, its importance, Km value, its units and relevance,	2		
	16	Double reciprocal plot, importance & advantage	2		
	17	Factors affecting the velocity of enzyme catalysed reactions Enzyme inhibition, types, with examples, kinetics	2		
	18	Enzyme inhibition, types, with examples, kinetics	2		
	19	Regulation of enzyme, Allosteric & Covalent regulation with example	2		
	20	Basic concepts of mechanism- acid base catalysis, covalent catalysis, stress and strain, induced fit models, Concept of active site, 'Lock and key' model of Emil Fischer.	2		
	21	Enzyme purification	2		
	22	Immobilized enzymes	1		
V	Pract		30		
(open	1	Identification of different enzymes and their functions			
module)	2	Familiarize yourself with the enzymology lab - equipment, basic			
		practices etc.			
	3	Assay of enzymes- Amylase, trypsin to express activity, specific			
	Λ	activity, IU & Katal etc.	-		
	4	Assay of clinical enzymes using kits.

Detailed Syllabus:

Module	Unit	Content	Hrs	
Ι	Intro	Introduction to metabolism		
	1	Definition of metabolism. Catabolism and anabolism	2	
	2 Three stages of metabolism. Introduction to metabolic pathways,		2	
	3	Compartmentalization of metabolic pathways in cells	2	
	4	Techniques to study metabolism	2	
II Anaerobic metabolism of Carbohydrat		robic metabolism of Carbohydrates		
	5	Anaerobic phase: Glycolytic pathway with structures, energetics, and regulation of Glycolysis Reciprocal regulation of glycolysis and gluconeogenesis.	2	
	6	HMP shunt and its significance. Cori cycle.	1	
7		The fate of pyruvate under anaerobic condition. Alcoholic Fermentation,	1	
	8	Starch degradation, Glycogen breakdown	1	
	9	Hydrolysis of dietary disaccharides and polysaccharides,	1	
	10	Entry of other monosaccharides to the glycolytic pathway: galactose/ fructose metabolism	1	

	1		1
	11	Gluconeogenesis: from pyruvate, from amino acids (without	2
	- 10	structure) and from propionyl CoA and its regulation	
	12	Glycogen synthesis and regulation.	2
	13	Glyoxylate pathway, Importance.	1
III	Catal	polism of lipids	
	14	Transport of fatty acids into mitochondria	1
	15	β oxidation of fatty acids. β -oxidation of palmitic acid and its energy balance sheet.	2
	13	Regulation of fatty acid oxidation, ketone body metabolism, ketoacidosis	3
	14	Degradation of unsaturated fatty acids	1
	15	Degradation of branched chain aminoacids	1
	16	Disorders of fatty acids catabolism	2
IV	Catal	oolism of amino acids	
	17	Transamination, oxidative deamination, reductive amination, non-oxidative deamination and decarboxylation of amino acids. Role of pyridoxal phosphate.	3
	18	Metabolic fates of amino acids- glucogenic, ketogenic and gluco-ketogenic amino acids (structures not needed.)	2
	18	Branched chain amino acids degradation (outlines)	2

Detailed Syllabus:

Module	Unit	Content	Hrs
Ι	Genom	e Organization and Transposons	
	1	Introduction to genome organization	1
	2	Chromatin structure and organization	1
	3	Centromere, telomere, exons, and introns	2
	4	Identification of DNA as genetic material. Griffith, Avery, McLeod, and McCarty's experiments, Hershey and Chase experiment.	2
	5	The chemical nature of the gene, Definition of a gene, C-value paradox.	2

	6	Prokaryotic transposable elements, IS elements, Composite transposons, Tn-3 elements, Modes of transposition (brief study).	2
II	Replicat	ion of DNA	
	5	Central dogma, Replication, types, importance.	2
	6	Semiconservative mode of DNA replication- proof	2
	7	Replication fork, Enzymology, chemistry, and events of DNA replication, Fidelity of DNA replication	2
	8	Inhibitors	2
	9	Differences between Prokaryotic and Eukaryotic Replication - Comparative study	2
III	Transcri	iption	
	10	Transcription in Prokaryotes, Detailed theory, enzymology, chemistry, and events of transcription.	2
	11	Inhibitors of transcription	1
	12	Differences between Prokaryotic and Eukaryotic Transcription, Comparative analysis.	2
	13	Brief mention of post-transcriptional processing.	2
	14	Specifications of m-RNA, tRNA, rRNA	1
IV	Translat	ion and Regulation of Gene Expression	17
	15	Genetic Code and Translation, Definition and features of genetic code, Triplet code, codon, genetic code word chart, and wobble hypothesis.	2
	16	Translation in Prokaryotes- Enzymology, chemistry, and events of protein synthesis, Inhibitors of protein synthesis	2
	17	Differences between Prokaryotic and Eukaryotic Translation-comparative study, Brief mention of post- translational modifications Regulation of Gene Expression in Prokaryotes, Operon concept, Lac operon, Tryptophan operon	3
	18	. Types of Mutations- Induced versus spontaneous mutations, Back versus suppressor mutations	2

	19	Mutagens and Molecular Basis of Mutations- Physical, chemical and biological mutagens, Detection of mutations: Ames test	2
	20	DNA Repair Mechanisms-Direct repair: DNA photolyases Mismatch repair, Base excision repair, Nucleotide excision repair, SOS repair	2
	21	DNA Mutation, Repair and Cytogenetics of Cancer Cytogenetics of Cancer (Brief Account). Overview of Cytogenetics.	2
	22	Basics of Cancer Genetics- A brief introduction to oncogenes and tumor suppressor genes. A brief study on the role of genetic mutations in cancer development with a few specific examples of genetic mutations in well-known cancer types.	2
V (open module)		Practicals	30
	1	Isolation of DNA (onion/other sources)	
	2	Estimation of DNA	1
	3	Separation of DNA by Agarose gel electrophoresis	
	4	SDS PAGE-Protein separation	-
	5	Polymerase Chain Reaction (Demonstration)

Metao	cognitive Knowledge (M)							

Detailed Syllabus:

Module	Unit	Content	Hrs
Ι			
	Overview	of the immune system	
	1	Immunity, types of immunity: innate, acquired, passive &	3
		active. Barriers of innate immunity.	
	2	Collaboration of Innate and adaptive mechanisms for an	3
		effective immune response	
	3	Hematopoiesis. Structure, functions and properties of	3
		Immune cells: Stem cell, T cell, B cell, NK cell,	
		macrophage, neutrophil, eosinophil, basophil, mast cell,	
		dendritic cell.	
	4	Organs of the Immune system: Primary and secondary	3
		lymphoid organs – Bone Marrow, Thymus, Lymph Node,	
		Spleen, GALT, MALT, CALT Cells	
II	Antigons	antibodies & MHCs	
	Anugens, a	antiboules & MIICS	
	5	Antigens: Factors that influence immunogenicity, epitopes,	2
	5	haptens.	-
		Practical : Haemagglutination reaction	
	6	Immunoglobulins: Structure of immunoglobulins, Classes	2
		of immunoglobulins and their functions	
	7	Production of Monoclonal antibodies and application	2
	8	Major histocompatibility complex (elementary study):	2
		Structure, Peptide interaction with	
		MHC, MHC restriction	
	9	Processing and presentation of antigens.	2
	10	Antigen-antibody interactions: Precipitation reaction,	2
		Immunodiffusion, agglutination	
	11	ELISA, RIA, Immunoprecipitation, Immunofluorescence.	2
		Western blotting	
III	Humoral &	& cell-mediated immune responses	
	12	T-Cell & B-cell receptors. Humoral & cell-mediated	2
	12	immune responses. Cytokines	-
		1 2	
	13	Structure and function, classification, and types of	2
		cytokines according to the function	
	14	Cytokine related diseases.	2

	15	Complement system: The function of complement, the	2
		complement components, Complement activation	
		pathways. Complement deficiencies.	
	16	Immunodeficiency diseases, Phagocytic, humoral and cell- mediated deficiencies.	2
IV	Hypersensit	ivity and autoimmunity	
	17	Hypersensitivity- Gell and Coombs classification- IgE mediated Type I hypersensitivity, Antibody-mediated cytotoxic (Type II) hypersensitivity, Immune complex- mediated (Type III) Hypersensitivity,.	2
	18	DTH (delayed-type hypersensitivity T cells) (Type IV) hypersensitivity	2
	19	Autoimmunity: autoantibodies and their devastative role. Autoimmune diseases- Definition	2
	20	Classification -organ-specific and systemic autoimmune diseases - systemic lupus erythematous, Multiple sclerosis, Rheumatoid arthritis, scleroderma, Myasthenia Gravies	2
	21	Insulin dependent diabetic mellitus. Tumor & transplantation immunology – brief outline study	1
	22	Emerging autoimmune disorders	1
V (Open module)	Vaccines		
	23	Types of vaccines.	2
	24	Vaccines from whole organisms, Polysaccharide vaccines	2
	25	Toxoids as vaccines	2
	26	Vaccines from recombination vectors	2
	27	DNA as vaccines	2
	28	Vaccines from synthetic peptides.	2

Pre-requisites	Basics of metab	oolism					
Course	This course off	fers a detailed	exploration of	of bioenergetic	s of metabolic		
Summary	reactions, begin	ning with the	rmodynamics	and the role of	free energy in		
	biological syste	ems, leading to	o an understan	ding of ATP a	s the universal		
	energy currency	y. It then delve	es into mitocho	ondrial oxidation	on, the electron		
	transport chair	transport chain, oxidative phosphorylation, lipid synthesis, protein					
	degradation, an	d the metabol	ism of biogen	ic amines, pro	viding insights		
	into cellular ene	ergy productio	on and metabol	ism.			

Course Outcomes (CO):

After the successful completion of the course, a student will be able to:

CO	CO Statement	Cognitive	Knowledge	Evaluation Tools
		Level*	Category#	used
CO1	Fundamental energetics of biochemical processes and chemical logic of metabolic pathways.	U	С	Instructor-created exams / Quiz
CO2	Knowledge on the concepts to illustrate how enzymes and redox carriers and the oxidative phosphorylation machinery occur.	A	С	Practical Assignment / Observation of Practical Skills
CO3	To evaluate coupled reactions and their role in metabolism and Chemiosmotic hypothesis of ATP synthesis.	E	Р	Seminar Presentation / Group Tutorial Work
CO4	To describe the transportation of reducing potentials into mitochondria.	А	Р	Instructor-created exams / Home Assignments
CO5	To describe Inhibitors of ETC and inhibitors and uncouplers of oxidative phosphorylation.	А	Р	One Minute Reflection Writing assignments
CO6	To Illustrate the catabolism of lipids, Metabolism of ketone bodies and amino acids	A	Р	Viva Voce
* - Re	emember (R), Understand (U)	, Apply (Ap), Ana	lyse (An), Evaluate	e (E), Create (C)
# - Fa	ctual Knowledge(F) Concept	ual Knowledge (C) Procedural Know	ledge (P)
Metao	cognitive Knowledge (M)			

Module	Unit	Content	Hrs		
I Bio		energetics			
	1	Introduction, Thermodynamics (Brief study) and relevance in the biological system (Brief study). Free energy change.	2		
		Difference between ΔG and ΔG° .			
	2	The requirement of free energy for cells, coupling	1		
		reactions, ATP cycle			
	3	Phosphorylation potential, phosphoryl group transfers.	2		
		Chemical basis of high standard free energy of ATP			
		hydrolysis, other phosphorylated compounds and thioesters			
	4	ATP as universal energy currency in the biological system,	1		
	5	Role of high energy phosphates in energy transfer-redox	2		
		potential, biological oxidation			

II	Mitoch	ondrial Oxidation and Electron Transport Chain					
	5	Ultra Structure of mitochondria	2				
	6	Pyruvate oxidation and formation of reducing equivalents in TCA cycle, inhibitors	3				
	7	Electron transport chain - its organization (sequence of electron carriers: NADH ubiquinone dehydrogenase, Succinate dehydrogenase, cytochrome reductase, and cytochrome oxidase)	3				
	8	Events of electron transport chain	2				
	9	Inhibitors of ETC	2				
	10	The amphibole nature of TCA cycle	3				
III	Oxidat	ive Phosphorylation					
	11	Oxidative phosphorylation and mechanism of ATP synthesis.	2				
	12	Peter Mitchell's chemiosmotic hypothesis (an outline) P/O ratio, Proton motive force. FoF1 ATP synthase - structure	2				
	13	Regulation of oxidative phosphorylation. Inhibitors and uncouplers.	1				
	14	Transport of reducing potentials into mitochondria and metabolite transporters in mitochondria.	2				
	15	Control of ATP production	2				
	16	Thermogenesis.	1				
IV		Lipid synthesis, Protein degradation & Metabolism of Biogenic amines					
	17	Fatty acid synthesis overview, Fatty acid synthase complex	2				
	18	The events of fatty acid synthesis, Elongases and desaturases, Inhibitors	2				
	19	The transport of mitochondrial acetyl co A to cytosol, Disorders of fatty acids synthesis	2				
	20	Catabolism of amino acids Protein Degradation Protein degradation, Proteasome mediated cellular protein degradation, ubiquitin and proteases	2				
	21	Metabolism of biogenic amines Fate of carbon skeleton of amino acids	2				
	22	22One carbon metabolism, functions & biosynthesis of polyamines. Functions of biogenic amines(brief study)					
V (open	Practic	als	30				
module)	1	Assay of Transaminases					
	2	Estimation of inorganic phosphate	1				
	3	Estimation of serum urea	1

Module	Unit	Content	Hrs	
Ι	Introduction to physiology & Digestion and absorption			
	1	Functional organization of the human body: extracellular and intracellular fluids, constituents and characteristics of extracellular fluid, homeostasis.	2	

	2	An overview of coordination between major functional systems of the human body	2						
	3	Functions of different gastrointestinal organs in	2						
		digestion and absorption, secretion of digestive fluids							
		and enzymes, activation of digestive enzymes,							
		gastrointestinal hormones, epithelial transport of							
	4	solutes.	2						
	4	Digestion and absorption of carbohydrates, proteins, lipids, vitamins and minerals, composition, types, and	2						
		function of bile, enterohepatic circulation							
II	Biochemis	try of Blood & cardiac function							
	5	Constituents of blood, types of blood cells, components of plasma, plasma proteins-types, and functions. Serum, composition.	2						
	6	Formation of blood cells, blood groups, bleeding time							
	7	7 Mechanism of blood clotting (intrinsic and extrinsic pathway).							
	8	Clotting time, Clotting factors and anticoagulants	1						
	9	Structure and function of hemoglobin, types of hemoglobin, formation and destruction of hemoglobin	2						
	10	Functions of CVS, circulation of blood.	2						
	11	Blood pressure, clinical methods of measuring Blood pressure.	1						
	12	Vasoconstrictors and vasodilators	1						
III	Biochemistry of respiration and renal function								
	13	Pulmonary volumes, pulmonary capacity, Blood flow through lungs and its distribution.	3						
	14	Transport of oxygen and carbon dioxide in the blood, The role of haemoglobin and Carbonic anhydrase.	3						
	15	Chloride shift, Oxygen dissociation curve and Bohr effect, The role of 2,3-bisphosphoglycerate, Respiratory exchange ratio.	3						
	16Renal excretory mechanism, Glomerular filtration, Tubular reabsorption of glucose, water and electrolytes Tubular secretion. Regulation of water and electrolyte balance. Respiratory and renal regulation of pH.								
IV	Biochemis	try of Specialized tissues & endocrinology							
	17	Muscle: Muscle proteins, Organization of contractile unit and mechanism of muscle contraction (Sliding filament theory).	2						

	10					
	18	Maintenance of ATP availability in active muscle, the	2			
		role of creatine and creatine kinase, , fuel metabolism in				
		muscle				
	19	Neurons- ultra structure, Mechanism of nerve impulse	2			
		transmission, neurotransmitters, acetylcholine, GABA,				
		serotonin, dopamine				
	20	Bone-Role of calcium, phosphorus, vitamin D in bone	2			
		metabolism. Collagen in bone formation, Bone				
		disorders				
	21	Organization of the endocrine system. Hormone				
		secretion, transport, and clearance from blood, General				
		mechanism of hormone action-				
	22	Classification of hormones and hormone action- type I	3			
		and type II hormones. Concept of second messengers-				
		cAMP, DAG, IP3, G protein. A brief study of chemistry				
		and major physiological functions of hormones of				
		Hypothalamus (vasopressin, oxytocin), Pituitary				
		(growth hormone, corticotropic hormone, thyroid-				
		stimulating hormone, gonadotropic hormone), Adrenal				
		(epinephrine, glucocorticoids, mineralocorticoids),				
		Thyroid (thyroxine, calcitonin), Parathyroid, Pancreas				
		(insulin, glucagon) and Gonads (androgen, estrogen				
V(open			30Hrs			
module)	Practicals					
	1	Basics of Hemocytometer				
	2	Blood count, TC & DC				
	3	Blood grouping				
	4	Clotting and bleeding time.				
	5	Determination of hemoglobin levels				
	6	Packed cell volume	1			
	7	Erythrocyte sedimentation rate	1			
	8	Total urine volume -Collection of urine 24 hrs basis

Module	Unit	Content	Hrs
Ι	Unit	[
	1	Recombinant DNA Technology: basic principles	3
	2	Restriction endonucleases	1
	3	Cloning vectors: plasmid vectors, phage vectors, cosmid vectors	2
	4	High capacity cloning vectors- BACs, PACs, YACs and human artificial chromosomes	3
II	Unit	П	
	5	Cloning strategies: Directional Cloning, Blunt ended cloning; Cloning of fusion proteins; Introducing of tags to cloned proteins.	3
	6	Library Construction: cDNA and genomic DNA libraries	2
	7	cDNA cloning and cloning from genomic DNA.	2
	 8 Expression systems: Expression vectors for optimum protein synthesis, solubilization of expressed proteins. 		2
	9	Prokaryotic expression systems; Eukaryotic expression systems; Insect cell expression systems- baculovirus transfer vector.	2
	10	Gene transfer methods: Physical, Chemical and Biological.	1
	11	Screening of recombinants: Marker inactivation, nucleic acid hybridization and immunological screening for expressed genes.	1
III	Unit	Ш	
	12	Techniques in gene manipulation: Site directed mutagenesis; Random mutagenesis using PCR;	2
	13	Protein engineering to improve enzymes	3
	14	DNA shuffling.	3
	15	Transgenic Animals/ Cells: Transgenic animal, Retroviral DNA microinjection and engineered stem cells methods for producing transgenic mice.	3
	16	Whole body Knock outs and conditional knock outs.	2
	17	Use of CRISPR-CAS in generation of gene knock outs.	2
	18	Genome editing: Genome editing strategies based on Homologous recombination, ZFN, TALENS, CRISPR/Cas9	3

IV	Unit	IV		
	19	Gene silencing: Transcriptional gene silencing –Genomic imprinting, effect of paramutation, position effect,	2	
	20	RNA directed DNA methylation, role of transposon silencing in gene expression.	2	
	21	Post-translational gene silencing – RNA interference, siRNA and miRNA mediated gene silencing,	2	
	22	Anti-sense RNA technology.	2

Module	Unit	Content	Hrs
I	Enzyı	me kinetics	
	1	Importance of enzymes in biological systems, active site, substrate specificity, mechanism of action of different coenzymes in specific reaction types,	1
	2	Derivation of Michaelis-Menten equation for uni- substrate reactions.	1
	3	Different plots for the determination of Km & Vmax and their physiological significance	2
4		Importance of Kcat/Km. Kinetics of zero & first order reactions.	1
	5	Significance and evaluation of energy of activation. Collision & transition state theories.	1
	6	Michaels – pH functions & their significance	2
	7	Classification of multi substrate reactions with examples of each class. Derivation of the rate of expression for Ping Pong, random & ordered Bi-Bi mechanisms.	1
	8	Use of initial velocity, inhibition and exchange studies to differentiate between multi substrate reaction mechanisms	1
	9	Reversible and irreversible inhibition. Competitive, non- competitive, uncompetitive, Suicide inhibition, linear-mixed type inhibitions and their kinetics, determination of KI	2

II			
	Mech	anism of Enzyme Action	
	10	Acid-base catalysis, covalent catalysis, proximity, orientation effect. Strain & distortion theory.	3
	11	Chemical modification of active site groups	2
	12	Mechanism of action of chymotrypsin, carbonic anhydrases, lysozyme, glyceraldehyde 3-phosphate dehydrogenase, aldolase, carboxypeptidase, triose phosphate isomerase and alcohol dehydrogenase.	2
	13	Experimental approaches to the determination of enzyme mechanisms	2
III	Enzy	me Regulation	
	14	General mechanisms of enzyme regulation, product inhibition. Reversible (glutamine synthase & phosphorylase) and irreversible (proteases) covalent modifications of enzymes, Mono cyclic and multicyclic cascade systems with specific examples	3
	15	Feedback inhibition and feed forward stimulation. Allosteric enzymes, qualitative description of "concerted" & "sequential" models for allosteric enzymes.	2
	16	Half site reactivity, Flip-flop mechanism, positive and negative co-operativity with special reference to aspartate transcarbamoylase & phosphofructokinase.	3
	17	Protein-ligand binding measurement, analysis of binding isotherms, Hill and Scatchard plots	2
IV	Multi	enzyme systems and application of enzymes	
	18	Multienzyme system – Occurrence, isolation & their properties. Mechanism of action and regulation of pyruvate dehydrogenase & fatty acid synthase complexes, Enzyme- enzyme interaction	3
	19	Multiple forms of enzymes with special reference to lactate dehydrogenase	3
	20	Applications of enzymes in Industry	3
	21	Applications in Pharmaceuticals, diagnostics & Applications in molecular biology research	2
	22	Enzyme purification Extraction and purification of enzymes from different sources. Criteria of purity	3
V	Pract		30
(open module)	1	The theoretical aspects of an assay, activity, specific activity, Units of enzyme	
	2	Assay of Alpha amylase from saliva	
	3	Assay of Beta amylase from plants	1
	4	Assay of Trypsin	-
	5	Effect of Temperature, Ph, and Substrate concentration on velocity	1
		,	1

6	Construction of progressive curve, double reciprocal plot	
	using assay data.	
7	Inhibition studies using trypsin inhibitors	
8	Construction of kinetic curves using inhibition data. (Dixon	
	curve)	
9	Enzyme purification from animal & plant and microbial	
	sources.

Course Details	Credit	Lecture per	Tutorial	Practical	Total Hours				
		week	per week	per week					
	4	4	-	-	60				
Pre-requisites									

Course	This course equips students with essential research skills and								
Summary	methodologies necessary for conducting scientific investigations. They								
	learn how to select topics, plan research projects, and prepare proposals								
	effectively. Through hands-on training in literature collection, digital								
	library search techniques, and data analysis using statistical software,								
	students develop proficiency in gathering and analyzing research data.								
	Practical sessions focus on thesis writing, including structuring, citing								
	references, and manuscript preparation for publication in peer-reviewed								
	journals, while also addressing ethical considerations like plagiarism and								
	understanding the publication process. Finally, an open module explores								
	avenues for publishing research findings in newspapers, newsletters, and								
	peer-reviewed journals.								

Course Outcomes (CO):

СО	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	Analyze the basics in research methodology and applying them in research/project work	An	C	Instructor-created exams / Quiz
CO2	Apply an appropriate research design.	А	С	Practical Assignment / Observation of Practical Skills
CO3	Take up and implement research project.	С	Р	Seminar Presentation / Group Tutorial Work
CO4	Acquire skills to perform literature review, using internet	А	Р	Instructor-created exams / Home Assignments
CO5	Analyze the data, know the different types of data and know the different way to present the data scientifically and systematically.	An	Р	One Minute Reflection Writing assignments
CO6	Identify the components of a thesis, understand the purpose of thesis and practice writing and improving thesis statements.	A	Р	Viva Voce
# - Fa	emember (R), Understand (U) actual Knowledge(F) Concept cognitive Knowledge (M)

	1	Biology and Genetics of Cells and Organisms	2			
	2	The Nature of Cancer	2			
	3	Origin and Terminology. apoptosis -Historical perspectives				
	4	Biochemical mechanisms of apoptosis, caspases, bcl-2 family				
		Role of mitochondria in apoptosis, Resistance to apoptosis in				
		cancer				
II	Oncog	enes and cancer induction				
	5	Tumor suppressor genes, retroviral oncogenes, proto oncogenes.	2			
	6	Tumorigenesis. Chemical and physical carcinogenesis. Theories of carcinogenesis	2			
	7	Malignant Transformation of Cells, characteristics of transformed cells, Transformation of animal cells by tumor viruses	2			
	8	Virus host interactions – morphological and biochemical studies.	2			
	9	DNA Tumor Viruses, SV40 and Polyoma, Papilloma Viruses E6 and E7, Adenoviruses E1A and E1B, Hepatitis B Virus, Herpes Viruses	2			
III	Mecha	nisms of tumor metastatses				
	10	Metastatic cascade – Angiogenesis, cell Attachment (Selectins & Integrins)	3			

	11	Invasion and Cell Proliferation. Receptors, and Cancer.	3					
	12	Role of growth factors in Carcinogenesis. Growth Factors	3					
	13	Tumor Antigens - tumor-specific transplantation antigens (TSTAs) and tumor-associated transplantation antigens (TATAs)	2					
	14	Chemically or physically induced Tumor antigens. Oncofetal tumor antigens, oncogene proteins as tumor antigens						
	15	Diversity Of The T Cell Repertoire Against Tumor Antigens - Targets Of Tumor Reactive T Cells, TCR Diversity Among Tumor Reactive T Cells, Effect of TCR V Gene Usage on Tumor Antigen Recognition.	2					
	16	Factors that influence T cell recognition of tumor cells.	2					
IV	Mecha	nisms of the Immune Response to Cancer						
	17	Danger Theory, Role of Gene Rearrangement in the Tumor Response	2					
	18	Heat Shock Proteins as Regulators of the Immune Response, Inflammation and Cancer.	2					
	19	Mechanism of Tumor Evasion - Escaping the Immune Response.	2					
	20	Changes in tumor cells - Selection of Resistant Tumor Cells, Decreased HLA Antigen and Co-stimulatory Signal Expression. Changes in cell mediated immune response in cancer -	2					
	21	Changes in Antigen Presenting Cells, Induction of Regulatory T Cells, Apoptosis of Effector T Cells, Changes in T Cell Signal Transduction, Mechanisms Leading to Alterations in T Cell Signal Transduction Rational Treatment of Cancer,	2					
	22	Manipulation of Co-Stimulatory Signals, Enhancement of APC Activity, Cytokine Therapy, Monoclonal Antibodies, Drug therapy, Radiotherapy. Cancer Immunotherapy	2					
V	Chemo	prevention and treatment						
(Open		1						
module)	23	Diet and cancer, Chemo prevention, Molecular targets for chemoprevention. Chemoprevention of cancer through dietary and nutritional agents.	4					
	24	Antimutagens and carcinogen-blocking agents - isothiocyanates, oltipraz, other organosulfur compounds, Anti proliferative agents. Antitumor agents. Antibiotics, toxin immune conjugates and immune modulators.	4					
	25	Current Topics in Cancer Research – Cancer Vaccine Development	4

Semester	VIII				
Academic	400				
Level					
Course Details	Credit	Lecture per	Tutorial	Practical	Total Hours
		week	per week	per	
				week	
	4	4	-	-	60 hrs
Pre-requisites	+2 level Science	e with Biology	y and chemist	ry backgrou	ind
Course	This course introduces the fundamentals of endocrinology, covering the				
Summary	organization of	f the endocrin	e system, ho	rmone clas	sification, and their
	effects on tissu	ie response. It	further explo	ores the gen	neral mechanisms of

hormone action, including hormone receptors, second messenger systems,
and various hormones' biosynthesis, chemistry, and physiological
functions. Additionally, it addresses hormonal effects, regulation, and
disorders of endocrine glands, encompassing feedback mechanisms,
hormonal disorders such as thyroid diseases, diabetes, adrenal disorders,
and growth hormone-related conditions.

Course Outcomes (CO):

After the successful completion of the course, a student will be able to:

CO	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	Gain an in-depth understanding of basic principles, concepts, various classes and the chemistry of hormones.	U	C	Instructor- created exams / Quiz
CO2	Understand the mechanisms of action and the concept of second messengers	U	С	Practical Assignment / Observation of Practical Skills
CO3	Familiarize with various endocrine glands with emphasis and focus on individual tissues and their respective hormones including the pituitary, pancreatic, adrenal, thyroid and reproductive systems	A	С	Seminar Presentation / Group Tutorial Work
CO4	Attain an idea of the site of biosynthesis of various hormones and acquire a thorough comprehension of the physiological functions of important hormones.	Α	C	Instructor- created exams / Home Assignments
CO5	Familiarization of hormonal effects and feedback mechanisms	А	С	One Minute Reflection Writing assignments
CO6	Develop the ability to integrate across multiple endocrine systems to better understand the complexity of endocrine-related disorders.	An	С	Viva Voce

Module	Unit	Content	Hrs			
Ι	Intro	duction to Endocrinology				
	1	Organization of endocrine system- major glands of endocrine system	3			
	2	Chemical Classification of Hormones-Peptide, amino acid derived and steroid hormones.	2			
	3	Effects of Hormone Concentrations on Tissue Response	2			
II	Gene	ral mechanism of hormone action				
	4	Mechanism of action of different hormones – Peptide hormones and steroid hormones	3			
	5	Hormone receptors and target tissues	2			
	6	Hormones that bind to nuclear receptor proteins	2			
	7	Hormones that use second messengers- Adenylate Cyclase—Cyclic AMP Second Messenger System, Phospholipase C-Ca ²⁺ Second- Messenger System, Tyrosine Kinase Second-Messenger System	3			
III	Site	of biosynthesis, chemistry and major physiological functions of				
	various Hormones					
	8	Hypothalamic Control of the Anterior & Posterior Pituitary, Releasing and Inhibiting Hormones, Hormones of anterior and posterior pituitary gland	2			
	9	Growth hormone (GH)	2			
	10	Thyroid-stimulating hormone (TSH)	2			
	11	Adrenocorticotropic hormone (ACTH)	2			
	12	Follicle-stimulating hormone (FSH), Luteinizing hormone (LH), Prolactin (PRL)	2			
	13	Feedback Control of the Anterior Pituitary	2			
	14	Vasopressin & oxytocin	2			
	15	Hormones of pancreas (glucagon, insulin),	2			

	16	Hormones of adrenal gland- adrenal cortex (corticosteroids - mineralocorticoids, glucocorticoids, androgens) & medulla (epinephrine and norepinephrine),	3
	17	Hormones of the thyroid gland- tetraiodothyronine (T_4) , or thyroxine triiodothyronine (T_3)	2
	18	Hormones of gastrointestinal tract (gastrin, secretin and cholecystokinin).	2
IV	Horn	nonal effects and regulation	
	19	Feedback mechanisms, Signal transduction pathways for steroidal and non-steroidal hormones	2
	20	Permissive, additive, and synergistic actions of hormones- Permissive actions of steroid hormones	2
	21	Role of protein kinases and phosphoprotein phosphatases in hormone action	2
	22	Additive effects of hormones- epinephrine and glucagon, Synergism- FSH and LH, Receptor regulation	2
V	Disor	ders of endocrine glands	
(open module)	23	Causes, risk factors, symptoms associated with endocrine disorders, prevention & treatment of endocrine disorders	3
	24	Diseases of the thyroid gland- iodine-deficiency goiter, Comparison of Hypothyroidism and Hyperthyroidism, myxedema, Graves' disease, cretinism,	3
	25	Diseases of the Pancreas- Diabetes	2
	26	Diseases of the adrenal gland- Addison's disease, Cushing's disease	2
	27	Growth hormone- Gigantism, acromegaly, dwarfism, Androgens - Polycystic ovary syndrome (PCOS)	2

Module	Unit	Content	Hrs
I	Intro	duction to food chemistry	
	1	Chemical reactions in food processing and storage: Maillard reaction, lipid oxidation, enzymatic browning.	2
	2	Biochemistry of food spoilage, Biochemical changes and changes in the quality characteristics of food structure, taste, color, aroma, nutritional value – Organoleptic control.	2

	3	2
	Browning reaction in foods: Enzymatic and non-enzymatic browning in foods of vegetable and animal origin during storage and processing of foods.	2
II	4 Basic principles for the preservation of food and its ingredients Fundamentals of Food Chemistry- Carbohydrates, Proteins, Lipids and	2
	Vitamins	
	5 The basic ingredients of food – their role in food industry.	2
	6 Sugar, starch, cellulose, glucans, hemicelluloses, gums, pectic substances, polysaccharides.	2
	7 Resistant Starches and Dietary Fibre – Definition, Sources and Functions. Modified starches.	2
	8 Concept of protein quality, dietary requirements, deficiency symptoms, Single cell proteins. Stress and Anti-freeze Proteins, Protein Isolates and Concentrates.	3
	9 Egg proteins, meat proteins, fish muscle proteins, Oil seed proteins and cereal proteins.	2
	10 Classification and physico-chemical properties of food lipids, Refining of crude oils, hydrogenation and winterization. Vegetable and animal fat, margarine, lard, butter. Frying and shortening. Flavor changes in fats and oils.	2
	11 Lipid oxidation, factors affecting lipid oxidation, auto oxidation, biological significance of auto-oxidation of lipids.	2
	12 Role of vitamins in food industry, effect of various processing treatments and fortification of foods. Food sources, effects of deficiency.	2
	13 Role of minerals in food industry, effects of various processing treatments. Effects of excess, if any, and deficiency.	2
	14 Emulsion: Definition, Theory, Emulsifiers: Properties, role & action in stabilizing an emulsion.	2
III	Microbiological Aspects of Food Safety	
	15 Microbial hazards in food: bacteria, molds, yeasts,	2
	viruses. Fermentations: Exploitation of the action of micro-organisms	
	and enzymes in food production.	

	16	Microbiological testing methods: plate count methods, PCR-based techniques, immunological assays.	2
	17	Emerging issues in food microbiology: antimicrobial resistance, foodborne pathogens.	2
IV	Food	Additives and Contaminants & Quality Control Systems	
	18	Types and functions of food additives: preservatives, antioxidants, colorants, flavour enhancers.	2
	19	Food contaminants: pesticides, heavy metals, mycotoxins.	2
	20	Food technologies: pasteurization, sterilization, cooling, freezing, irradiation, canning, food dehydration.	2
	21	Principles of Total Quality Management (TQM) and Six Sigma in the food industry. Controlled Modified Atmosphere Packaging (MAP) and smart packaging.	2
	22	Implementation of Good Manufacturing Practices (GMP), ISO 9001 and Hazard Analysis and Critical Control Points (HACCP). Regulatory frameworks for food safety and quality assurance including FDA, USDA, and EU regulation.	2
V (Open	Pract		30Hrs
module)	1	Chemical Analysis of Lipids: Determination of Iodine value, saponification value, peroxide value and Free Fatty Acid.	
	2	Analysis of Protein: Estimation of protein by Kjeldahl's methods.	
	3	Analysis of Water: Estimation of Total solids, Acidity of water, Alkalinity of water, Determination of Chloride, and Hardness of water.	
	4	Demonstration of Paper chromatography.]
	5	Determination of ash content

Module	Unit	Content	Hrs
Ι	Intro	duction to Food Adulteration	
		Definition and types of food adulteration. Examples of common adulterants and their effects on food quality.	2
	2	Motives behind food adulteration. Impact of food adulteration on health and society.	2
	3	Common Adulterants and detection methods. Detection of adulteration in milk and dairy products, oils and fats, spices and condiments, grains, cereals and beverages (e.g., juices, alcohol).	2
II	Bioch	nemical Techniques to evaluate adulteration	
	4	Overview of biochemical reactions involved in adulteration tests. Factors influencing test sensitivity and specificity.	2
	5	Selecting appropriate tests for different types of adulterants. Factors influencing test accuracy and reliability.	2

	6		2
	6	Detection of Carbohydrate Adulterants: Tests for sugar adulteration:	2
		Benedict's test, Fehling's test, and Barfoed's test.	
	7	Detection of starch adulteration: Iodine test, Molisch's test, and	2
	0	Reducing sugar test.	2
	8	Analysis of Fat Adulterants. Evaluation of mineral adulterants: Ash content determination.	2 2
	9 10	Evaluation of mineral adulterants: Ash content determination.	2
	10	Examination of Vitamin Adulteration. Methods for detecting vitamin adulterants	2
	11	Detection of heavy metals: Chromatographic techniques, Spectrophotometry.	2
	12	Vitamin fortification and adulteration in fortified	3
		foods. Chromatographic techniques (e.g., HPLC, GC) for precise detection and quantification

Pre-requisites	+2 level Scienc	+2 level Science with Biology and chemistry background							

Course	This course covers the foundational principles of sports nutrition, including
Summary	nutrient timing, macronutrient requirements, and micronutrient
	considerations for athletes. It delves into energy metabolism during
	exercise, outlining nutrition strategies to support aerobic and anaerobic
	activities and discussing pre- and post-exercise nutrition guidelines. The
	importance of hydration and electrolyte balance is emphasized, with
	practical strategies provided for maintaining optimal fluid and electrolyte
	levels. Applied sports nutrition topics include periodization, psychological
	aspects of nutrition, and the evaluation of research findings and sports
	supplements. Special considerations for different sports and populations,
	including endurance athletes, team sports, and special populations like
	youth and older athletes, are also addressed, along with the role of
	psychology in nutrition and performance. Practical applications and case
	studies round out the curriculum, providing students with a comprehensive
	understanding of sports nutrition principles and their real-world
	applications.

Course Outcomes (CO):

After the successful completion of the course, a student will be able to:

CO	CO Statement	Cognitive	Knowledge	Evaluation
		Level*	Category#	Tools used
CO1	Understand the role of nutrition in optimizing athletic performance.	U	С	Instructor- created exams / Quiz
CO2	Identify the specific nutrient needs of athletes based on their training intensity, duration, and sport.	U	С	Practical Assignment / Observation of Practical Skills
CO3	Analyze various dietary strategies to support energy	U	С	Seminar Presentation /

.

	metabolism and muscle recovery.			Group Tutorial Work			
CO4	Explore the importance of hydration for athletic performance.	U	С	Instructor- created exams / Home Assignments			
CO5	Develop personalized nutrition plans for athletes to enhance performance, recovery, overall health and evaluate the effectiveness and safety of popular sports supplements.	U	С	One Minute Reflection Writing assignments			
CO6	Apply evidence-based nutrition principles to address common challenges faced by athletes, such as hydration, weight management, and travel.	Ар	Р	Viva Voce

Course	This course on	Fish Biochem	istry delves in	nto the cher	nical composition of			
Summary	fish, covering	major and 1	minor compo	onents, pro	ximate composition			
	including wate	r, protein, lip	id, minerals,	and vitam	ins. It explores fish			
	muscle structur	e, proteins suc	h as myoglob	in and enzy	mes, lipid types and			
	variations, and	variations, and the role of minerals, vitamins, and carbohydrates in fish						
	nutrition. Add	itionally, it i	investigates j	post-morten	n changes in fish,			
	including rigor	mortis and fla	vor alteration	s.				

Course Outcomes (CO):

After the successful completion of the course, a student will be able to:

CO	CO Statement	Cognitive	Knowledge	Evaluation Tools
		Level*	Category#	used

CO1	Comprehend the major and minor components of fish, including proximate composition elements such as water, protein, lipid, and minerals. They will appreciate the significance of these components as quality and spoilage parameters in fish.	U	C	Instructor-created exams / Quiz
CO2	Explore the molecular organization of fish muscle, focusing on key protein components like actin, myosin, and actomyosin. They will also study the changes that occur during muscle contraction, gaining insights into the functional aspects of fish muscle.	U	С	Practical Assignment / Observation of Practical Skills
CO3	Gain proficiency in fractionating fish proteins, specifically sarcoplasmic, myofibrillar, and stroma proteins (connective tissue). They will understand the role of proteins such as heme proteins, enzymes, and their impact on post- mortem changes in fish.	U	Р	Seminar Presentation / Group Tutorial Work
CO4	Learn about the thermal and freeze denaturation of proteins and comprehend the functional properties of seafood proteins. Emphasis will be placed on solubility, emulsification, viscosity, water holding capacity, gelation, and texture profile analysis.	U	Р	Instructor-created exams / Home Assignments

CO5	Delve into various lipid types, fatty acids, and the biogenesis of polyunsaturated fatty acids. The physiological activities of polyunsaturated fatty acids and their benefits for human health will be highlighted.	U	Р	One Minute Reflection Writing assignments				
CO6	~ ~ ~	Α	Р	Viva Voce

Course				00	Aids, and Lifestyle				
Summary	Diseases cover	s a wide range	of topics esse	ential for un	derstanding physical				
					of health, the role of				
	nutrients in spo	orts performance	ce, ergogenic a	aids and do	ping, and the science				
	behind fitness	including ana	tomy and m	uscle funct	ion. Additionally, it				
	addresses lifes	tyle diseases a	such as diabe	etes, hypert	ension, and obesity,				
	focusing on the	ir characterist	ics, prevention	n, and mana	gement strategies.				

Course Outcomes (CO):

After the successful completion of the course, a student will be able to:

•

CO	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used		
CO1	Analyse the sports related medical issues from the perspective of biochemical and physiological sciences on various sports groups and deliver support to the coaches and athletes	U	C	Instructor-created exams / Quiz		
CO2	Be well conversant with the process of basic health issues and common injuries occurring as a result of continuous sports activities and unhealthy life style practices	U	С	Practical Assignment / Observation of Practical Skills		
CO3	Analyze and handle complex situations in sporting activities arising during the long term athlete development program.	U	Р	Seminar Presentation / Group Tutorial Work		
CO4	Create awareness regarding the effect of doping, doping control procedures and ergogenic aids	U	Р	Instructor-created exams / Home Assignments		
CO5	Analyze and apply current development and research works in the field of sport science and welcome new ideas in sports and have capability in out of box thinking.	U	Р	One Minute Reflection Writing assignments		
CO6	Prepare proper diet plan for specific nutritional requirements.	А	Р	Viva Voce		
# - Fa	emember (R), Understand (U ctual Knowledge(F) Concep cognitive Knowledge (M)					

Module	Unit	Content	Hrs		
Ι	Mean	ning and Importance of Health			
	1	Meaning of Health, Importance of Health, factors influencing Health	2		
		Status, Characteristics of healthy individual.			
	2	Physiological health, mental health, emotional health and social health.	2		
	3	First Aid: Definition and importance of first aid in modern life, types of	2		
		first aid. Reasons of sports injuries. Basic steps in safety measures			
		safety measures for the following (i) bites of animals, burns, control of			
		bleeding, cuts and wounds. Safety against drawning, artificial			
		respiration.			
	4	Metabolic Functions of key Organs during Exercise; Metabolic Factors	2		
		in Fatigue, Metabolic Adaptations to Endurance. Metabolic Response to			
		Exercises, Exercise and Lactate.			
II	Sport	ts Nutrition			
	5	Nutrients and nutritional Role of macro and micro nutrients: Water Requirements and Fluid Balance	2		
	6	Nutrition Supplements. Nutrients: Functions and Recommended Intakes, Healthy Eating and Balanced Diet, Fuel Sources for Muscle and Exercise. Food Energy and Expenditure.	3		
	7	Exclose. I ood Energy and Expenditure.	2		
	,	Nutrition and Immune Function in Athletes, Body Composition and Weight Management, Eating Disorders in Athletes			
	8	Intake of Carbohydrates, proteins and fats affecting performance. Energy intake pattern of athletes: Nutritional intake concerns for athletes in sport and exercise	2		
	9	Energy intake of athletes during training and for competition.	2		
	10	Vitamins and Minerals in exercise performance Vitamins: Types; mode of action; primary functions; excess vs. deficiency; Requirements for athletes.	2		
	11	Minerals: Types; mode of action; Primary functions; Excess vs. Deficiency; Role of increased intake of minerals in exercise performance.	2		
III		genic aids and Doping	2		
	12	The effects of ergogenic aids and nutritional supplements, effect of doping and doping control procedures.			
	13	Ergogenic Aids: Mechanical Aids; Nutritional Aids- Carbo-Loading, Fluids; Creatine, Carnitine, Amino Acids, Dietary Supplements; Antioxidants; Physiological Aids- Bicarbonate, Loading, Altitude Training.	2		
	14 History of Doping and Doping Control, the fundamental rights of athletes in doping trials the world anti-doping agency: transnational doping policy and globalisation; drug testing in amateur sports, the prohibited list of substances & methods.				

	15	Human Growth Hormone, Anabolic Steroids, Hormones and Related Substances, Beta-2 Agonists, Agents with Anti-Oestrogenic Activity, Diuretics and Other Masking Agents, Stimulants, Narcotic Doping Control.	2
	16	Anti-Doping Rules, WADA and IADA, regulation, IOC regulation, Ethical issues.	2
	17	Testing and Sample Analysis. In-Competition Testing, Out-of-Competition Testing.	2
	18	Anti-doping rule violations. Guidelines	2
	19	Blood Sample Collection, Urine sample collections, Sample collection personel, Breath Alcohol Testing, Implementing an Effective Testing Program. Laboratory Test Reports	2
IV	Scien	ce of Fitness	
	20	Anatomy of muscular system, structure of muscles and their kinds. Properties of muscles. Muscle work and, fatigue.	2
	21	Anatomy of respiratory organs, tissue and pulmonary respiration.	2
	22	Anatomy of heart, function of heart, heart beat, stroke volume, cardiac output.	3
V	Lifes	tyle diseases	
(open		-	
module)	23	Characteristics, Causes, Diagnosis, Prevention, and Management of lifestyle diseases: Diabetes mellitus, Hypertension, Atherosclerosis, Liver diseases, Kidney diseases, Obesity.	12

CO6	Describe the role of thermodynamic principles in biochemical pathways.	An	C	Viva Voce		
 * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C) # - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M) 						

Module	Unit	Content	Hrs		
Ι	Gene	ral Introduction & Laboratory Practices			
	1	Laboratory safety requirements & precautions.	2		
	2	Safe handling & disposals of chemicals, biological & other samples.	2		
	3	Radioactive materials.	2		
	4	Management of laboratory accidents & injuries.	2		
Π	II Water, Acids, Bases & Buffers				
	5 Dissociation of water, ionic product of water.				
	6 Concepts of pH, pOH, simple numerical problems of pH, determine pH using indicators, pH meter & theoretical calculations. Meanine and pKa values.				
	7 Electrolytes and dissociation of electrolytes, weak acids.		2		
	8	Concepts of acids and bases, shapes of titration curve of strong and weak acids and bases.	2		
	9	Buffers and buffer action. Buffers in the biological system.	2		
	10	Henderson-Hasselbalch equation with derivation. Simple numerical problems involving the application of this equation.	2		
	11	Molecular interactions (Brief study): Noncovalent interactions: Hydrogen bonding, Vander Waal interactions, electrostatic interactions, hydrophobic interactions, Covalent interactions.	2		
III	Solut	ions			

	24	Isotopes, isobars and isotones. Application of radioisotopes in biological system.	6
	23	Laws of thermodynamics- First, second, third and zero law. Enthalpy, entropy and free energy.	6
V (open module)	Ther	modynamics And Nuclear Chemistry	
	22	Catalysis - Catalyst - Autocatalyst - Enzyme catalyst - Promoters - Catalytic poisons – Active Centre - Differences between Homogeneous and Heterogeneous Catalysis - Industrial Applications of Catalysts.	3
	21	Donnan equilibrium & its application in the biological system.	2
	20	Chemical equilibrium and equilibrium constant. Law of mass action.	2
IV	Chen	nical Equilibrium & Catalysis	
	10	Principles of adsorption & partition.	2
	17	Elementary study of charge on colloids, Tyndall effect. Emulsion & emulsifying agents.	2
	16 17	Meaning of true solution, colloidal solution, and coarse suspension. The distinction between lyophilic and lyophobic sols.	2
	15	Relationship of osmotic pressure to gas laws. The general equation for dilute solutions, Influence of ionization & molecular size on osmotic pressure.	2
	14	Definition of osmotic pressure, isotonic, hypotonic & hypertonic solutions	2
	13	Principle of diffusion & osmosis. Biological importance of osmosis.	2
	12	Meaning of normality, molarity, molality, percentage solution, mole fractions: simple numerical problems from the above.	3

After the successful completion of the course, a student will be able to:

Module	Unit	Content	Hrs
I	Structure, chemistry and function of plant cell		
	1	An overview of plant cell and subcellular components of the plant cell.	2
	2	Structure and organization of the primary cell wall.	1
	3	Structural features, unique functional roles and chemical composition of membranes of plant cell organelles; nucleus, endoplasmic reticulum,	2

		microtubules, plant microbodies, plasmalemma, plastid, vacuole, and Golgi body.		
	4	Importance of sucrose as the transport form of sugar in plants.	2	
	5	A brief account of the separation of plant subcellular constituents.	1	
Π	Plant physiology			
	6	Photosynthesis –structure, organization and composition of chloroplast membrane. Different photo systems; Light and dark reactions. Photosynthesis in C-4 plants.	2	
	7	Photorespiration and compensation point.	2	
	8	CAM plants		
	9	C-2 and C-3pathways.		
	10	Biochemistry of Rubisco and its activation.		
	11	Nitrate metabolism: Nitrate reduction- nitrate reductase- physiology and regulation; nitrite metabolism (nitrite reductase).	2	
	12	Nitrogen fixation: Nitrogen cycle; symbiotic and non-symbiotic nitrogen fixation. Biochemistry of nitrogen fixation	2	
Ш	Plant growth regulators, senescence and seed dormancy			
	13	Plant growth regulators: Auxins, cytokinins, abscisic acid, and related compounds, gibberellins, and ethylene]	
	14	Chemical nature, physiological roles, distribution in plants, mode of action of different growth regulators.		
	15	Biochemical aspects associated with fruit ripening.	2	
	16	Senescence	2	
	17	Seed dormancy and germination	2	
IV	Secondary metabolites			
	18	Secondary plant products: major chemical classes of secondary metabolites.	2	

	19	Role of secondary metabolites in plants. Biosynthesis, chemistry and functions;	2
	20	Nitrogen containing compounds: Alkaloids and its major classes with example -caffeine, theophylline, nicotine and caryophyllene, steroid alkaloids.Non protein amino acids, Amines and Cyanogenic glycosides.	2
	21	Terpenoids: isoprene rule, mono, di, sesqui, tri, tetraterpenes and poly terpenes with example, important members and their functions.	2
	22	Phenols: simple phenols, phenolic acids, phenyl propane, coumarins, phenolic glycosides, flavonoids, lignins and tannins.	
V	Func	tions and applications of secondary metabolites	
(open module)	23	Importance of secondary metabolites: uses of secondary metabolites to the producer plants: protection of the plants from predators.	1
	24	Uses of plant secondary metabolites to man; as biologically active compounds in mammalian metabolism, as drugs, as precursors of drug in pharmaceuticals, as natural pesticides/ insecticides and other uses.	1
	25	Allelopathy	1

Course	This course in	Neurobiochem	nistry delves i	nto the intr	icate organization of			
Summary	the nervous sys	stem, covering	topics such	as the struc	ture and function of			
	neurons, synap	otic transmissi	on, neurotran	smitters, m	emory mechanisms,			
	and neurologic	and neurological disorders. From the molecular basis of learning to the						
	biochemical un	derpinnings of	f neurodegene	erative disea	ases like Parkinson's			
	and Alzheime	r's, students	explore the	fascinating	interplay between			
	biochemistry and	nd brain functi	on in health a	nd disease.				

Course Outcomes (CO):

After the successful completion of the course, a student will be able to:

CO	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	Demonstrate a deep understanding of the central and peripheral nervous systems.	U	C	Instructor- created exams / Quiz
CO2	Acquire knowledge of neurotransmitter classification,	U	С	Practical Assignment /

•

	synthesis, storage, release, and the chemistry behind key neurotransmitters.			Observation of Practical Skills
CO3	Develop proficiency in explaining the structure of synapses, transmission events across synapses, membrane potential dynamics, action potential generation, and the neuromuscular junction.	U	С	Seminar Presentation / Group Tutorial Work
CO4	Gain insight into the biochemical basis of memory, including short-term and long-term memory mechanisms, synaptic plasticity, and the role of neurotransmitters, receptors, and signaling molecules in learning and memory processes.	U	С	Instructor- created exams / Home Assignments
CO5	Develop a comprehensive understanding of the biochemical basis of neurodegenerative diseases and their implications for brain function.	U	С	One Minute Reflection Writing assignments
CO6	Apply their understanding of neurobiochemistry to interpret brain imaging techniques such as EEG and understand the biochemical basis of pharmacological interventions for neurological disorders, including antidepressants and hallucinogenic agents.	Ар	Р	Viva Voce
	emember (R), Understand (U), Apply (Ap)	-		
	ictual Knowledge(F) Conceptual Knowled	ge (C) Procedu	ural Knowledg	je (P)
Metac	cognitive Knowledge (M)			

Module	Unit	Content	Hrs				
Ι	Organization of Nervous System						
	1	Central Nervous System -Brain -overview(forebrain, midbrain and hind brain)and Spinal cord	2				
	2	Peripheral nervous system:somatic and autonomous nervous system	2				
	3	Neuron-structure, classification and functions,	2				
	4	Neuroglia-classification and functions, Cerebrospinal fluid	2				

	5	Formation, structure and biochemistry of myelin	2
	6	Chemistry of major brain lipids, developmental changes, lipid	3
		composition, biosynthesis and catabolism of major lipids,	
		characteristics of brain lipids, regional variations.	
	7	Blood-Brain barrier	2
	8	Blood-CSF barrier	2
II	Syna	ptic transmission	
	9	Synapse-structure and types, correlation of structure and function at the synapse.	2
	10	Transmission across the synapse, pre and post synaptic events,	2
	11	Membrane potential in the steady state, action potential and propagation of nerve impulse.	3
	12	Neuromuscular junction.	2
III	Neur	otrasmitters	
	13	Neurotransmitters, Classification, synthesis, storage and release.	2
	14	Acetylcholine, Dopamine, Norepinephrine, Serotonin, Histamine, Epinephrine, Gamma-aminobutyric acid, Glycine, Glutamate, Aspartate, NO2, and CO– Chemistry of neurotransmitters.	3
	15	Neuropeptides: Classes of neuropeptides	2
	16	Structure of neurotransmitter receptors.	2
IV	Basis	s of Memory	
	17	Learning and memory	2
	18	Mechanism of short term memory and Long Term Potentiation.	3
	19	NMDA and AMPA glutamate receptors.	2
	20	Retrograde messengers in synaptic transmission.	2
	21	Role of CAM kinase II, Calcium, protein kinases, cAMP, NO, Calpain and other proteins in memory and learning process.	2
	22	Synaptic plasticity	2
V		ological disorders	1
(open	23	Neurotoxic agents and diseases related to them	3
module)	24	Antidepressants and hallucionogenic agents.	2
	25	Biochemical theories of mental disorders and muscular dystrophy.	2
	25 26	Biochemical theories of mental disorders and muscular dystrophy. Neurodegenerative Disorders: Parkinson's, Alzheimer's disease, amyotrophic lateral sclerosis, senile dementia.	2 3

Module	Unit	Content	Hrs						
Ι	Evolu	itionary aspects of Development							
	1	Concept and definition of Development, Importance of studying the	2						
		evolution of developmental processes, Historical perspective on the							
		integration of evolution and development							
	2	Genetic Basis of Evolutionary Change: Role of mutations in generating genetic variation, Evolutionary conservation and divergence of key developmental genes	3						
	3	Comparison of body plan diversity in animals, Evolutionary transformations in body symmetry, Emergence of novel body plans and their adaptive significance.	2						
	4	Variations in reproductive modes (e.g., oviparity, viviparity), Evolutionary adaptations in reproductive structures and behaviours.	2						
	5	Comparative analysis of embryonic development in different animal groups	2						
	6	Evolutionary trends in embryogenesis, Homology and analogy in embryonic structures.	2						
II	Model Organisms for studying Developmental Biology								
	7	Definition and characteristics of model organisms.	2						
	8	Importance of using model organisms in developmental biology research, Criteria for selecting suitable model organisms.	2						
	9	Advantages, key features, applications and limitations of <i>Drosophila, C.</i> <i>elegans</i> , zebrafish and mice as model organisms for studying various aspects of animal development.	3						
III	Embi	ryonic Development							
	10	Overview of male and female reproductive system and germ cells	2						

	11	Events in fertilization, formation of zygote.	2					
	12	Early embryonic development: Cleavage-types and mechanism.	2					
	13	Formation of blastula, positional labels	2					
	14	Gastrulation, formation of germ layers	2					
	15	Neurulation	2					
	16	Cell migration and tissue morphogenesis, organogenesis and	2					
	10	growth.	2					
IV	Cellu	lar mechanisms in Development						
	17	Totipotent, unipotent and pleuripotent cells, Fate of embryonic cells and	2					
		fate map.						
	18	Events in Cell differentiation: Cellular commitment, Cell specification (autonomous, conditional and syncitial),	3					
	19	Progressive determination and its mechanisms,	2					
	20	Pattern formation and its mechanisms,	2					
	21	Pattern formation in Drosophila, maternal effect genes (Bicoid, Hunchback, Nanos and Caudal) and their functions.						
	22	Role of various signaling pathways (e.g., Wnt, Hedgehog, Notch) in regulating developmental processes.	2					
V	Rege	neration						
(open module)	23	Definition of regeneration, differentiating regeneration from repair and healing processes, regeneration in simple organisms like hydra and planarian worms.	3					
	24	Types and mechanisms of regeneration (epimorphosis, morphallaxis and compensatory), Tetrapod limb regeneration.	2					
	25	Environmental factors affecting regeneration, Hormonal regulation and its role in regeneration.	2					
	26	Genetic and epigenetic factors influencing regenerative capacities.	2					
	27	Regenerative medicine, Applications of regenerative medicine in human health, Stem cell therapies and tissue engineering, Challenges and prospects in regenerative medicine.	3

Summary	·	•			osome theory, gene				
					vill delve into topics				
		such as sex determination, sex-linked characteristics, and the application of							
	U	dge in medical	science throu	igh pedigree	e analysis and human				
	cytogenetics.								

Course Outcomes (CO):

After the successful completion of the course, a student will be able to:

СО	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	Demonstrate a comprehensive understanding of classical genetics, molecular genetics, and evolutionary genetics, including the molecular basis of heredity and the historical context of genetic studies.	U	С	Instructor- created exams / Quiz
CO2	Gain proficiency in applying Mendel's principles of heredity, including understanding monohybrid and dihybrid crosses, inheritance patterns in humans, and the chromosome theory of heredity.	U	С	Practical Assignment / Observation of Practical Skills
CO3	Acquire knowledge of gene interactions such as allelic interactions, epistasis, and degrees of gene expression, as well as the	U	С	Seminar Presentation / Group Tutorial Work

•

	inheritance of traits influenced by cytoplasmic factors and maternal effects.						
CO4	Analyze the types of chromosomal mutations, aneuploidy, and polyploidy, and be able to analyze pedigrees to infer patterns of inheritance, including autosomal dominance, autosomal recessive, and X-linked recessive traits.	An	С	Instructor- created exams / Home Assignments			
CO5	Become familiar with the mechanisms of sex determination in various organisms, the inheritance patterns of sex-linked characteristics, and the concept of dosage compensation for X-linked genes.	U	С	One Minute Reflection Writing assignments			
CO6	Apply genetic principles to analyze human karyotypes, understand the significance of chromosomal variations in medical science, and interpret pedigree data for clinical diagnosis and genetic counseling.	Ар	С	Viva Voce			
 * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C) # - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M) 							

Module	Unit	Content	Hrs					
Ι	Introduction to Genetics							
	1	The molecular basis of Heredity– an overview of the early studies of DNA.	2					
	2 Definition and overview of Classical Genetics							
	3	Definition and overview of Molecular Genetics	2					
	4	Definition and overview of Evolutionary Genetics	2					
	5	Model genetic organisms (brief outline with examples).	2					
II	Mend	Ielian Genetics & Chromosome Theory						

	6	Basic principles of heredity- Mendel's principles	2
	7	monohybrid, dihybrid and test cross (pea plant),	2
	8	Applications of Mendel's principles	2
	9	Chromosome Theory of Heredity (Sutton-Boveri)	2
	10	Inheritance patterns, the phenomenon of Dominance	2
	11 F =4	Inheritance patterns in Human (Autosomal Dominant, Autosomal Recessive, X-linked Dominant, X-linked Recessive, Mitochondrial- one example for each single-gene disorders).	3
III		nsion of Mendelian Genetics	_
	12	Gene interaction: Allelic gene interaction (complete dominance, co- dominance and incomplete dominance- brief outline with example).	2
	13	Multiple alleles- ABO blood groups in humans	3
	14	Epistasis- dominant & recessive epistasis (brief outline with example).	2
	15	Degrees of gene expression: Penetrance, expressivity, genetic anticipation and genomic imprinting (definition with examples).	2
	16	Cytoplasmic inheritance, extra nuclear inheritance (mitochondrial, chloroplast).	2
	17	Maternal inheritance (kappa particles in paramecium, male sterility in maize) and maternal effect (shell coiling in snail).	3
IV	Chro	massenal variation in number & structure	
	18	Types of chromosome mutation: chromosome rearrangements (duplication, deletion, inversion and translocation	3
	19	Aneuploidy, polyploidy (Brief outline	2
	20	Pedigree analysis and applications -autosomal dominance, autosomal recessive, X-linked recessive (brief outline).	2
	21	Human karyotype	2
	22	Use of Human cytogenetics in Medical science	2
V	Sex d	letermination & Sex linked characteristics	
(open module)	23	Sex determination in <i>Drosophila melanogaster</i> and human	4
	24	Sex linked characteristics (eye colour of drosophila).	4

25 Dosage compensation of X-linked genes	4

Module	Unit	Content	Hrs
Ι	Fund	amentals of Ecology & Environmental Science	
	1	The Environment: Physical environment; biotic environment; biotic and abiotic interactions.	2
	2	Physico-chemical and Biological factors in the Environment (Abiotic and Biotic components)	2
	3	Pathways in Ecosystems (food chain, food webs, ecological pyramids, Mass and energy flow)	2
	4	Concept of Biomes their classification and distribution; Characteristics of different biomes: Tundra, Taiga, Grassland, Deciduous forest, Chapparal, Savanna, Tropical rain forest, Highland Icy Alpine biome.	3
	5	Theories of biological evolution (basic outlines of Lamarkism, Darwinian theory, Mutation theory and Hardy-Weinberg principle).	3
II	Envir	ronmental Pollution	
	6	Environmental pollutants, their classification, sources and impact on living beings.	2
	7	Effect of various pollutants on animal, plant and microbial metabolism;	2
	8	Pollutant detoxification mechanism in animals, plants and microbes.	3
	9	Biochemical basis of pollutant tolerance.	2
	10	Soil enzymes, their source and role in the environment.	2
III	Cont	rol, Remediation and Management	
	11	Air pollution control technologies: Sampling of gases and vapours, Sampling of particulate pollutants.	2
	12	Prevention and control techniques of gaseous pollutants (Combustion, Absorption & Adsorption);	2
	13	Prevention and control methods of particulates matter (Settling Chambers, Cyclone Separators, Wet Collectors (Scrubbers), Bag Filters and Electrostatic Precipitators);	3

r			
	14	Stack monitoring; Air quality standards, Indian National Ambient Air quality standards, Air pollution index.	2
	15	Waste water treatment process and Water Pollution and Resource Management: Waste water treatment processes (Characteristics of domestic, industrial and municipal wastewater, primary, secondary and tertiary treatment methods); Sludge digestion processes;	2
	16	Drinking water treatment processes (Ion exchange, Reverse Osmosis, Ozonisation, Carbon Adsorption, Membrane Processes, UV treatment and other advanced treatment methods)	2
	17	Water conservation methods	2
IV	Envi	ronmental Toxicology	
	18	Definition and basic concept of toxicology; Definition of toxins, xenobiotics;	2
	19	LADME or ADME scheme of toxico kinetics (Liberation-routes of exposure, absorption, distribution, metabolism, and excretion).	2
	20	Duration and frequency of exposure (Acute, Sub-acute, Chronic);	2
	21	Statistical concept of LC50, LD50; Dose response relationships and curves; Therapeutic index,	2
	22	Factors that influence toxicity (biological, chemical, ecological); Biotransformation, Bio-accumulation, Bio-magnification.	2
V (open	Envi	ronmental Hazard, Risk & Disaster Management	
module)	23	Disaster introduction; Disaster Management Capability: Vulnerability and risk, Hazard zonation and mapping- Risk Reduction Measures.	3
	24	Earthquake, Volcanic activity, Tsunami, Landslide, Tropical Cyclones, Flood and drought.	3
	25	Environmental and Occupational Health Hazards: Causes of disease outbreak; Specific causes, consequences and mitigation of occupational diseases (Asbestosis, Silicosis), vector borne and infectious diseases (Dengue, Chikungunya, Plague, Swine flu, Bird flu, AIDS, Ebola).	4
	26	Role of WHO in disease control.	2

Module Unit Content Hrs

Ι	Intro	duction to Environmental Studies	
	muro	duction to Environmental Studies	
	1	Definition, structure and components of Environment	2
	2	Atmosphere, Hydrosphere, Lithosphere, Biosphere,	2
	3	Multidisciplinary nature of Environmental Studies	2
	4	Scope and importance of Environmental Studies	2
II	Natu	ral Resources	
	5	Types - Renewable resources and non-renewable sources. Natural resources and associated problems.	2
	6	Forest resources; Use and over exploitation, deforestation –conservation strategies.	2
	7	Water resources- use and over-utilization of surface and ground water, water conservation, rain water harvesting , dams –benefits & problems.	3
	8	Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity.	3
	9	Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.	2
	10	Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.	2
III	Ecos	ystems	
	11	Concept of an ecosystem.	2
	12	Structure and function of an ecosystem.	2
	13	Energy flow in the ecosystem	3
	14	Characteristic features, structure and function of Forest ecosystem,	2
	15	Characteristic features, structure and function of Grassland ecosystem	2
	16	Characteristic features, structure and function of Desert ecosystem	2
	17	Characteristic features, structure and function of Aquatic ecosystems (ponds, lakes rivers, oceans).	2

IV	Biod	iversity and its conservation	
	18	Introduction- Definition: genetic, species and ecosystem diversity.	2
	19	Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.	2
	20	Biodiversity at global, national and local levels.	2
	21	Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man wildlife conflicts, Endangered and endemic species of India.	3
	22	Conservation of biodiversity; In-situ and ex-situ conservation of biodiversity.	2
V (open module)	Envi	ronmental concerns and Environmental Policies	
moune	23	Pollution, Ozone layer depletion,global warming, greenhouse effect, climate change	3
	24	Environment Laws: Wildlife Protection Act; Forest Conservation Act. Water (Prevention and control of Pollution) Act; Air (Prevention & Control of Pollution) Act; Environment Protection Act; Biodiversity Act,	3
	25	National Green Tribunal: Structure, composition and functions.	4
	26	International agreements: Montreal Protocol, Kyoto protocol and climate negotiations; Convention on Biological Diversity (CBD)	2

Module	Unit	Content	Hrs
Ι	Nutri	tional disorders	
	1	Overview of major and minor nutrient components in the	2
		diet.	
	2	Balanced diet and the concept of RDA.	2
	3	Nutrient deficiencies; Kwashiorkor and Marasmus,	2
		Scurvy, beri beri, pellagra and B12 deficiency,	
		Xerophthalmia and Night blindness, Vitamin D	
		deficiency, Vitamin K deficiency. Discuss with relation	
		to biochemical basis for symptoms	
	4	Mineral deficiencies related disorders	2
II	Metal	oolic and Lifestyle disorders	
	5	Obesity and eating disorders like Anorexia nervosa and Bullemia.	2
	6	Diabetes mellitus A metabolic syndrome and the	3
		relationship with hypertension, obesity, hypothyroidism	
		and stress	
	7	Cardiovascular disorders	2
	8	Atherosclerosis-defining the broad spectrum of ailments	3
		that fall in this category, understanding the factors that	
		contribute to the syndrome, stages of disorder and the	
		management of the condition.	
	9	Irritable bowel syndrome- biochemistry behind the	3
	-	disorder and the influence of diet, stress and environment	_
		on the condition	
III	Multi	factorial complex disorders and Cancer	
	10	Understanding the definition of multifactorial diseases.	2
		Polygenic diseases and the relationship of environmental	
		factors and genetic makeup in the onset of diseases	
	11	Cancer: characteristics of a transformed cell, causes and	2
		stages of Cancer	
	12	Molecular basis for neoplastic growth and metastasis,	2
		Proto-oncogenes and tumor suppressor genes; Cancer	
		causing mutations; Tumor viruses	
	13	Biochemical analysis of cancer; Molecular approaches to	2
		cancer treatment	
	14	Disorders of mood: Schizophrenia, dementia and anxiety	2
		disorders.	

	15	Polycystic ovarian syndrome, Parkinson's disease, ALS	2					
IV		Diseases due to misfolded proteins						
	16	Introduction to protein folding and proteosome removal	2					
		of misfolded proteins;						
	17	Etiology and molecular basis for Alzheimer's	2					
	18	Prion diseases	2					
	19	Huntington's	1					
	20	Chorea	1					
	21	Sickle cell anaemia	2					
	22	Thalassemia	2					
V	Pract	icals	30					
(open module)	1	Anthropometric measurements for normal and high risk						
		individuals and identifications for Kwashiorkor,						
		Marasmus and Obesity						
	2	Estimation of homocysteine levels in serum						
	3	Estimation of glycosylated hemoglobin						
	4	Permanent slides for different types of cancer						
	5	Diagnostic profile for assessment of CVS and Diabetes mellitus using case studies						
	6	Bone densitometry test demonstration (visit to a nearby clinic)

	11	Chemical equilibrium	1						
	12	Hydrogen bonding- importance in Biology	1						
	13	Water the universal biological solvent, Dissociation of water, Ionic product of water	4						
	14	Concepts of Acids, bases	1						
	15	Dissociation of weak acids, Titration curve	1						
	16	Concept of pH, POH buffers - physiological buffers, calculations	2						
	17	Henderson Hassel Balch equation, calculations	2						
IV	Unit								
	18	Biomembrane and transport, osmosis, diffusion, dialysis	2						

	19	Colloids: True solution, colloidal solution and suspension. Preparation of colloidal system, Classification of colloids: Lyophilic, lyophobic, macromolecular, multimolecular and associated colloids with examples. Properties of colloids:	3						
	20	Brownian movement – Tyndall effect – Electrophoresis. Emulsions. Applications of colloids: Delta formation, medicines, emulsification, cleaning action of detergents and soaps	3						
	21	Basic reactions of organic functional groups, OH, CO, CHO, COOH, NH2, Amide SH,	3						
	22	Redox reactions, decarboxylation, elimination, addition, substitution, condensation, isomerisation	3						
V	Practicals								
(open	ITaci		30 hrs						
module)	1	Scientific weighing using weighing bottle and electronic balance							
	2	Preparation of standard solutions							
	3	Percentage solutions W/V, V/V, W/W etc preparation							
	4	Molar and mole fraction - solutions- preparation							
	5	Normal solutions							
	6	Quantitative transfer of materials, accuracy in transfer (to find out percentage error.)

Semester	II								
Academic	100	100							
Level									
Course Details	Credit	Lecture per	Tutorial	Practical	Total Hours				
		week	per week	per week					
	4	3	-	2	45 T +30				
					P=75hrs				
Pre-requisites	+2 level Scienc	e with Biology	and chemistr	y background					
Course	It provides the l	learner an over	all knowledge	of biomolecul	e, its chemistry				
Summary	in detail.								

Course Outcomes (CO):

After the successful completion of the course, a student will be able to:

CO	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	Identify and differentiate between D and L isomers, epimers, and anomers in carbohydrates, xplain the concept of mutarotation and its significance.	U	C	Instructor- created exams / Quiz
CO2	Describe the structure of key monosaccharides, including glucose, fructose, galactose, and mannose, in both linear and cyclic forms.	U	С	Practical Assignment / Observation of Practical Skills
CO3	Understand glycosidic bonds in disaccharides. Explore the structures and importance of maltose, sucrose, lactose, and trehalose.	U	С	Seminar Presentation / Group Tutorial Work
CO4	Examine the structure and significance of homopolysaccharides such as cellulose, glycogen/starch, and chitin.	U	С	Instructor- created exams / Home Assignments
CO5	Identify and describe the structure of the 20 amino acids found in proteins.	U	С	One Minute Reflection Writing assignments

.

CO6	Analyze the levels of organization in proteins, including primary, secondary, and tertiary structures. Describe the structure of purines, pyrimidines, nucleosides, and nucleotides.	U	С	Viva Voce					
# - Fa	 * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C) # - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M) 								

Module	Unit	Content	Hrs
Ι	Carb	ohydrates	
	1	Carbohydrates- isomerism of carbohydrates - D and L isomerism,	3
		epimerism, anomerism - mutarotation. Optical isomerism - d and l	
		isomerism. Monosaccharides -Structure of following monomers (linear	
		and cyclic) - glucose, fructose, galactose, mannose.	
	2	Sugar derivatives - 2- deoxy β D ribofuranose. Reducing action of	2
		sugars, Reactions of monosaccharides	
	3	. Disaccharides - glycosidic bonds, structure and importance of the	2
		following disaccharides - maltose, sucrose, lactose, trehalose	
	4	Polysaccharides- structure and importance of following -	2
		Homopolysaccharides - cellulose, glycogen/starch, cellulose, chitin.	
		Heteropolysaccharides - heparin, sialic acids, hyaluronic acid.	
II			
	Amin	o acids and proteins	
	5	Structure of 20 amino acids occurring in proteins	2
	6	Color reactions of amino acids. zwitter ions and isoelectric pH; peptide	2
	0	bond; structure of proteins	2
	7	Levels of organization- Primary, secondary and tertiary structures.	2
	,	Proteins sequencing - Sanger's method and Edman's reaction.	2
	8	Reactions of proteins - Biuret, Lowry; Precipitation reactions (organic	3
	Ŭ	solvent precipitation - acetone, ethanol, salt precipitation - ammonium	C
		sulphate, heavy metal ions). Denaturation and renaturation of proteins.	
	9	Nucleic acids - structure of purines, pyrimidines, Nucleosides,	2
	7	Nucleotides ATP and cAMP	2
	10	RNA - structure and types. DNA - structure, and types, Watson and Crick	2
	10	Model.	2
III		Model.	
111	Tech	niques in Biochemistry	
	11	Chromatographic techniques - principles and applications of paper, thin	2
		layer, gas, HPLC, gel filtration, ion exchange.	
	12		2
		Colorimetry & Spectrophotometry	
	13		2
		Electrophoretic techniques - SDS - PAGE, native PAGE	
	14	Dialysis and Ultracentrifugation	2

	1.7		0					
	15	ELISA, RIA & Radio isotopic techniques	2					
	16	AAS	1					
	17	Mass spectrophotometry, MALDI, MS/MS	2					
IV								
	18	(Lipids - Structure and Classification of lipids - simple lipids (fats and	2					
		oils), compound lipids						
		(Phospholipids, Sphingo lipids).						
	19	Derived lipids (steroids - cholesterol, ergosterol).	2					
	20	Physiological functions of lipids	2					
	21	Fatty acids -Classification, saturated and unsaturated, essential and	2					
	21	nonessential - structures	2					
	22	Reactions of lipids - saponification and saponification number, rancidity,	2					
	22	acid number and iodine number	2					
V		Practicals	30					
v	rracucais							
	1		hrs					
	1	General reactions of carbohydrates (mono, di, and polysaccharides)						
		Molisch test, anthrone reaction, phenol -sulphuric acid reaction						
	2	Specific reactions of reducing sugars. Benedict's test, Fehling's test, picric						
		acid test, ferricyanide test. Seliwanoff's test and osazone reaction of						
		sugars.						
	3	Schematic analysis of biochemical solution containing a single						
		component; Carbohydrate (Glucose, Fructose, Lactose, Maltose, Sucrose,						
		and Starch.						
	4							
		Protein estimation (Biuret test, Lowry's test, solubility pattern,						
		xanthoproteic test, Millon's test, glyoxylic acid test, nitroprusside test,						
		precipitation by heavy metal ions and alkaloidal reagents).						
	5	Colorimetric estimations of Biomolecules						
			1

Datailad Syllabus:							

Module	Unit	Content	Hrs
Ι	Unit	[
	1	Introduction to Enzymology - apoenzyme, holoenzyme, prosthetic group; lock and key hypothesis and induced fit hypothesis. Classification of enzymes; Seven major classes of enzymes with one example each.	3
	2	Factors affecting velocity of enzyme-catalyzed reactions, Michaelis Menten equation, Km and its significance The Lineweaver- Burk plot. Enzyme specificity – group specificity, optical specificity, geometrical specificity and cofactor specificity	3
	3	Enzyme inhibition: Reversible and irreversible, determination of competitive inhibition using double reciprocal plot.	2
	4	Allosteric regulation of enzyme action with example. Activation of zymogen.	3
	5	Applications of enzymes - Industrial and medical (outline study only),	1
II	Unit]	Π	
	6	Introduction to metabolism, Anaerobic Metabolism of Carbohydrates.	3
	7	Reactions of glycolytic sequences with the names of enzymes and intermediates (without structures).	3
	8	Fate of pyruvate in alcoholic fermentation. Outline study of glycogenesis and glycogenolysis.	3
	9	Role of cyclic AMP and hormones in glycogen metabolism. Gluconeogenesis and pentose phosphate pathway (only outline without structures of intermediate	3

III	Unit	TIT					
	Unit	111					
	10Aerobic Oxidation of Carbohydrates, Decarboxylation of pyruvate – reactions of citric acid cycle (without structures of intermediates). Only outline expected.						
	11	Calculation of energy yield (as ATP) of aerobic and anaerobic oxidation of carbohydrates. Redox reactions and inhibitors of electron transport chain.	2				
	12	The mitochondria – arrangement of electron carriers in the electron transport chain.	1				
	13	Substrate level phosphorylation, Oxidative phosphorylation	1				
	14	Site of ATP formation in the chain. Chemiosmotic mechanism	1				
	15	Phosphate potential, principle of reversible reaction	1				
	16	Uncouplers & Inhibitors	1				
	17	Regulation of TCA cycle and Oxidative phosphorylation.	2				
	18	High energy compounds with an example.	1				
IV	Unit	ĪV					
	19	Metabolism of Lipids Outline study of β -oxidation scheme. ATP yield in β - Oxidation	2				
	20	Outline study of the cytoplasmic systems of fatty acid biosynthesis.	2				
	21	Metabolism of Amino acids and Proteins, Ketogenic and glucogenic amino acids. Metabolism of ammonia; Decarboxylation, deamination and transamination of aminoacids (without molecular mechanisms). Urea cycle& Regulation	3				
	22	Hormones: Classification of hormones based on chemical nature and mechanism of action; site of biosynthesis and important physiological functions of thyroxine, insulin, glucagon, epinephrine, glucocorticoids and growth hormones	2				
V	Pract		30				
		Quantitative analysis	hrs				
	1	Glucose estimation by Benedict's method, anthrone or arsenomolybdate methods					
	2	Amino acid estimation by Ninhydrin method					
	3	Protein estimation by Biuret method.					
	4	Protein estimation by Lowry et al. method.					
	5	5 Cholesterol estimation by Zak's method.					
	6	DNA estimation by diphenylamine method					
	7	RNA estimation by orcinol method					

	8

Assay of enzymes, (Trypsin or Amylase)

B.Sc Biochemistry Honors

First semester exam 2024

Model question paper

BCH1CJ101/BCH1MN100	
INTRODUCTION TO BIOCHEMISTRY	

Hrs- 2marks -70Part AAnswer Any 8, each question carries 3 marks1 What you mean by Hypothesis?2 Differentiate science and Pseudoscience?3 Importance of Repeatability in science?4 What you mean by accuracy?5 What are the contribution of Emil Fischer to Biochemistry?6 Differentiate Prokaryotes and Eukaryotes?7 Name few complex molecules of cell?8 Major carbon functional groups in organic molecules.9 What you mean by gram molecular weight?10 Role of ATP in cell?8X3= 24

Part B

Answer any six, each question carries 6 marks

- 11 Differentiate Theory and Law?
- 12 Explain deductive model in science with example?
- 13 What are the components of an Experiment and explain?
- 14 The history and principle of colorimeter.
- 16 Major subcellular organelles of animal cell
- 17 What are major biomolecules?
- 18 Explain steady state of chemical reaction?6x6=36

Part C

Answer any one, carries 10 marks.

19 Write an essay of molecular organization of animal cell?

20 Essay on various chemical bonds.

1x10=10

B.Sc Biochemistry Honors

Second semester exam 2024

Model question paper

BCH2CJ101/BCH2MN100 Cell Biology

Hrs-2

marks -70

Part A

Answer Any 8, each question carries 3 marks

1 Meaning of cell theory?

2 Differentiate animal cell and Bacterial cell?

3 Functions of endoplasmic reticulum?

4 Name the transport systems in cell?

5 Differentiate active and passive transport?

6 What are ion channels?

7 Functions of desmosomes?

8 Role of integrins in cell.

9 Meaning of apoptosis?

10 Features o cell necrosis?

8X3=24

Part B

Answer any six, each question carries 6 marks

11 Write note marker enzymes of animal cell?

12 Note on facilitated transport?

13 Explain cell -matrix interactions?

14 Explain the ultra-stricture of mitochondria.

16 Note on ionophores

17 Explain cell cycle analysis?

18 Details of mitosis?

Part C

Answer any one, carries 10 marks.

19 Write an essay on active transport?

20 Essay on cell cycle..

1x10=10

6x6=36

I Semester B.Sc. (CUFYUGP) Degree Examinations October 2024 BIOCHEMISTRY BCH1MN 101

Maximum Time: 2 hours

Maximum Marks: 70

Section A

[Answer All. Each question carries 3 marks] (Ceiling: 24 Marks)

- 1. Write the role of ribosomes in protein synthesis.
- 2. What is the importance of carbohydrates in living organisms
- 3. Define dialysis process
- 4. How do the biochemical aspects of diet and nutrition relate to energy levels in the body?
- 5.Define pH and explain its importance
- 6. What is the ionic product of water? Why is it significant?
- 7.Define Brownian movement
- 8. Define trace elements and provide examples of their biological significance.
- 9. What is delta formation?
- 10. Define acids and bases. Explain their dissociation in aqueous solutions

Section **B**

- [Answer All. Each question carries 6 marks] (Ceiling: 36 Marks)
- 11. Explain the role of trace elements in human health.
- 12. What is the Henderson-Hasselbalch equation and how is it used in biochemistry?
- 13.Explain Sodium Potassium ATPase
- 14. Differentiate between true solution, colloidal solution, and suspension
- 15. Explain differences between osmosis and diffusion.
- 16. Discuss the significance of proteins in biological systems
- 17. Discuss the significance of the golgi apparatus in the cell.
- 18. Explain the different types of chemical bonds and interactions in the body?

Section C

[Answer any one. Each question carries 10 marks] (1x10=10marks)

- 19. Explain the classification of colloids with examples
- 20. Describe the functions and sources of biomolecules of life.

II Semester B.Sc. (CUFYUGP) Degree Examinations October 2024 BCH2MN101: Life molecules

Maximum Time: 2 hours

Maximum Marks: 70

Section A

[Answer All. Each question carries 3 marks] (Ceiling: 24 Marks)

- 1. How is ELISA used in the detection of antigens?
- 2. Define isoelectric point and write down its significance
- 3. Comment on sphingolipids
- 4. Differentiate the structures of ribose and deoxyribose
- 5. What is denaturation of protein with respect to its structure
- 6. What is molar extinction coefficient? Write its significance.
- 7.Define mutarotation
- 8. Explain the principle of high-performance liquid chromatography.
- 9. Define saponification number
- 10. Differentiate between saturated and unsaturated fatty acids with examples.

Section **B**

[Answer All. Each question carries 6 marks] (Ceiling: 36 Marks)

- 11. Discuss the structure, types, and functions of RNA.
- 12. Discuss sequencing of proteins.
- 13. Explain the structure and functions of two homopolysaccharides.
- 14. Describe the principle and working of ion-exchange chromatography
- 15. Explain the methods to check the purity of fats or oil
- 16. Illustrate phosphodiester linkage.
- 17. Discuss thin layer chromatography.
- 18. Explain the different types of isomerism of carbohydrates

Section C

[Answer any one. Each question carries 10 marks] (1x10=10 marks)

19. Describe the different levels of structural organization of proteins.

20. Discuss the principles and applications of SDS-PAGE and native PAGE in protein analysis

I Semester B.Sc. (CUFYUGP) Degree Examinations October 2024 BCH1FM105: Food Biochemistry and Quality control

Maximum Time: 1.5 hours

Maximum Marks: 50

Section A

[Answer All. Each question carries 2 marks] (Ceiling 16 marks)

- 1. What is the significance of single cell proteins in the food industry?
- 2. What is meant by food spoilage?
- 3. Define resistant starches and dietary fiber.
- 4. What are the functions of antioxidants as food additives?
- 5. Identify two common food contaminants and their effects on food safety.
- 6. What is the principle of the plate count method?
- 7. Name two common bacteria cause food infection.
- 8. What are the symptoms of protein deficiency?
- 9. What is mean by antimicrobial resistance?
- 10. What are the basic principles for the preservation of food?

Section **B**

[Answer All. Each question carries 6 marks]

(Ceiling 24 marks)

11. Discuss the role of carbohydrates in the food industry

- 12. Explain the Maillard reaction and its significance in food processing and storage?
- 13. Describe the microbiological testing methods used to ensure food safety.
- 14. Explain the principles of TQM and Six Sigma in the food industry.
- 15. Discuss the role of different microorganisms in food fermentation.

Section C

[Answer any one. Each question carries 10 marks] (1x10=10 marks)

16. Discuss the role of food additives and contaminants in the food industry

17. Discuss the roles of vitamins, minerals, and emulsions in the food industry.

II Semester B.Sc. (CUFYUGP) Degree Examinations October 2024

BCH2FM206: Biochemistry of Lifestyle Disorders

Maximum Time: 1.5 hours

Maximum Marks: 50

Section A

[Answer All. Each question carries 2 marks] (Ceiling 16 marks)

- 1. Define lifestyle diseases.
- 2. What is the primary characteristic of atherosclerosis?
- 3. How is the inflammation linked to lifestyle disorders?
- 4. What is the primary function of leptin in the context of obesity?
- 5. What is apoptosis?
- 6. What is the primary cause of lifestyle disorders such as atherosclerosis and hypertension?.
- 7. Name one hormone involved in metabolic regulation and describe its role in maintaining blood glucose levels.
- 8. Define myocardial infarction?
- 9. Explain the significance of the enzyme lipoprotein lipase in lipid metabolism.
- 10. What is significance of cell cycle regulation in cancer development?

Section B

[Answer All. Each question carries 6 marks] (Ceiling 24 marks)

- 11. Discuss the biochemical mechanisms underlying the development of obesity and its association with lifestyle choices.
- 12. Explain the importance of diet and exercise in lifestyle disorders?
- 13. Discuss the inflammatory pathways involved in nephritis.
- 14. Discuss the relationship between dyslipidaemia and cardiovascular diseases.
- 15. Describe the role of oxidative stress in lifestyle disorders..

Section C

[Answer any one. Each question carries 10 marks] (1x10=10 marks)

- 16. Discuss the role of epigenetics and gene expression in the development and progression of lifestyle disorders.
- 17. Explain the concept of lifestyle medicine and its approach to preventing and treating chronic diseases.
