UNIVERSITY OF CALICUT

Abstract

General and Academic IV- Faculty of Science- Scheme and Syllabus of B.Sc.Mathematics Honours Programme -in tune with the CUFYUGP Regulations 2024, with effect from 2024 admission - Approved-Subject to ratification by the Academic Council- Implemented- Orders Issued

G & A - IV - J

U.O.No. 10025/2024/Admn Dated, Calicut University.P.O, 25.06.2024

Read:-1.U.O.No. 3103/2024/Admn dated 22.02.2024.
2.Revised minutes of the meeting of the Board of Studies in Mathematics (U G) held on 19.06.2024.
3.Remarks of the Dean, Faculty of Science dated 22.06.2024.
4. Orders of the Vice Chancellor in the file of even no dated 23.06.2024.

ORDER

1. The Regulations of Calicut University Four Year UG Programmes (CUFYUGP Regulations 2024) for Affiliated Colleges, has been implemented with effect from 2024 admission, vide paper read as (1) .
2. The Board of Studies in Mathematics (U G) in the meeting held on 19.06.2024 vide paper read as (2) , has approved the Scheme and Syllabus of B.Sc.Mathematics Honours Programme in tune with CUFYUGP Regulations 2024 ,with effect from 2024 admission .
3. The Dean, Faculty of Science vide paper read as (3) ,has approved the minutes of the meeting of the Board of Studies in Mathematics (U G) held on 19.06.2024.
4. Considering the urgency, the Vice Chancellor has approved the minutes of the meeting of the Board of Studies in Mathematics (U G) held on 19.06.2024 and accorded sanction to implement the Scheme and Syllabus of B.Sc.Mathematics Honours programme with effect from 2024 admission, subject to ratification by the Academic Council.
5. The Scheme and Syllabus of B.Sc.Mathematics Honours programme in tune with CUFYUGP Regulations 2024, is thus implemented with effect from 2024 admission,subject to ratification by the Academic Council. .
6. Orders are issued accordingly. (Syllabus appended)

SYLLABUS

PROGRAMME OUTCOMES (PO):

At the end of the graduate programme at Calicut University, a student would:

PO1	**Knowledge Acquisition:** **Demonstrate a profound understanding of knowledge trends and their impact on the chosen discipline of study.**
PO2	**Communication, Collaboration, Inclusiveness, and Leadership:** **Become a team player who drives positive change through effective communication, collaborative acumen, transformative leadership, and a dedication to inclusivity.**
PO3	**Professional Skills:** **Demonstrate professional skills to navigate diverse career paths with confidence and adaptability.**
PO4	**Digital Intelligence:** **Demonstrate proficiency in varied digital and technological tools to understand and interact with the digital world, thus effectively processing complex information.**
PO5	**Scientific Awareness and Critical Thinking:** **Emerge as an innovative problem-solver and impactful mediator, applying scientific understanding and critical thinking to address challenges and advance sustainable solutions.**
PO6	**Human Values, Professional Ethics, and Societal and Environmental Responsibility:** **Become a responsible leader, characterized by an unwavering commitment to human values, ethical conduct, and a fervent dedication to the well-being of society and the environment.**
PO7	**Research, Innovation, and Entrepreneurship:** **Emerge as a researcher and entrepreneurial leader, forging collaborative partnerships with industry, academia, and communities to contribute enduring solutions for local, regional, and global development.**

PROGRAMME SPECIFIC OUTCOMES (PSO):

At the end of the B.Sc. Mathematics Honours Programme at Calicut University, a student would:

Programme Specific Outcome (Major)	
PSO1	**Advanced Mathematical Knowledge: Understand core mathematical abstract concepts/theories and demonstrate a high level of mathematical rigor and logical reasoning**
PSO2	**Modelling and Problem-Solving Skills: Apply mathematical techniques to solve complex problem situations across various domains and interpret the result, demonstrating critical thinking and analytical skills.**
PSO3	**Computational Proficiency: Apply mathematical understanding to solve problems and explicitly work out step by step either by self or by software based computational tools.**
PSO4	**Research Aptitude: Analyse mathematical abstract ideas effectively and present/communicate mathematical arguments and solutions in a clear and coherent manner leading to research in Mathematics**
Programme Specific Outcome (Minor)	
PSO5	**Mathematics Proficiency: Demonstrate a strong understanding of mathematical principles and problem solving**
PSO6	**Interdisciplinary Integration: Integrate Mathematics with relevant disciplines to develop more holistic approaches to solve problems, leading to innovative solutions and advancements in various fields.**

MINIMUM CREDIT REQUIREMENTS OF THE DIFFERENT PATHWAYS

IN THE THREE-YEAR PROGRAMME IN CUFYUGP

Sl. No.	Academic Pathway	Major	Minor/ Other Disciplines	Foundation Courses AEC: 4 MDC: 3 SEC: 3 VAC: 3	Intern-ship	Total Credits	Example
		Each course has 4 credits		Each course has 3 credits			
1	Single Major (A)	68 (17 courses)	24 (6 courses)	39 (13 courses)	2	133	Major: Mathematics + six courses in different disciplines in different combinations
2	Major (A) with Multiple Disciplines (B, C)	68 (17 courses)	12 + 12 (3 + 3 = 6 courses)	39 (13 courses)	2	133	Major: Mathematics + Statistics and Computer Science
3	Major (A) with Minor (B)	68 (17 courses)	24 (6 courses)	39 (13 courses)	2	133	Major: Mathematics Minor: Physics
4	Major (A) with Vocational Minor (B)	68 (17 courses)	24 (6 courses)	39 (13 courses)	2	133	Major: Mathematics Vocational Minor: Data Analysis
5	Double Major	A: 48	-	12 + 9+9 +9	2	133	

	(A, B)	(12 courses) B: 44 (11 courses)	The 24 credits in the Minor stream are distributed between the two Majors. 2 MDC, 2 SEC, 2 VAC and the Internship should be in Major A. Total credits in Major A should be 48 + 20 = 68 (nearly 50% of 133) 1 MDC, 1 SEC and 1 VAC should be in Major B. Total credits in Major B should be 44 + 9 = 53 (40% of 133)		Mathematics and Physics double major
Exit with UG Degree / Proceed to Fourth Year with 133 Credits

(i). Students in Single Major pathway can choose course/courses from any of the Minor/ Vocational Minor groups offered by a discipline other than their Major discipline.

(ii). Students in the Mathematics with Multiple Disciplines pathway who wish to choose a minor from within the same department are limited to selecting either the sixth minor group (Mathematical Economics) or one of the vocational minor groups listed above as one of their multiple disciplines. For their second multiple discipline choice, students must select a Minor or Vocational Minor group offered by a discipline other than mathematics. If students opt for Mathematical Economics or another vocational group from mathematics, the title of that group will serve as their multiple discipline title.

(iii). Students in Major with Minor pathway can choose all the courses from any two Minor groups offered by a discipline other than their Major discipline. If the students from other major disciplines choose any two Minor groups in Mathematics as given above, then the title of the Minor will be Mathematics.

(iv). Students in Major with Vocational Minor pathway can choose all the courses from any two Vocational Minor groups offered by a discipline other than their Major discipline. If the students from other Major disciplines choose any two Vocational Minor groups in Mathematics as given above, then the title of the Vocational Minor will be Data Analytics.

EVALUATION SCHEME

1. The evaluation scheme for each course contains two parts: internal evaluation (about 30%) and external evaluation (about 70%). Each of the Major and Minor courses is of 4-credits. It is evaluated for 100 marks, out of which 30 marks are from internal evaluation and 70 marks, from external evaluation. Each of the General Foundation Course is of 3-credits. It is evaluated for 75 marks, out of which 25 marks are from internal evaluation and 50 marks, from external evaluation.

2. The 4-credit courses (Major and Minor courses) are of two types: (i) courses with only theory and (ii) courses with 3-credit theory and 1-credit Practical/Practicum.

In 4-credit courses with only theory component, out of the total 5 modules of the syllabus, one open-ended module with 20% content is designed by the faculty member teaching that course, and it is internally evaluated for 10 marks. The internal evaluation of the remaining 4 theory modules is for 20 marks.

In 4-credit courses with 3-credit theory and 1-credit Practical/Practicum components, out of the total 5 modules of the syllabus, 4 modules are for theory and the fifth module is for Practical/Practicum. The Practical/Practicum component is internally evaluated for 20 marks. The internal evaluation of the 4 theory modules is for 10 marks.

3. All the 3-credit courses (General Foundational Courses) in Mathematics are with only theory component. Out of the total 5 modules of the syllabus, one open-ended module with 20% content is designed by the faculty member teaching that course, and it is internally evaluated for 5 marks. The internal evaluation of the remaining 4 theory modules is for 20 marks.

Sl. No.	Nature of the Course		Internal Evaluation in Marks (About 30% of the Total)		External Exam on 4 Modules (Marks)	Total Marks
			Open-ended Module / Practical/Practicum	On the other 4 Modules		
1	4-credit course	only theory (5 modules)	10	20	70	100
2	4-credit course	Theory (4 modules) + Practical/Practicum	20	10	70	100
3	3-credit course	only theory (5 modules)	5	20	50	75

* Refer the table in section 1.2 for the evaluation of Practical/Practicum component

1.2. EVALUATION OF PRACTICAL/PRACTICUM COMPONENT

The evaluation of Practical/Practicum component in Major and Minor courses is completely by internal evaluation.

- Continuous evaluation of Practical/Practicum by the teacher-in-charge shall carry a weightage of 50%.
- The end-semester Practical/Practicum examination and viva-voce, and the evaluation of Practical/Practicum records shall be conducted by the teacher in-charge and an internal examiner appointed by the Department Council.
- The process of continuous evaluation of Practical/Practicum courses shall be completed before 10 days from the commencement of the end-semester examination.
- Those who passed in continuous evaluation alone will be permitted to appear for the end-semester examination and viva-voce.

The scheme of continuous evaluation and the end-semester examination and viva-voce of Practical/Practicum component shall be as given below:

Sl. No.	Evaluation of Practical/Practicum Component of Credit-1 in a Major / Minor Course	Marks for Practical/Practicum	Weightage
1	Continuous evaluation of Practical/Practicum/ exercise performed in Practical/Practicum classes by the students	10	50%
2	End-semester examination and viva-voce to be conducted by teacher-in-charge along with an additional examiner arranged internally by the Department Council	7	35%
3	Evaluation of the Practical/Practicum records submitted for the end semester viva–voce examination by the teacher-in-charge and additional examiner	3	15%
	Total Marks	20	

1.3. EXTERNAL EVALUATION OF THEORY COMPONENT

External evaluation carries 70% marks. Examinations will be conducted at the end of each semester. Individual questions are evaluated in marks and the total marks are converted into grades by the University based on 10-point grading system (refer section 5).

2. INTERNSHIP

- All students should undergo Internship of 2-credits during the first six semesters in Research Institutions, Universities, Firms, Industry or Organizations, or training in labs with faculty and researchers of their own institution or other Higher Educational Institutions (HEIs) or research institutions.
- Internship can be for enhancing the employability of the student or for developing the research aptitude.
- Internship can involve hands-on training on a particular skill/ equipment/ software. It can be a short project on a specific problem or area. Attending seminars or workshops related to an area of learning or skill can be a component of Internship.

A faculty member/ scientist/ instructor of the respective institution, where the student does the Internship, should be the supervisor of the Internship

2.1. GUIDELINES FOR INTERNSHIP

1. Internship can be in Mathematics or allied disciplines.
2. There should be minimum 60 hrs. of engagement from the student in the Internship.
3. Summer vacations and other holidays can be used for completing the Internship.
4. In B.Sc. Mathematics Honours programme, institute/ industry visit or study tour is a requirement for the completion of Internship. Visit to minimum one national research institute, research laboratory and place of scientific importance should be part of the study tour. A brief report of the study tour has to be submitted with photos and analysis.
5. The students should make regular and detailed entries in to a personal log book through the period of Internship. The log book will be a record of the progress of the Internship and the time spent on the work, and it will be useful in writing the final report. It may contain mathematical results, ideas, expressions, experimental conditions, rough work and calculation, computer file names etc. All entries should be dated. The Internship supervisor should periodically examine and countersign the log book.
6. The log book and the typed report must be submitted at the end of the Internship.
7. The institution at which the Internship will be carried out should be prior-approved by the Department Council of the college where the student has enrolled for the UG Honours programme.

2.2. VALUATION OF INTERNSHIP

- The evaluation of Internship shall be done internally through continuous assessment mode by a committee internally constituted by the Department Council of the college where the student has enrolled for the UG Honours programme.
- The credits and marks for the Internship will be awarded only at the end of semester 6.
- The scheme of continuous evaluation and the end-semester viva-voce examination based on the submitted report shall be as given below:

Sl. No.	Components of Evaluation of Internship		Marks for Internship 2 Credits	Weightage
1	Continuous evaluation of internship through interim presentations and reports by the committee internally constituted by the Department Council	Acquisition of skill set	10	40%
2		Interim Presentation and Viva-voce	5	
3		Punctuality and Log Book	5	
4	Report of Institute Visit/ Study Tour		5	10%
5	End-semester viva-voce examination to be conducted by the committee internally constituted by the Department Council	Quality of the work	6	35%
6		Presentation of the work	5	
7		Viva-voce	6	
8	Evaluation of the day-to-day records, the report of internship supervisor, and final report submitted for the end semester viva–voce examination before the committee internally constituted by the Department Council		8	15%
	Total Marks		50	

3. PROJECT

3.1. PROJECT IN HONOURS PROGRAMME

- In Honours programme, the student has the option to do a Project of 12-credits instead of three Core Courses in Major in semester 8.
- The Project can be done in the same institution/ any other higher educational institution (HEI)/ research centre/ training centre.
- The Project in Honours programme can be a short research work or an extended internship or a skill-based training programme.
- A faculty member of the respective institution, where the student does the Project, should be the supervisor of the Project.

3.2. PROJECT IN HONOURS WITH RESEARCH PROGRAMME

- Students who secure 75% marks and above (equivalently, CGPA 7.5 and above) cumulatively in the first six semesters are eligible to get selected to Honours with Research stream in the fourth year.
- A relaxation of 5% in marks (equivalently, a relaxation of 0.5 grade in CGPA) is allowed for those belonging to SC/ ST/ OBC (non-creamy layer)/ Differently-Abled/ Economically Weaker Section (EWS)/ other categories of candidates as per the decision of the UGC from time to time.
- In Honours with Research programme, the student has to do a mandatory Research Project of 12-credits instead of three Core Courses in Major in semester 8.
- The approved research centres of University of Calicut or any other university/ HEI can offer the Honours with Research programme. The departments in the affiliated colleges under University of Calicut, which are not the approved research centres of the University, should get prior approval from the University to offer the Honours with Research programme. Such departments should have minimum two faculty members with Ph.D., and they should also have the necessary infrastructure to offer Honours with Research programme.

- A faculty member of the University/ College with a Ph.D. degree can supervise the research project of the students who have enrolled for Honours with Research. One such faculty member can supervise maximum five students in Honours with Research stream.

The maximum intake of the department for Honours with Research programme is fixed by the department based on the number of faculty members eligible for project supervision, and other academic, research, and infrastructural facilities available.

- If a greater number of eligible students are opting for the Honours with Research programme than the number of available seats, then the allotment shall be based on the existing rules of reservations and merits.

3.3. GUIDELINES FOR THE PROJECT IN HONOURS PROGRAMME

AND HONOURS WITH RESEARCH PROGRAMME

1. Project can be in Mathematics or allied disciplines.
2. Project should be done individually.
3. Project work can be of theoretical/ experimental /computational in nature.

4. There should be minimum 360 hrs. of engagement from the student in the Project work in Honours programme as well as in Honours with Research programme.
5. There should be minimum 13 hrs./week of engagement (the hours corresponding to the three core courses in Major in semester 8) from the teacher in the guidance of the Project(s) in Honours programme and Honours with Research programme.
6. The various steps in project works are the following:
   - Wide review of a topic.
   - Investigation on a problem in a systematic way using appropriate techniques.
   - Systematic recording of the work.
   - Reporting the results with interpretation in a standard documented form.

Presenting the results before the examiners.

7. During the Project the students should make regular and detailed entries in to a personal log book through the period of investigation. The log book will be a record of the progress of the Project and the time spent on the work, and it will be useful in writing the final report. It may contain mathematical models and results, ideas, mathematical expressions, rough work and calculation, computer file names etc. All entries should be dated. The Project supervisor should periodically examine and countersign the log book.

8. The log book and the typed report must be submitted at the end of the Project. A copy of the report should be kept for reference at the department. A soft copy of the report too should be submitted, to be sent to the external examiner in advance.
9. It is desirable, but not mandatory, to publish the results of the Project in a peer reviewed journal.
10. The project report shall have an undertaking from the student and a certificate from the research supervisor for originality of the work, stating that there is no plagiarism, and that the work has not been submitted for the award of any other degree/ diploma in the same institution or any other institution.
11. The project proposal, institution at which the project is being carried out, and the project supervisor should be prior-approved by the Department Council of the college where the student has enrolled for the UG Honours programme.

3.4. EVALUATION OF PROJECT

- The evaluation of Project will be conducted at the end of the eighth semester by both internal and external modes.
- The Project in Honours programme as well as that in Honours with Research programme will be evaluated for 300 marks. Out of this, 90 marks are from internal evaluation and 210 marks, from external evaluation.
- The internal evaluation of the Project work shall be done through continuous assessment mode by a committee internally constituted by the Department Council of the college where the student has enrolled for the UG Honours programme. 30% of the weightage shall be given through this mode.
- The remaining 70% shall be awarded by the external examiner appointed by the University.
- The scheme of continuous evaluation and the end-semester viva-voce of the Project shall be as given below:

Sl. No	Components of Evaluation of Project	Marks for the Project (Honours/ Honours with Research)	Weightage
1	Continuous evaluation of project work through interim presentations and reports by the committee internally constituted by the Department Council	90	30%
2	End-semester viva-voce examination to be conducted by the external examiner appointed by the university	150	50%
3	Evaluation of the day-to-day records and project report submitted for the end-semester viva–voce examination conducted by the external examiner	60	20%
	Total Marks	300	

INTERNAL EVALUATION OF PROJECT

Sl. No	Components of Evaluation of Project	Marks for the Project (Honours/ Honours with Research)
1	Skill in doing project work	30
2	Interim Presentation and Viva-Voce	20
3	Punctuality and Log book	20
4	Scheme/ Organization of Project Report	20
Total Marks		90

EXTERNAL EVALUATION OF PROJECT

Sl. No	Components of Evaluation of Project	Marks for the Project (Honours/ Honours with Research) 12 credits
1	Content and relevance of the Project, Methodology, Quality of analysis, and Innovations of Research	50
2	Presentation of the Project	50
3	Project Report (typed copy), Log Book and References	60
4	Viva-Voce	50
Total Marks		210

4. GENERAL FOUNDATION COURSES

4.2. EXTERNAL EVALUATION

External evaluation carries about 70% marks. Examinations will be conducted at the end of each semester. Individual questions are evaluated in marks and the total marks are converted into grades by the University based on 10-point grading system (refer section 5)

PATTERN OF QUESTION PAPER FOR GENERAL FOUNDATION COURSES

Duration	Type	Total No. of Questions	No. of Questions to be Answered	Marks for Each Question	Ceiling of Marks

5. LETTER GRADES AND GRADE POINTS

- Mark system is followed for evaluating each question.
- For each course in the semester letter grade and grade point are introduced in 10-point indirect grading system as per guidelines given below.
- The Semester Grade Point Average (SGPA) is computed from the grades as a measure of the student's performance in a given semester.
- The Cumulative GPA (CGPA) is based on the grades in all courses taken after joining the programme of study.
- Only the weighted grade point based on marks obtained shall be displayed on the grade card issued to the students.

LETTER GRADES AND GRADE POINTS

Sl. No.	Percentage of Marks (Internal & External Put Together)	Description	Letter Grade	Grade Point	Range of Grade Points	Class
1	95% and above	Outstanding	O	10	9.50 – 10	First Class with Distinction
2	Above 85% and below 95%	Excellent	A+	9	8.50 – 9. 49	
3	75% to below 85%	Very Good	A	8	7.50 – 8.49	
4	65% to below 75%	Good	B+	7	6.50 – 7.49	First Class
5	55% to below 65%	Above Average	B	6	5.50 – 6.49	
6	45% to below 55%	Average	C	5	4.50 – 5.49	Second Class
7	35% to below 45% aggregate (internal and external put together) with a minimum of 30% in external valuation	Pass	P	4	3.50 – 4.49	Third Class
8	Below an aggregate of 35% or below 30% in external evaluation	Fail	F	0	0 – 3.49	Fail
9	Not attending the examination	Absent	Ab	0	0	Fail

- When students take audit courses, they will be given Pass (P) or Fail (F) grade without any credits.
- The successful completion of all the courses and capstone components prescribed for the three-year or four-year programme with 'P' grade shall be the minimum requirement for the award of UG Degree or UG Degree Honours or UG Degree Honours with Research, as the case may be.

5.1. COMPUTATION OF SGPA AND CGPA

- The following method shall be used to compute the Semester Grade Point Average (SGPA):

  The SGPA equals the product of the number of credits (Ci) with the grade points (Gi) scored by a student in each course in a semester, summed over all the courses taken by a student in the semester, and then divided by the total number of credits of all the courses taken by the student in the semester,

  $$\text{i.e. SGPA (Si)} = \Sigma i\,(Ci \times Gi) \,/\, \Sigma i\,(Ci)$$

  where Ci is the number of credits of the i^{th} course and Gi is the grade point scored by the student in the i^{th} course in the given semester. Credit Point of a course is the value obtained by multiplying the credit (Ci) of the course by the grade point (Gi) of the course.

ILLUSTRATION – COMPUTATION OF SGPA

Semester	Course	Credit	Letter Grade	Grade point	Credit Point (Credit x Grade)
I	Course 1	3	A	8	3 x 8 = 24
I	Course 2	4	B+	7	4 x 7 = 28
I	Course 3	3	B	6	3 x 6 = 18
I	Course 4	3	O	10	3 x 10 = 30
I	Course 5	3	C	5	3 x 5 = 15
I	Course 6	4	B	6	4 x 6 = 24
	Total	20			139
	SGPA				139/20 = 6.950

The Cumulative Grade Point Average (CGPA) of the student shall be calculated at the end of a programme. The CGPA of a student determines the overall academic level of the student in a programme and is the criterion for ranking the students.

CGPA for the three-year programme in CUFYUGP shall be calculated by the following formula.

CGPA for the four-year programme in CUFYUGP shall be calculated by the following formula.

- The SGPA and CGPA shall be rounded off to three decimal points and reported in the transcripts.
- Based on the above letter grades, grade points, SGPA and CGPA, the University shall issue the transcript for each semester and a consolidated transcript indicating the performance in all semesters.

Pre-requisites	1.Familiarity with system of equations and their solutions 2. Knowledge about matrices and matrix operations.				
Course Summary	This course is a quick review of linear algebra, intended for students who have already taken a previous course in linear algebra or have some experience with vectors and matrices. It begins with the concepts of vector spaces, subspaces, bases and dimension. Linear transformations are introduced as 'natural maps' between vector spaces. The course opens up the classical finite dimensional inner product theory for the canonical reduction of a matrix as a special case of a self-adjoint operator.

Pre-requisites	1) Basic knowledge to start a desktop/laptop computer 2) A basic course in calculus with an understanding of differential and integral calculus (higher secondary level and one or two semester courses from Bsc) 3) A basic course in linear algebra ((higher secondary level))				
Course Summary	In the first part of the course, it intends to give a quick introduction to writing python programs using various popular interfaces. How to handle data and save and read them files is introduced next along with the concepts of repeating the tasks using conditionals and loops. The problems connected with matrices and arrays is solved using the python module numpy. The python module SymPy is used to do various mathematical problems related with symbolic computations. A brief introduction of python module pandas is given, which is used to do data analysis. Using the Python programming structure, an introduction to the advance mathematics software sagemath is given in the second part of the course. Various practical problems making use of concepts from the calculus and linear algebra are to be solved using the sagemath software so that the students will come to know some of the applications of mathematics in real life.

Course Summary	Continuous real functions are introduced rigorously using the epsilon-delta argument. The equivalent sequential criterion is established later. Differentiable and (Riemann) Integrable functions are introduced followed by the fundamental theorem of calculus connecting the two notions. The course concludes with a discourse on series of functions and various results discussing the compatibility of the above three notions with the limiting operations on series of functions.

Textbook	Introduction to Real Analysis, 4/e, Robert G Bartle, Donald R Sherbert John Wiley & Sons(2011)			
Module	**Unit**	**Content**	**Hrs (45+30)**	**Marks Ext:70**
I		**Continuous Functions**	**14**	**Min.15**
	1	Section 5.1 – Continuous functions		
	2	Section 5.3 – Continuous functions on intervals — 5.3.1 to 5.3.5		
	3	Section 5.3 – from 5.3.7 - 5.3.10		
	4	Section 5.4 – Uniform Continuity-up to 5.4.3		
	5	Section 5.4 – Uniform Continuity-5.4.4 to 5.4.14(proof of Weierstrass Approximation Theorem is optional)		
	6	Selected problems from the above sections.		
II		**Differentiation**	**10**	**Min.15**
	7	Section 6.1 – The Derivative – 6.1.1 to 6.1.7		
	8	Section 6.2- The Mean Value Theorem - 6.2.1 to 6.2.6		
	9	Section 6.2 - from 6.2.7 to 6.2.9		
	10	Section 6.2-The Mean Value Theorem- 6.2.10 to 6.2.13		
	11	Selected problems in the above sections.		
III		**The Riemann Integral**	**14**	**Min.20**
	12	Section 7.1 – Riemann Integral – up to 7.1.4 (a)		
	13	Section 7.1 – from 7.1.5 to 7.1.7 (proof of 7.1.7 is optional)		
	14	Section 7.2 – Riemann Integrable functions – 7.2.1 to 7.2.5 (Examples 7.2.2 are optional)		
	15	Section 7.2 – from 7.2.7 to 7.2.13		
	16	Section 7.3 – The Fundamental Theorem – 7.3.1 to 7.3.7		
	17	Section 7.3 – from 7.3.8 to 7.3.18 (proof of theorem 7.3.18 is optional)		
	18	Selected problems in the above sections.		
IV		**Sequences and Series of functions**	**7**	**Min.10**
	19	Section 8.1 – Pointwise and Uniform Convergence – 8.1.1 to 8.1.3		
	20	Section 8.1 – from 8.1.4 to 8.1.10		
	21	Section 8.2 – Interchange of limits – 8.2.1		
	22	Section 8.2 – Interchange of limits- 8.2.3		
V		**Practicum:** The goal is for the students to learn the following selected topics in 15 practicum sessions of two hours each via self-study and group activities. The lecturer may assist by running group discussions, overseeing class seminars and referring library books for self-study and note preparation.	**30**	
	1	Section 5.2 – Combinations of continuous functions		

	2	Section 5.6 – from 5.6.5 to 5.6.7		
	3	Section 6.1 – Inverse Functions – 6.1.8 to 6.1.10		
	4	Section 6.3 – from 6.3.5 to 6.3.7		
	5	Section 6.4 – Taylor's theorem – 6.4.1 to 6.4.4		
	6	Section 6.4 – from 6.4.5 to 6.4.8		
	7	Section 9.1 – Absolute Convergence – 9.1.1 to 9.1.3		
	8	Section 9.1 – 9.1.4 to 9.1.5		
	9	Section 9.2 – Limit Comparison Test with examples		
	10	Section 9.2 – Root Test with examples		
	11	Section 9.2 – Ratio Test with examples		
	12	Section 9.2 – Integral Test with examples		
	13	Section 9.2 – Raabe's Test with examples		
	14	Section 9.3 – Alternating Series Test		
	15	Section 9.4 – Infinite Series – Series of Functions – 9.4.1 to 9.4.7

Pre-requisites	Basic set theory, algebra of Integers, operations on functions, basic proof techniques etc.
Course Summary	This course explores the algebraic concepts of Binary Operations, Binary Structures, Groups, Rings, Integral Domains and Fields. We further study the Theory of Groups. Elementary properties, Subgroups, Finite Groups, Cyclic Groups, Groups of Permutations, Orbits, Cycles, Alternating Groups, Cosets and the Theorem of Lagrange are studied. Then we study mappings between groups or Homomorphisms. Finally, the Open-ended section points to Generating sets, Factor Groups and Field of Quotients of an Integral Domain.

Suggested Programming Exercises for Open-Ended

1. Form congruence groups, their Cayley tables (Section 9.2, Ref (3)).
2. Form symmetric groups of various orders, list the elements, find the power of some elements, find out the product of some of the elements. Find the order of the elements. Form a group table using conditionals and loops. (Section 9.3, Ref (3) or Ref (1)).
3. List S_3. Find a subgroup from this group. How many distinct subgroups can be found from this group? List all of them.
4. Form the Dihedral group D_4, check if it is abelian using is_abelian(). Conduct the same experiments as listing the elements ,finding the orders etc as above. (Section 9.4, Ref (3) or Ref (1)).
5. Test the command is normal () on a few subgroups of S_3. (Ref (1)).
6. Create cyclic groups. (Section 9.5, Ref (3)).

7. Form finitely generated abelian groups. (Section 9.6, Ref (3)).

8. Form a subgroup of a group (say, S_3) (Section 9.8, Ref (3)).

Course Details	Credit / Lecture/Tutorial per week / Practicum per week / Total Hours: 4 / 4 / - / 60
Pre-requisites	Arithmetic of integers, basic set theory and proof techniques.
Course Summary	We start number theory with the division algorithm, g.c.d., and the Euclidean algorithm for computing it, essential for solving Diophantine equations like ax + by = c. We then prove the Fundamental Theorem of Arithmetic, discuss the infinitude of primes and the sieve of Eratosthenes. Following that, we cover Linear Congruences, the Chinese Remainder theorem, and Fermat's Little Theorem. Finally, we explore Wilson's Theorem, Euler's Phi Function, and Euler's Theorem.

Pre-requisites	1. Mathematical Logic and necessary exposure to set theory. 2. Basic Calculus 3. Real Analysis I, Real Analysis II				
Course Summary	The topology of the real line is explored in detail, as is necessary later for an in-depth understanding of the theory of real functions. Limits, Continuity & Differentiation are rigorously covered. Riemann-Stieltjes Integration is introduced as a generalisation of the Riemann integration covered in earlier semesters, enabling the student to view summation of series and integration as extensions of the same concept. After a discourse on series of functions and various results discussing the compatibility of the above three notions with the limiting operations on series of functions, the course concludes with a presentation of the famous Stone-Weierstrass' Theorem.

Course Summary	The subject of general topology is introduced with motivations from the theory of real functions and of metric spaces. Basic concepts like open and closed sets, interiors, closures, boundaries, neighbourhoods, bases and sub-bases are introduced. After a discussion of continuity and related topics, the universal properties of strong and weak topologies are discussed. Compactness, connectedness, and various countability axioms are studied in some detail. After a detailed study of the hierarchy of separation axioms and their interplay with other properties such as compactness, the course concludes with a presentation of the famous Urysohn & Tietze characterisations of normality.

Pre-requisites	1. Mathematical Logic and necessary exposure to set theory. 2. First Course on Group Theory				
Course Summary	The subject of group theory is taken upon from where it was left off in previous introductory courses. The basic constructions in group theory – those of direct products and quotient groups are introduced. The Fundamental Theorem of Finitely Generated Abelian Groups is introduced (without proof) and the consequences explored in order to compare the challenges in the theory of Abelian vs non-Abelian groups. After an introductory delving into normal and subnormal series of groups, group actions are introduced and Sylow Theory discussed in the context of classifying non-Abelian groups. The course concludes with a basic discussion on polynomial rings and their factorisation, paving the way for the theory of extension fields in later, more advanced courses.

Suggested Programming Exercises for Practicum:

1. Form congruence groups Z_3, Z_2. Verify that $Z_3 \times Z_2 \cong \mathbb{Z}_6$. Form its

cosets (Section 9.11, Ref (3)).
2. Find the centre of the dihedral group. (Section 9.12, Ref (3))
3. For an element from the dihedral group, find its stabilizer. (Section 9.12, Ref (3))
4. Find the conjugacy classes of an element from the dihedral group. (Section 9.12, Ref (3))
5. Take a subgroup (say H) of S_3. List the conjugacy classes using the command conjugacy classes subgroups (). Can you find out all the subgroups using these conjugacy classes? (Ref (1) or Section 9.12, Ref (3))
6. Find Sylow-2-subgroups and Sylow-3-subgroups or D_{18} (Section 9.13, Ref (3))

Pre-requisites	1. Mathematical Logic and necessary exposure to set theory. 2. Matrices and Determinants 3. Systems of Linear Equations and their solutions			
Course Summary	Vector spaces in the abstract are introduced. Linear transformations are introduced as structure preserving maps between them. Representation of linear transformations as matrices is discussed. The algebraic dual and double dual space of a vector space are studied in some detail. The concept of the transpose of a linear transformation is introduced and discussed as well. The course then passes on to spectral theory on finite dimensional spaces, introducing characteristic values and vectors. After an extended discussion leading up to the characterisation of diagonalisable and triangulable operators, an elementary decomposition of a linear operator is established. The course ends with a short discussion of inner products and inner product spaces.

Course Summary	The "Discrete Mathematics" course (MAT7CJ405) covers essential concepts in discrete structures and their applications. Students explore topics like graph theory, automorphisms, connectivity, and order relations through carefully structured modules. The course includes practical exercises and references to foundational works in the field, providing students with theoretical understanding and problem-solving skills necessary for further studies or real-world applications in mathematics and related areas.

Course Summary	This is a more advanced course than MAT6CJ305 / MAT8MN305 Elementary Number Theory. Here we focus on arithmetical functions, their averages, distribution of prime numbers, quadratic reciprocity and in the last open-ended section, Cryptography. Arithmetical functions are geared towards the study of prime numbers and their distribution. We provide a rigorous examination of several of them such as Mobius function, Euler's totient function, and compositions through techniques such as Dirichlet multiplication and convolution. Next we study their asymptotic behaviour using techniques such elementary estimates, partial summation and Dirichlet products. Next, we study the distribution of prime numbers. The prime number theorem is stated along with some equivalent versions and a build-up to it. Next the concept of quadratic residues, quadratic reciprocity and how to compute the same, along with applications, are studied. The open-ended part is Cryptography.

Course Outcomes (CO):

Course Summary	The focus of this paper is mathematics underlying patterns which in converse can be used to produce patterns automatically by computer, allocating some design decisions to the user. We begin with isometries, those transformations of the plane which preserve distance and hence shape. These fall into two classes: the direct ones are rotations or translation, and the indirect ones reflections or glides. We derive the rules for combining isometries, and introduce groups, and the dihedral group in particular. We also apply this to classifying all 1-dimensional or 'braid' patterns into seven types. Our next focus is on symmetries; that is, those isometries which send a pattern onto itself, each part going to another with the same size and shape. A plane pattern is one having translation symmetries in two non-parallel directions. These are made up of parallelogram shaped cells, falling into five types. Finally, we deduce the existence of 17 pattern types, each with its own set of interacting symmetry operations.

Course Summary	Linear Programming is a mathematical modelling technique in which a linear function is maximized or minimized when subjected to various constraints. This technique has been useful for guiding quantitative decisions in business planning, in industrial engineering, and—to a lesser extent—in the social and physical sciences. This course begins with convex sets and extrema of functions for a sound basis of the subject. It then develops into LP problems including Transportation and Assignment problems.

	21	2.2.4 – Plancherel Theorem		
	22	More problems from the above sections		
V (Open Ended)	**Fourier Analysis**		**12**	
	After having the above basics of Fourier Analysis, one can look at the discrete versions of Fourier Analysis and can enter into Wavelets theory (for instance refer sections 4.1 and 4.2 of text book). The Haar wavelet analysis with its decomposition and reconstruction theorems open the window to signal theory which is an active area of research for both pure and applied Mathematicians

Pre-requisites	1. Topology I			
Course Summary	The advanced topology course extends Topology I by introducing further concepts and tools. It starts with the product topology and explores its properties. Embeddings, including the Tychonoff embedding theorem, are discussed. Urysohn's Lemma from the previous course is used to prove the Urysohn Metrisation Theorem. Nets and filters are introduced to address sequence limitations. Various forms of compactness and compactifications are examined, with a focus on their relation to completeness in metric spaces. The course concludes with important results such as the Baire category theorems.

Course Summary	Cryptography is a fundamental aspect of information security that involves creating secure communication by encoding messages to make them unintelligible to unauthorised users and Cryptography relies heavily on mathematical concepts. This course covers a wide range of topics, starting with Classical Cryptography, which includes simple cryptosystems. It also delves into cryptanalysis of these systems. Moreover, the course includes a section on Cryptographic Hash Functions, focusing on their role in ensuring data integrity. Students gain a comprehensive understanding of these concepts and techniques, equipping them with the knowledge and skills needed to analyze and implement secure cryptographic systems.

Academic Level	400 – 499			
Course Details	Credit	Lecture/Tutorial per week	Practicum per week	Total Hours
	4	4	-	60
Pre-requisites	1. Mathematical Logic and necessary exposure to set theory. 2. Research Aptitude			
Course Summary	MAT8CJ489, "Research Methodology in Mathematics," is designed to equip students with the essential skills and knowledge required for conducting research in mathematics effectively. This course focuses on various aspects of mathematical research, including axiomatic set theory, writing mathematics, researching and presenting findings, and using LaTeX for mathematical typesetting. Additionally, students explore open-ended research topics, allowing them to delve into specific areas of interest within mathematics. Throughout the course, students engage with key texts and resources, enabling them to develop a comprehensive understanding of research methodologies in mathematics.			

Course Outcomes (CO):

CO	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	Set Theory and Mathematical Writing: Students will demonstrate proficiency in axiomatic set theory, including concepts such as relations, functions, and Peano axioms. Students will exhibit competence in mathematical writing.			Internal Examination/ Assignment/ End Sem examination
CO2	Research Skills and Presentation Techniques: Students will acquire research skills, including identifying research topics. Students will develop effective presentation techniques, giving talks.			Internal examination/ Seminar/ Assignment/ End Sem examination
CO3	Mathematical typesetting: to use LaTeX to create and typeset documents. Beamer Presentations and PSTricks also included.			Internal Examination/Seminar/ Assignment/End Sem examination

Course Summary	The course "Matrices and Basics of Probability Theory" provides students with a comprehensive understanding of two fundamental mathematical concepts: matrices and probability. The syllabus begins with a focus on the algebra of matrices, covering operations such as addition, subtraction, multiplication, determinants, and inverses, followed by applications in solving systems of equations. Transitioning to probability theory, students delve into basic concepts, conditional probability, the addition and multiplication rules, and various counting methods. Additionally, the course introduces basic statistics, including frequency distributions, measures of central tendency and variation, and measures of position.

Course Summary	The course "Graph Theory and Linear Programming" introduces fundamental concepts in graph theory focusing initially on graph definitions, properties, and structures such as vertex degrees, subgraphs, paths, and cycles. The discussion extends to trees, bridges, spanning trees, cut vertices, and connectivity, emphasizing essential properties and theorems while providing proofs for brevity. Transitioning to linear programming, the course employs graphical methods for solving linear inequalities and optimization problems, progressing to the simplex method for more complex maximization and minimization problems, including duality and nonstandard scenarios. Additionally, the syllabus offers open-ended exploration into graph modellingmixture, matrix representations, and connector problems.

Semester	VI
Academic Level	300 - 399

Course Details	Credit	Lecture per week	Tutorial per week	Practical per week	Total Hours
	3	3	-	0	60

Pre-requisites	A basic course in Python programming with the understanding of using looping, conditionals, creating variables, writing functions, and importing modules.
Course Summary	This course is an advanced course for those who have learned the basics of Python. It will enable the students to learn more features of Python with a specific focus on how to use them to analyse data and arrive at conclusions in practical situations with the help of a reasonable knowledge of statistics.

Course Outcomes (CO):

CO	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	Learn to rearrange and manipulate various data structures in Python to make it more meaningful	U	F	Internal Exam/ Assignments / End Semester Examination
CO2	Understand fundamentals of Statistics from a real life point of view	U	F	Internal Exam/ Assignments / Quiz / End Semester Examination
CO3	Learn how to visualise data for clearer understanding of practical situations	Ap	C	Internal Exam / Quiz / End Semester Examination

* - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)# - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)

Detailed Syllabus:

Note : Python IDLE (with necessary modules like pandas, scipy), Anaconda/Spyder package, Jupyter notebook interface or Google colab (free to use) interface, Pydroid 3 for android (along with Pydroid repository plugin) can be used for training purposes. Python version 3.10 or above should be used to avoid errors with some of the functionalities we discuss in the course.

Note: For detailed understanding of the topics given in Module II, additional reference 1 can also be used, though it is not very essential.

Roadmap:

Being a practice-oriented course, the teachers may introduce the students to more problems so as to familiarize them with the tools in which they have been trained through this course. Many good examples on how to use these in real life situations can be found in Chapter 13 of additional reference 2 and the URLs provided in the additional references section.

Course Title	**STATISTICS AND MATHEMATICS WITH R**				
Type of Course	**VAC**				
Semester	IV				
Academic Level	200-299				
Course Details	Credit	Lecture/Tutorial per week	Practicum per week	Total Hours	
	3	3	-	45	
Pre-requisites	1. Basic School (+2) Level Statistics 2. Basic Programming Experience				
Course Summary	The "Statistics and Mathematics with R" course is designed to provide an understanding of R programming for statistical analysis and mathematical computation. The curriculum begins with an introduction to R, covering basic features, data storage, and manipulation techniques. Subsequent modules explore graphical visualization, programming constructs such as flow control and functions, and computational linear algebra. Each unit offers hands-on exercises and references to relevant sections in the textbook by Braun and Murdoch, supplemented by further reading materials for deeper exploration. This course helps students with practical skills in utilizing R for statistical analysis and mathematical modeling.				

Course Outcomes (CO):

Module	**Unit**	**Content**	**Hours (36 + 9)**	**Ext. Marks (50)**
I		**Measurement of sides and areas of triangles, quadrilaterals and circles.**	**9**	**14**
	1	Computation of sides of a right triangle when one side is given.		
	2	Computation of area of triangles and quadrilaterals.		
	3	Computation of the perpendicular below the intersection of diagonals.		
	4	Approximating the surface area and volume of spheres.		
	5	Computation of sides of polygons inscribed in a circle.		
	6	Computation of the arcs and chords of circles.		
		Chapter 28 from Text I (Treatment based on English translations of Sanskrit verses in Lilavati).		
II		**Rules concerned with Solids, Shadow of Gnomon and Pulverizer.**	**9**	**12**
	7	Volume of Solids		
	8	Volume of a heap of Grain		
	9	Shadows of Gnomon.		
	10	Pulverization		
		Chapters 29, 30, 31, 32 and 33 from Text I (Treatment based on English translations of Sanskrit verses in Lilavati).		
III		**Circle and Circumference as in Yuktibhasa.**	**10**	**14**
	11	Circumference of a circle approximated by regular polygons.		
	12	Circumference of a circle without calculating square roots.		
	13	Circumference of a circle in terms of the hypotenuses.		
	14	Summation of Series.		
	15	Calculation of circumference.		
	16	Conversion of the Rsine to Arc.		
		Sections 6.1 to 6.6 of Chapter 6 from Text II.		
IV		**Sine and Cosine series as in Yuktibhasa.**	**8**	**10**
	17	Some technical terms and derivation of Rsines.		
	18	Computation of Rsines.		
	19	Computation of Jya and Sara by sankalita and accurate circumference.		
		Sections 7.1 to 7.6 of Chapter 7 from Text II.		
V (Open Ended)		**From Ancient Mathematical Rules to Modern Computer Algorithms.**	**9**	
	20	Decoding of important Sanskrit verses discussed in Modules I and II from Lilavati (Text I).		

	21	Decoding of important Sanskrit verses discussed in Modules III and IV from Yuktibhasa (Text II).		
	22	Conversion of selected Rules discussed in Modules I to IV into Computer Algorithms.

1		**Data Types and Data Structures**	10	Min.15
	1	Introduction to Python: - using the Python interpreter, Overview of programming in Python		
	2	Expressions and Variables-String Operations.		
	3	Python Data Structures: lists & Tuple –Sets - Dictionaries		
	4	Programming Fundamentals: Conditions and Branching- Loops		
	5	Functions: formal arguments, variable-length arguments		
II		**Classes, files and modules**	12	Min.15
	6	Introduction to Classes and Objects: -classes, class attributes, instances, instance attributes		
	7	Binding and method invocation, inheritance, polymorphism,		
	8	Built-in functions for classes and instances.		
	9	Files and input/output, reading and writing files		
	10	Methods of file objects, using standard library functions		
	11	Exception Handling		
III		**Introduction to Data Science using Python**	12	Min.15
	12	Python libraries: Numpy- Scikit- Pandas.		
	13	Importing Datasets: Importing and Exporting Data in Python, Basic Insights from Datasets		
	14	Data cleansing and pre-processing: Identify and Handle Missing Values		
	15	Descriptive Statistics		
	16	ANOVA Correlation		

	17	Dealing with Outliers		
IV		**Data Visualization Packages - Matplotlib and Seaborn**	**11**	**Min.15**
	18	Overview of data visualization concepts		
	19	Introduction to Matplotlib and Seaborn		
	20	Basic Plotting and Customization with Matplotlib		
	21	Basic Plotting and Statistical Visualization with Seaborn		
	22	Other Visualization Libraries – Case Studies		
		Practical's	**30**	
	1	a) Write a program to calculate compound interest when principal, rate and number of periods are given b) Read name, address, email and phone number of a person through keyboard and print the details		
	2	Write a program to check whether the given input is digit or lowercase character or uppercase character or a special character (use 'if-else-if' ladder)		
	3	a) Print the below triangle using for loop. 5 4 4 3 3 3 2 2 2 2 1 1 1 1 1 b) Python Program to Print the Fibonacci sequence using while loop		
	4	Python program to print all prime numbers in a given interval (use break)		
	5	Write a function called GCD that takes parameters a and b and returns their greatest common divisor		

	6	Write a function called palindrome that takes a string argument and returns True if it is a palindrome and False otherwise. Remember that you can use the built-in function len to check the length of a string		
	7	Define a new class called Circle with appropriate attributes and instantiate a few Circle objects. Write a function called draw_circle that draws circles on the canvas		
	8	Write a python program that defines a matrix and prints		
	9	Write a python program to perform addition of two square matrices		
	10	Python program to perform read and write operations on a file.		
	11	Use the structure of exception handling all general-purpose exceptions		
	12	Write a Python program that calculates basic statistics measures using NumPy		
	13	Create a CSV file named sales_data.csv, which contains sales data for a company. The file has the following columns: Date, Product, Units Sold, and Revenue. Write a Python program using Pandas to perform the following tasks: a) Read the data from the CSV file into a DataFrame. b) Calculate the total revenue generated by each product. c) Determine the total units sold for each product. d) Find the date with the highest revenue. e) Plot a bar chart showing the total revenue generated by each product.		

	14	Create a CSV file named student_grades.csv, which contains the grades of students in different subjects. The file has the following columns: Student_ID, Maths, Science, English, and History. Write a Python program using Matplotlib to perform the following tasks: a) Read the data from the CSV file into a DataFrame. b) Calculate the average score for each subject. c) Plot a bar chart showing the average scores for each subject. d) Plot a histogram showing the distribution of scores in Maths.		
	15	Visualizing Titanic Dataset You are given a dataset containing information about passengers on the Titanic, including their survival status, age, sex, class, and fare. Write a Python program using Seaborn to perform the following tasks: a) Load the Titanic dataset into a DataFrame. b) Plot a count plot to visualize the number of passengers in each class. c) Plot a bar plot to visualize the survival rate of passengers based on their class and sex. d) Plot a heatmap to visualize the correlation matrix of numerical features (e.g., age, fare, and survival status).

Detailed Syllabus:

Module	Unit	Content	Hrs (45 +30)	Ext. Marks (70)
I		**Introduction to Machine Learning**	10	Min.15
	1	Introduction: Machine Learning - Machine Learning Foundations		
	2	Machine Learning Paradigms- Supervised, Unsupervised, Reinforcement		
	3	Applications of Machine Learning, Case studies		
	4	Basics of parameter estimation - maximum likelihood estimation (MLE) and maximum a posteriori Estimation (MAP).		
	5	Introduction to Bayesian formulation.		
II		**Supervised Learning & SVM**	14	Min.15
	6	Regression – Simple Linear regression and Multiple Linear Regression		
	7	Gradient Descent algorithm and Matrix method, Overfitting in regression.		
	8	Methods for Classification- Logistic regression, Naive Bayes, Decision tree algorithm- ID3		
	9	SVM - Introduction, Maximum Margin Classification, Mathematics behind Maximum Margin Classification		
	10	Maximum Margin linear separators, soft margin SVM classifier, non-linear SVM		
	11	Kernels for learning non-linear functions, polynomial kernel, Radial Basis Function (RBF)		
		Performance Measures & Unsupervised Learning		
	12	Regression Evaluation Metrics – Mean Absolute Error (MAE), Mean Squared Error (MSE), Root Mean Squared Error (RMSE), R-squared (Coefficient of Determination)		

III	13	Classification Evaluation Metrics - Precision, Recall, Accuracy, F-Measure, Receiver Operating Characteristic Curve (ROC), Area Under Curve (AUC)	11	Min.15
	14	Bootstrapping, Cross Validation, Ensemble methods, Bias-Variance decomposition.		
	15	Clustering - Similarity measures, Hierarchical Agglomerative Clustering, K-means partitional clustering		
	16	Expectation maximization (EM) for soft clustering		
	17	Dimensionality reduction –Principal Component Analysis, t-Distributed Stochastic Neighbour Embedding (t-SNE)		
IV		**Introduction to Advanced Machine Learning**	10	Min.15
	18	Introduction to Reinforcement Learning, Learning Task		
	19	Learning Models for Reinforcement – (Markov Decision process, Q Learning - Q Learning function, Q Learning Algorithm), Application of Reinforcement Learning		
	20	Introduction to Neural Network, Perceptron, Multilayer feed forward network,		
	21	Activation functions (Sigmoid, ReLU, Tanh), Back - propagation algorithm.		
	22	Case Study: Applying Reinforcement Learning in Autonomous Vehicle Navigation Case Study: Predicting Customer Churn in Telecommunications Industry using Neural Networks		
		Practical's	30	
	1	Create a dataset containing measurements of the heights of students in a class. Estimate the parameters of a normal distribution that best describes the distribution of heights using Maximum Likelihood Estimation (MLE)		

	2	The probability that it is Friday and that a student is absent is 3 %. Since there are 5 school days in a week, the probability that it is Friday is 20 %. What is the probability that a student is absent given that today is Friday? Apply Baye’s rule in python to get the result		
	3	Implement Simple Linear regression using python		
	4	Implement Multiple Linear regression using python		
	5	Implement the Logistic regression algorithm		
	6	Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets		
	7	Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.		
	8	Create a dataset containing information about the prices of houses in a certain city. The dataset includes various features such as the size of the house, number of bedrooms, location, and age of the house, as well as the corresponding sale prices. Your task is to build a regression model to predict the sale price of houses based on their features and evaluate the model's performance using appropriate evaluation metrics (MAE, MSE, RMSE, R-squared)		
	9	Implement the support vector machine algorithm		
	10	Create a dataset containing information about customers of a telecommunications company. The dataset includes features such as customer demographics, service usage, and contract details, as well as a binary target variable indicating whether each customer churned (1) or not (0). Your task is to build a classification model to predict customer churn based on the available features. Evaluate the trained model's performance on the testing data using the following evaluation metrics: Accuracy, Precision, Recall, F1-score and ROC Curve. Use SVM Classification		
	11	Program to implement K-Means clustering Algorithm		

	12	Create dataset containing information about customers of a retail store, including features such as age, income, and spending score. Your task is to perform clustering on the dataset to identify distinct groups of customers based on their purchasing behaviour. Use K-means Algorithm		
	13	Implement Dimensionality reduction using Principal Component Analysis (PCA) method		
	14	Implementing a simple reinforcement learning algorithm		
	15	Create a dataset containing information about patients with diabetes, including features such as age, BMI, blood pressure, and glucose levels, as well as an indication of whether each patient has diabetes or not. Your task is to build a simple neural network classifier to predict whether a patient has diabetes based on their features

	21	Case study – Explore Diamond dataset for prize prediction		
	22	Applied Analytics – HR, Finance & Marketing, Case studies		
		Practical's	**30**	
	1	Write a R program to take input from user (name, age, occupation, salary) and display the values with datatypes. Also print version of R installation.		
	2	Write a R program to calculate the sum of numbers from 1 to 10.		
	3	Write a R Program to create a list containing a vector, a matrix and a list and write a code for the following. 1) Give names to the elements in the list 2) Add element at the end of the list 3) Remove the second element		

	4	R program to create a data frame of student with four given vectors and write a code 1) to get the structure of a given data frame. 2) to get the statistical summary and nature of the data of a given data frame. 3) to extract specific column from a data frame using column name. 4) to extract first two rows from a given data frame. 5) to extract 3rd and 5th rows with 1st and 3rd columns from a given data frame. 6) to add a new column in a given data frame. 7) to add new row(s) to an existing data frame. 8) to drop column(s) by name from a given data frame. 9) to drop row(s) by number from a given data frame. a) 10) to extract the records whose grade is greater than 9
	5	Write a R program to find biggest of 3 number (if -else)
	6	Write a R program to find sum of elements of vector and to find minimum and maximum elements of vector (loop)
	7	Write a R program to Import a CSV file named 'data.csv' into a data frame named 'data_df'. a) Display the structure of the 'data_df' data frame using the 'str()' function. b) Print the first few rows of the data frame to inspect the data using the 'head()' function. c) Calculate summary statistics (mean, median, min, max) for numerical variables in the data frame using the 'summary()' function.

	8	Write a Program in R for Missing value imputation 1) Load the 'iris' dataset into a data frame named 'iris_df'. 2) Introduce missing values into the 'iris_df' dataset by randomly replacing a certain percentage of values with NA. 3) Display the summary of missing values in the dataset using the 'is.na()' and 'colSums()' functions. 4) Impute missing values in the dataset using a simple technique (e.g., replacing missing values with the mean or median of the corresponding column). 5) Verify that there are no missing values remaining in the dataset after imputation. 6) Compare summary statistics (mean, median, min, max) of the dataset before and after missing value imputation.
	9	Import a dataset from a CSV file and use dplyr to filter rows based on a condition.
	10	Write a R Program to print data in different graph formats (Histogram, Pie, Bar, Boxplot, Scatterplot)
	11	Write a R program to visualize different plot using ggplot 1) Load the 'iris' dataset into a data frame named 'iris_df'. 2) Create a scatter plot of 'Sepal.Length' against 'Sepal.Width' with points colored by 'Species'. 3) Generate a box plot of 'Petal.Length' for each 'Species'. 4) Create a histogram of 'Sepal.Length' with customized bin widths and colors. 5) Generate a density plot of 'Petal.Width' for each 'Species' overlaid on the same plot. 6) Create a bar plot showing the count of each 'Species' in the dataset. 7) Generate a violin plot of 'Petal.Length' for each 'Species' with custom fill colors. 8) Create a line plot showing the trend of 'Sepal.Length' over 'Petal.Length' for each 'Species'. 9) Combine multiple plots into a single visualization using facets based on 'Species'. 10) Customize the appearance of the plots by adding titles, axis labels, legends, and adjusting plot aesthetics (e.g., colors, transparency).
	12	Write a Program to find mean, median, standard deviation and variance

	13	The heights of 6 randomly chosen sailors are 63,65,68,69,71,72 inches. Those of 10 randomly chosen soldiers are 61,62,65,66,69,69,70,71,72,73 inches. Discuss whether this data gives a suggestion that the sailors are taller than soldiers. Aim: To test the claim that sailors are taller than soldiers (t-test)		
	14	Write a R Program to Apply Simple Linear Regression and Multiple Linear Regression		
	15	Write a R Program to Apply K-means clustering algorithm to the data and visualize the clusters.

I		**Introduction to Data Mining**	**8**	**Min 15**
	1	Data Warehousing - Data warehousing architecture, Warehouse Schema, Data warehouse backend process, Multidimensional Data Model		
	2	OLAP Operations, Introduction to KDD process, Data mining		
	3	Data mining Functionalities, Classification of Data Mining Systems.		
	4	Data Warehousing Case Study: Government, Tourism and Industry		
	5	Data Preprocessing - Data Cleaning, Data Integration and Transformation, Data Reduction, Data discretization		
II		**Association Analysis**	**7**	**Min 15**
	6	Association Analysis - Basic Concepts, Frequent Item set Mining Methods: Apriori Algorithm, generating association Rules from Frequent Item sets, Improving the Efficiency of Apriori.		
	7	Evaluation of Association Patterns, Visualization, Partition algorithm A Case Study on Association using Orange Tool		
	8	Dynamic Item set Counting algorithm- FP-tree growth algorithm-Incremental Algorithm-Border algorithm		
III		**Classification & Prediction**	**14**	**Min 15**
	9	Classification Technique: Introduction, Decision Trees: Tree Construction Principle – Attribute Selection measure – Tree Pruning - Decision Tree construction Algorithm – CART – ID3		
	10	Bayesian Classification: Bayes' theorem, Naïve Bayesian Classification		
	11	K- Nearest Neighbour Classifiers, Support Vector Machine. Evaluating the performance of a Classifier, Methods for comparing classifiers, Visualization		
	12	Case Study of Classification using Orange Tool		

	13	Linear Regression, Nonlinear Regression, Other Regression-Based Methods		
IV		**Clustering**	**16**	**Min 15**
	14	Clustering techniques: Data Attribute Types – Data Similarity and Dissimilarity		
	15	Partitioning Methods: k-Means and k- Medoids, CLARANS		
	16	Hierarchical Method: Agglomerative and Divisive Hierarchical Clustering		
	17	Density-based Clustering - DBSCAN, Grid based clustering-STING		
	18	Evaluation of Clustering Method		
	19	Case Study of Clustering using Orange Tool		
	20	Introduction to Web Mining - Basic concepts, Web content mining, Web structure mining, Web usage mining		
	21	Introduction to Text mining, Text Preprocessing, Text clustering		
	22	Case Study – Web Mining: Analysing User Behaviour on E-commerce Website Case Study - Sentiment Analysis of Customer Reviews

IV		**Introduction to Tableau**	**12**	**Min.15**
	17	Environment Setup, Design flow, Data Types, File Types		
	18	Data Source - Custom Data View, Extracting Data, Field operations, Metadata, Data Joining and Blending		
	19	Worksheets- Adding, renaming, reordering Worksheet, Workbook Calculations		
	20	Sort and Filters- Sorting, Quick filtering, Context filtering, Condition filtering, Filter operations		
	21	Tableau Charts – Bar Chart, Line Chart, Multiple Measure Line Chart, Pie Chart		
	22	Scatter Plot, Bubble Chart, Bullet Graph, Box Plot, Dashboard – Formatting – Forecasting – Trend Lines		
		Practical's using R	**30**	
	1	Exploring Data with Basic Plots • Load a dataset (e.g., Iris dataset) into R. • Create scatter plots, histograms, and box plots to explore the distribution of variables. • Label axes, add titles, and customize colors and styles		
	2	Visualizing Relationships • Choose a dataset with multiple variables. • Create scatter plots to visualize relationships between pairs of variables. • Use color or shape to represent categorical variables. • Analyze patterns and correlations in the data		

	3	Time Series Visualization · Load a time series dataset (e.g., stock prices, weather data) into R. · Create line plots to visualize trends and fluctuations over time. · Use different line styles or colors to represent multiple time series. · Add labels, titles, and annotations to the plot		
	4	Bar and Pie Charts: · Load a dataset with categorical variables (e.g., survey responses, product categories). · Create bar charts and pie charts to visualize the distribution of categories. · Customize the appearance of the charts (e.g., colors, labels, legends).		
	5	Heatmaps and Correlation Plots: · Load a dataset with numerical variables (e.g., correlation matrix). · Create heatmaps to visualize correlations between variables. · Customize the color scheme and add annotations to the heatmap. · Interpret the patterns of correlation in the data		
	6	Box Plots and Violin Plots: · Load a dataset with numerical and categorical variables (e.g., Iris dataset). · Create box plots and violin plots to visualize the distribution of numerical variables across different categories. · Compare the use of box plots and violin plots for data visualization		

	7	Interactive Visualizations with ggplot2 and Shiny: • Create interactive plots using ggplot2 and Shiny. • Design a Shiny app with interactive controls (e.g., sliders, checkboxes) to explore different aspects of the data.		
	8	Geospatial Visualization: • Load a dataset with geographical information (e.g., map coordinates, regions). • Create maps using packages like ggmap, leaflet, or tmap to visualize spatial data. • Add layers, markers, and tooltips to the map to provide additional information		
	9	Faceted Plots: • Load a dataset with multiple groups or categories. • Create faceted plots using ggplot2 to display subsets of the data in separate panels. • Customize the appearance of each panel (e.g., axis limits, labels, titles		
	10	Network Visualization: • Load a dataset representing a network or graph (e.g., social network, co-authorship network). • Create network visualizations using packages like igraph or networkD3. • Customize the layout, node colors, and edge weights to convey information about the network structure.		
	11	Word Clouds and Text Visualization: • Load a dataset containing text data (e.g., tweets, reviews). • Create word clouds to visualize word frequency and importance. • Customize the appearance of the word cloud (e.g., colors, fonts, word sizes).		

	12	Dashboards with Plotly and Shiny: • Design an interactive dashboard using Plotly and Shiny. • Incorporate interactive plots, tables, and controls to explore and analyze data dynamically.		
	13	Dynamic Visualizations • Load a dataset with time-varying data (e.g., stock prices, sensor readings). • Create animated plots using package plotly. • Customize the animation settings (e.g., frame rate, transition effects) to enhance data visualization.		
	14	Visualizing Hierarchical Data • Load a dataset with hierarchical or nested structure (e.g., organizational hierarchy, file directories). • Create tree maps, dendrograms, or sunburst plots to visualize hierarchical data structures. • Customize the appearance of the plots to highlight different levels of hierarchy.		
	15	Dashboard Design • Design a dashboard layout with multiple visualizations and interactive components. • Arrange the visualizations in a coherent and informative manner. • Add text annotations, titles, and summaries to provide context and insights.

Pre-requisites	Basic Idea of Functions, Limits and Continuity				
Course Summary	This course covers fundamental concepts in calculus: It begins with introducing the idea of tangent lines, rates of change, and the derivative, illustrating their application in describing motion and finding instantaneous rates of change. Basic rules of differentiation, including the product, quotient, and power rules, as well as techniques for finding higher-order derivatives are discussed. It also covers related rates, differentials, extrema of functions, the mean value theorem, concavity, inflection points, curve sketching, indefinite and definite integrals, integration by substitution, and the geometric interpretation of the definite integral. These sections explore various calculus techniques for analysing functions, determining areas under curves, and solving real-world problems.

Course Summary	This course covers a range of topics. It starts with introducing fundamental terminology and methods for solving differential equations, including separable equations, linear equations, exact equations, and equations with constant coefficients. Then it proceeds into more specialized topics such as homogeneous linear equations with constant coefficients and Cauchy-Euler equations, providing methods for their solution. Laplace transforms, including their definition, properties, and applications in solving differential equations and transforming derivatives are explored. The course concludes with an introduction to vector spaces matrix theory the eigenvalue problem, Fourier series, and separable partial differential equations, providing a comprehensive foundation in advanced calculus and its applications to engineering and physics.

Pre-requisites	Set theory along with an understanding of the real number system.				
Course Summary	This course provides a foundational understanding of calculus concepts: From the beginning sections students learn about limits (including one-sided limits and limits at infinity), continuity (definitions and properties), and the intermediate value theorem. Modules II and III cover differentiation techniques, including tangent lines, the definition of derivatives, rules of differentiation (product, quotient, chain), implicit differentiation, and advanced topics like L'Hopital's Rule for indeterminate forms. Module IV focuses on the analysis of functions, discussing concepts such as increasing/decreasing functions, concavity, inflection points, and techniques for identifying relative extrema and graphing polynomials.

Course Summary	This course provides a comprehensive exploration of calculus and its applications: It begins with fundamental concepts of graphs, linear models, inverse functions, laying the groundwork for calculus. Modules II and III delve into differentiation techniques, including product and quotient rules, implicit differentiation, derivatives of inverse functions, and applications like extrema, theorems (such as Rolle's and Mean Value Theorems), and curve sketching. Module IV explores integral calculus, covering the fundamental theorem of calculus, numerical integration techniques (like the Trapezoidal Rule and Simpson's Rule), and introduces hyperbolic functions and their derivatives and integrals.

Academic Level	100 – 219

Course Details	Credit	Lecture/Tutorial per week	Practicum per week	Total Hours
	4	4	-	60

Pre-requisites	Basic Calculus and familiarity with Real Number system.
Course Summary	This course covers fundamental topics in calculus and complex analysis, beginning with sequences and series in Module I, exploring convergence tests like the nth-term test, comparison tests, and alternating series. Module II delves into complex numbers and functions, discussing the arithmetic and geometric properties of complex numbers, along with polar and exponential forms. In Module III, the focus shifts to limits, continuity, and differentiability of complex functions, including the Cauchy-Riemann equations and harmonic functions. Finally, Module IV introduces counting principles, including permutations, combinations, the pigeonhole principle, and basic elements of probability.

Course Outcomes (CO):

Course Summary	This course comprises four main modules: Lattice, Boolean Algebra, System of Equations, and Eigenvalue and Eigenvectors. Module I introduce concepts like ordered sets and lattices, while Module II explores Boolean Algebra and its applications. Module III covers linear systems of equations, including Gauss elimination and determinants. Finally, Module IV delves into Eigenvalue and Eigenvectors, offering insights into matrix properties and applications.

Course Summary	This course examines the causes, effects, and measures of income inequality, including its measurement using tools like the Lorenz curve and Gini ratio. It explores calculus of several variables, focusing on directional derivatives, gradients, and optimization techniques, both constrained and unconstrained, with applications in economic contexts such as profit maximization and monopolistic practices. Additionally, the course covers input-output analysis, introducing technological coefficient matrices and models to analyse economic equilibrium and production functions.

Pre-requisites	Higher Secondary Mathematics			
Course Summary	This course covers differential and difference equations and their economic applications. It explores production functions, including the law of variable proportions, isoquants, and optimization of Cobb-Douglas and CES functions. Additionally, it introduces econometrics, focusing on regression analysis and econometric methodology.			

Course Outcomes (CO):

Pre-requisites	Basic algebra of numbers, basic Calculus and basic proof techniques.			
Course Summary	This course discusses the concepts of complex numbers. Module-I discusses complex numbers and their properties, complex plane, polar form of complex numbers, powers and roots and sets points in the complex plane. Module-II discusses the complex functions, special power functions such as z^n and $z^{1/n}$. The third module includes the concepts of limits and continuity, Differentiability and analyticity, Cauchy Riemann equations and Harmonic conjugates. Module-IV discusses elementary functions such as Exponential functions, Logarithmic functions, Trigonometric and hyperbolic functions. Final module is an open ended part that includes linear mappings, reciprocal functions, Branch cuts and points, etc...

Pre-requisites	(1) Basic knowledge to start a desktop/laptop computer. (2) A basic course in calculus with an understanding of differential and integral calculus. (3) A basic course in matrix algebra (higher secondary level)				
Course Summary	This course introduces the fundamentals of Python with a focus towards mathematical programming. Getting started with Python, Various Interfaces, Variables, Modules, Loops, Lists, Tuples, Functions, Branching, Input and Output, Arrays and Plotting, Dictionaries and Strings and finally Classes and Object-Oriented Programming are introduced. Using the Python programming structure, an introduction to the advanced mathematics software SageMath is given in the last part of the course. Various practical problems making use of concepts from calculus and linear algebra are to be solved using the SageMath software in the open-ended practical part so that the students will come to know how to apply software to answer and compute typical problems from these subjects.

Module	**Unit**	**Content**	**Hrs (36+ 9)**	**Marks** **Ext: 50**
I		**Python Basics** (Text 1, Ch. 1, 2, 3, 4.)	**8**	**Min.10**
	1	Getting Started (Ch 1). Programming Simple Mathematics (Sec 2.1). Variables and Variable Types (Sec 2.2).		
	2	Formatting Text Output. Importing Modules. (Sec 2.3, 2.4).		
	3	Loops and Lists. Loops for Automating Repeated Tasks. Using Lists to Store Sequences of Data. (Sec 3.1, 3.2, 3.3).		
	4	Iterating over a List with a for Loop.. Nested Lists and List Slicing. (Sec 3.4, 3.5).		
	5	Tuples. (Sec 3.6)		
II		**Functions, Branching, I/O, Modules.**	**8**	Min 10
	6	Programming with Functions.. Function Arguments and Local Variables. Default Arguments and Doc Strings. (Sec 4.1, 4.2, 4.3)		
	7	If Tests for Branching the Program Flow. Functions as arguments to Functions. (Sec 4.4, 4.5)		
	8	Solving Equations with Python Functions. (Sec 4.6)		
	9	Writing Test Functions to Verify Programs (Sec 4.7).		
	10	User Input and Error Handling. Reading Input User Data. Reading Data from Files. Writing Data to Files. (Sections 5.1, 5.3, 5.4. Section 5.2 omitted).		
	11	Handling Errors in Programs. (Sec 5.5)		
	12	Making Modules. (Sec 5.6)		
III		**More Data Structures, Plotting**		

	(Text 1, Ch. 6, 7).		7	**Min 10**
	13	Arrays and Plotting. Numpy and Array Computing. Plotting Curves with Matplotlib. (Sec 6.1, 6.2)		
	14	Plotting Discontinuous and Piecewise Defined Functions. (Sec 6.3).		
	15	Dictionaries and Strings. Examples: A Dictionary for Polynomials, Reading File Data to a Dictionary. (Sec 7.1 7.2, 7.3),		
	16	String Manipulation (Sec 7.4).		
IV	**Classes and Object-Oriented Programming.** (Text 1, Ch. 9, 10.)		7	**Min 10**
	17	Basics of Classes. (Sec 8.1)		
	18	Protected Class Attributes, Special Methods. Example: Automatic Differentiation of Functions. (Sec 8.2, 8.3, 8.4).		
	19	Test Functions for Classes. Example: A Polynomial Class. (Sec 8.5, 8.6).		
	20	Class Hierarchies and Inheritance. Example: Classes for Numerical Differentiation, Integration. (Sec 9.1, 9.2, 9.3).		

V	**Practical (Open-Ended)** Lecturer's selections of 15 sessions of 2 hours each from below. **Miscellaneous Python Exercises** 1. Pitfalls of Programming, Text 1, Section 2.5. 2. Familiarize various Python runtime environments and IDEs like IDLE, Spyder, VS Code, Virtual Environments, Jupyter Notebook, Google Colab, Anaconda/Miniconda/Mamba, Replit. 3. Familiarize various documentation websites and how to refer to the syntax and implementation of a Python concept or Package. 4. Case studies from Reference 2:, Income Tax Calculator (page 38), Investment Report (p. 73), Approximating Square Roots. (p. 92), Text Analysis (p. 126), Generating Sentences (p. 150). **Sagemath** 1. Getting and installing sagemath in Windows, Ubuntu OS Using sagemath using cocalc (online). 2. Using Sage as a Calculator, Using Sage with Common Functions, Using Sage for Trigonometry (Text 2, sections 1.1, 1.2, 1.3). 3. Using Sage to Manipulate Polynomials (Text 2, section 1.7) 4. Matrices and Sage-A First Taste of Matrices, Doing the RREF in Sage (Text 2, section 1.5) 5. Using Sage for 2-D graphs (Text 2, section 1.4) 6. The Derivative, Slope of Tangent, Higher-Order Derivatives (Text 2, section 1.11)) 7. Antiderivatives (Indefinite Integral), Definite Integrals, Improper Integrals (Text 2, sec 1.12, upto sec 1.12.6)) **Sympy (Reference 3).** 1. Sympy Introductory Tutorial. 2. Solve an equation algebraically. 3. Solve a system of equations algebraically. 4. Solve one or a system of equations numerically. 5. Find the roots of a polynomial symbolically or numerically. 6. Solve a matrix equation algebraically. 7. Solve a Diophantine equation algebraically. 8. Solve an ODE algebraically. **More Numpy and Data Visualization** (Reference 1: Chapter 3, 4) 1. Numpy Functions: arange, linspace, zeros, ones, random.random, reshaping. (Sec 3.1.1 to 3.1.6). Copying, Saving and Restoring, Slicing, Arithmetic Operations. (Sec 3.1.7 to 3.1.10). 2. Matplotlib Module: 2D Plots, Polar Plots, Pie Charts, Multiple Plots. (Sec 4.1) 3. Sine function and friends, Circle, Parametric Plots, Error Bars. (Sec 4.2)

4. Simple 2D Animation (Reference 1, Section 4.4), Making a movie of a Plot (Text 1, Section 4.4)
5. Famous Curves: Astroids, Ellipse, Spirals of Archimedes and Fermat (Reference 1, Sec 4.5)
6. 2D Plots and Fractals (Reference 1, Section 4.6)
7. 3D Plots (Reference 1, Section 4.7)

Numerical methods using SageMath (Reference 5: Chapter 7)(7.1 - 7.10, 7.12)

1) Evaluate a Taylor series numerically.
2) Interpolate a function using
   a) Newton's forward interpolation.

   b) Newton's backward interpolation.

   c) Lagrange's Interpolation.

   d) Newton's General Interpolation.

3) Find integral of function using
   a. Trapezoidal Rule
   b. Simpson's 1/3-rule

4) Find derivative of function numerically.

5) Solve first order differential equations numerically.

   a) Euler method

   b) Fourth order Runge-Kutta method

6) Solve algebraic equations numerically.

   a) The Bisection method

   b) Regula Falsi Method
